Great radio...

Not that rare... I used to be a Dealers Factory Repair Station for CPI.
Well made radio, hard for many techs to work on right. The 300 and 400
are very similar. I picked up a used 300 at a flea mkt for $5 the other
day. Couldn't turn it down...

cheers

From: Railroader <TBanks@fox-net.net>
Message-ID: <3b16ec10_4@Newsfeeds.com>
Source record: 84037

When I dissconnect coax for the radio the noise goes away, when connected
can also hear sound like the driveshaft starting to turn when starting out,
I have antenna mounted on the front of the pickup bed, with a riser, that
elevates it a foot or so, and have the mount grounded to the frame. It
doesn't appear to be alternator noise, more like electronic ignition
noise.??????????

What's your beef? Hollywood rewrites history and Europe gives us 'reality
television' with acid-tongued hostesses, couples chained together or
imprisoned in a loft.

Pearl Harbor, better known among critics as Bora, Bora, Bora or Snora,
Snora, Snora, spends 40 minutes out of three hours actually attacking the
place and spends more money than Yamamoto spent. Incidentally, the plan was
lifted from an exercise conducted by Admiral William Halsey; he showed and
the Japanese proved that if you attack the US Navy do it on Sunday morning
when everyone is either drunk, hung over, or shacked up and the people left
behind wouldn't know whether to have sex or expect rain.

As a history rewrite, BBB comes nowhere near an old Randolph Scott western
that had people who weren't even alive at the same time riding into town.

Yes, I am sure you have provided a explanation, how can anyone but you be responsible. The posts were parts of threads long ago, are you going to try and Blame Doug or whomever the Anti Keyclowns are for doing it. What is San fran known for ? Gay Capital USA, Uh Sharky come on do you think we were born last nite.But, I have a problem with you lieing. truthfully I could care less if you think a mans hairy ass and ball sack would look good on your chin. But someone digs up some dirt on you and Well you know the rest.

> I just want to know, why are you guys so
> concerned with someone sexuality?
==========
Who are you guys? I am not part of any clubs or secret associations. Why am I lumped with you guys.? The only 2 guys who I am presently arguing with is yourself and twitsie, I don't play the Fag game like doug and Co does with you guys. Why are you so concerned that you wouldnt admit the truth instead of tap dancing around it. What are your theorys on how they got there 3 years ago? Mark Fuller maybe, oh I forgot you answered them via e-mail with the :wink: wink: the Fellas.

I mean,

Nope, it is pure hype to make idiots think they are getting a high efficient class c amp when the amp is more class b than c, it is just barely at cutoff. To get the efficiency normally associated with class c you have to bias it well beyond cutoff. It is just more hogwash cb hype, period.

If this "explanation" is so indisputably exonerating (and accepted by all who it is presented to) --- then why not silence your critics and post it for everyone to see?

The answer: because it, like your other excuses, are pure bullshit. The truth is that there was no 'conspiracy' 5 years ago that ran amok for 3 years posting in your name using your ISP. It was you, Landshark.

Yep, they plainly state they are for CW, FM and Phase Modulation, which
is what a true class c amp is perfectly good for. Nothing is said about
AM, no hype here. The only way to use a high efficient true class c amp
with AM is with high level (plate/collector) modulation.

Why must you clowns insist on listing bootleg ham gear for sale in a CB group? This overpowered rig can only add to the illegal chaos on CB. And why must Cbers own radios capable of transmitting outside of the legal 40, and even on ham bands? No reason, other than stupidity - and the greed of the seller. Be gone, infidel.

Hello Again Pro,
Well, again, I don't care what you
or those other "Guys" think.
I did not do those posts, yes they
came form my terminal, no Doug or Mark
didn't do it. So you and everyone else can
think what they want, I will not explain it
to you or anyone else in any public forum.
You have asked if my wife knows, yes she
does and she knows who too, so what
ever you want to think, no sweat.....

Landshark

Yep, they sure are, with FM, CW and Phase modulation, and even in AM
using plate or collector (high level) modulation. But nowhere will you
see anyone, except on cb, try to tell you to push an AM or SSB through a
class c amp that is biased well beyond cutoff as a true class c amp is.
Class c by definition is non-linear.

I just think its bad when people think they have to use a thousand watts to talk across town. Especially when this town isn't that big. I can understand tuning a radio to get a few more watts but as much as these guys pump out, its completely useless. A couple of them only use it to bleed channel 19 and to go on 19 and just screw with the truckers. Thats the point that I don't understand. As for splatter...I never hear anyone on the radio complaining about their neighbors complaining. My radio is legal and I still bleed my neighboor's phone.

False. The higher reliability of the components in a given design, the higher the reliability of the product. The space shuttle is probably one of the most complicated and reliable pieces of junk around. And while that thing is flying around in space, I'm busy changing lightbulbs. Did ya ever notice that automobile headlights hardly ever burn out, but household bulbs don't last 6 months? By your logic, that lightbulb must be much more complicated in design than the space shuttle.

I'd rather spend my money on something a little more worth while than marijuana. I like to remember my life and what I do. And when I did smoke weed, all it did was started to ruin my life...went broke very fast, almost lost my job, lost friends cuz I wasn't me anymore. So I stopped and my pothead friends kept trying to shove weed on me and kept refusing so they stopped being my friend. So I said fuck it they aren't worth it and continued my hobby.

Well hell, let's just toss them out on the street as soon as they can
walk, and if they survive they will have a better life.

Tell ya what: you go ahead and ignore society as much as you want,
that's fine with me because you won't be influencing anyone with your
fucked-up attitude. But don't sit there on your pom-puss ass and give
-me- a ration of shit about how misguided kids are nothing but "punks"
or "animals."

I spend time to help to facilitate an environment where they can make
decisions that won't land them in jail or the emergency room. CB radio
and electronics are just hobbies that a few of them took an interest
in, and it's far better than shooting up drugs, poking bullet-holes in
houses or neighbors, or getting perforated by someone else just for
wearing the wrong clothes. So unless that is your idea of how these
kids should learn the lessons of life, shut the fuck up.

Outstanding! I mean it! Sometimes it takes real balls to do what you
know is best for yourself, even if it means giving up something else
in the process. Did get much support from other CBers, or did they
criticize the choice you made?

You might be able to fix that by having your shop turn down your
modulation a bit. If you are not the original owner of your radio, the
modulation limiter might be disabled, and getting that fixed will also
help. There are other causes of bleeding, but that is a good place to
start.

Spaky,

yeah I got quite a bit of support out of pretty much everyone. There were a few that didn't like how I bad talked potheads but thats alright. Hell, they stopped talking to me cuz I wouldn't toke up with them.
I know it takes balls...you're not kiddin. It was hard though. Its as addictive as smoking cigs (which i started to get me away from drugs). I just knew I had to turn around. I would smoke every nite, wake up, go to school still stoned, sleep in class. The guys on the CB are pretty proud of me for becoming what I am and what I have now...a girlfriend that I am marrying soon, a job at UPS and Frito Lay, a more respectable and respectful person. There is only one thing that bothers me about quitting and thats that I don't have any friends....but whatever it takes to get away from that bullshit.

Brian

Brian,

This has nothing to do with his alleged homo/bisexual posts. Sharky is
a lying hypocrite. He flames others, but when they flame back he cries
to their ISP and tries to get them booted. He criticizes others for
their use of profanity, but he allows himself the use of "colorful
metaphors" in his posts. He is also an admitted radio pirate, and
claims to have scores of amps and illegally modified radios while
admitting that he is not a ham.

He's not worth the effort.

The more parts the more increase of odds of failure, period. Can you tell the difference between a class C and B with a scope or spectrum analyzer? yes. Can you tell with a naked ear? I dont think so. Do the majority of CBers have loads of cash for sophisticated equipment? no, Do the majority of hams that do have money use all the bells and whistles and extra frequencies that there radio comes with? No, otherwise they wouldn't be here on a CB reflector :)

>The more parts the more increase of odds of failure, period.

Well there is a shitload of real-world examples that beat those odds
daily. Did you ever hear of the phrase, "the chain is only as strong
as the weakest link"? That's because reliability is based upon the
least reliable component, NOT the total number of components.

> Can you tell
>the difference between a class C and B with a scope or spectrum analyzer?
>yes. Can you tell with a naked ear? I don't think so.

Yes, because a Class-C amp used in place of a linear distorts like
hell. Of course the person transmitting won't be able to tell, so why
should he care?

> Do the majority of
>CBers have loads of cash for sophisticated equipment? no,

That doesn't matter at all. Why?

1) It's illegal, so a CBer shouldn't be messing with it in the first
place.
2) The FCC didn't write the CB regs in consideration of the income of
the average illegal CBer.
3) A properly designed amp isn't expensive, and Griffey would only
need to add ONE RESISTOR to make the thing work halfways decent. But I
guess that would increase the reliability factor beyond the threshold,
huh? And he would have to lose that "Class-C" sales pitch.

> Do the majority of
>hams that do have money use all the bells and whistles and extra frequencies
>that there radio comes with? No, otherwise they wouldn't be here on a CB

Guess how much a tank costs? Hint: it has only three components.
That's right, it's cheap. Even for that ham that doesn't want to spend
a lot of money. And with only three components, what's the reliability
threshold? Too high? Too bad.

Go away, you don't know what you or the rest of us are talking about.

That amp is worth a 2026. A 100 watt amp is not going to touch a 2006.

Greetings!

Try listening to SSB when they turn on a Class-C amp.

When the fuzziness is over, you'll hear what I mean.

As far as simplicity, yes, fewer parts. Doesn't mean SOA or MTBF is
increased - in fact, you can overdrive it and there goes the concept.

Class C or Class E amps are more like pulse amps. Trying to get one to
operate linearly takes it out of the class and into "distorted
crossover Class-B" operation.

Due to the "duty cycle" and overall waveform - Class C CAN be heard.
You may or may not be able to understand the audio. But you can hear a
class-C amp trying to operate linearly, keyword: Trying

Drop the semantics, my point is valid. Reliability is based upon the weakest component. And if, as your implication would imply, the components are similar between the amps, my point is no less valid. However, if the design is different, then the stresses on the components will be different as well, and your implication is meaningless.

>By the way... Sparks means to me... a person who is very poor at
>electronics and short circuits quite often. How is it you came branded
>with that "handle"?

Hmm..., since you like to imply more than you will say directly, I am left to wonder what you are trying to imply with the statement which precedes the question, as well as the question itself. Could it be that you are attempting to discredit me because of the name I use on Usenet? Nah, that would be too transparent. Perhaps the term 'branded' is to imply that my choice was not voluntary. No, I don't think so.

But wait! Could it be that you are making a deliberate attempt to attack my character in order to divert my attention away from the realities of your flawed design and marketing misrepresentations? By golly, that must be it!!! And you said I wasn't very bright.

Nope, diamonds haven't been artificially produced for a century. The first diamonds were produced by GE back in the 40's and early 50's. These diamonds had a large amount of nitrogen in their lattices due to the nitrogen in the atmosphere. This turned these diamonds various tints of brown to almost black. There was a really big push to produce artificial diamonds because of our dependence on South Africa for all of our industrial diamonds. Most of the metal alloys used to produce munitions were so hard that only diamonds could reliably cut and shape them. It wasn't until much later, the 70's or so that real gem quality diamonds could be produced.

A class c amp cannot operate linearly, class c by definition is
non-linear and being non-linear, the output is signal is not a replica
of the input signal, thus distortion. A class c amp cannot even try to
operate linearly.

70. FS: Realistic TRC-212 40 ch Walkie-Talkie GOOD DEAL ! ! !!

Newsgroup: rec.radio.cb
Date: 2001-06-01 16:08:57 UTC
From: y@y.com
Message-ID: <3b17bdf6.179582205@news.seimac>
Source record: 84160

I have a Realistic TRC-212 (21-1662) for sale. This is the full size 40 channel unit with carrying case. High/low TX power switch. Around 5 watts output on high. LCD display with TX and receive meters. Great shape. Original long (around 5 feet) center loaded antenna. Has external antenna, power and charger connections. Has an 5-pin mic connector as well. Requires 8 'AA's or 10 'AA's rechargeables and you can recharge the batteries WITHOUT taking the batteries out.

Asking only $ 25.00 (US$) + shipping from Canada

Great deal ! ! !!
Sold for $149.95 US

A Picture can be e-mailed.

71. AM/FM/CB/Cassette

Newsgroup: rec.radio.cb
Date: 2001-06-01 16:13:37 UTC
From: Michael Willey <photog101@mailhost.det.ameritech.net>
Message-ID: <3B17BF30.8D45B0AC@mailhost.det.ameritech.net>
Source record: 84161

I am looking for an AM/FM/CB/Cassette Radio for my Motorcycle. As long as I had it I think that it was a Cobra model, but I can't really remember. I just had the one that was mounted in my Cyclesound housing stolen and need to find another. I have a spare cyclesound housing, I just need the radio. I have my helmets made up to accept this setup with external PTT switch for driver and co-rider as well as separate volume controls for both riders.
The thieves did not get the home made controls and thankfully did no damage other than the theft. Unfortunately my insurance policy will not cover this particular radio add-on since it is after market. I do find that there is now a rider that I can add to my policy that will cover this in the future.
Thanx in advance:
M:)

72. TRC-459 parts needed?

Newsgroup: rec.radio.cb

Hi there,
I have a TRC-459 thats missing the fast button for the clock, does
anyone have a TRC-459 that doesn't work for parts?..or sell me that
missing peice?..any ideas where I could find this part?
please respond to me directly....
Any help would be greatly appreciated!
Thanks-Russ

Well, there is one hell of a good way to settle the issue. Get a clean CB and put a two-tone test rig on it. Then bolt your amp to it and see what becomes of those two modulating tones on both a scope and a spectrum analyzer. Put the Polaroids on your site, we know if you're spoofing us. If you are right, think of the advertising; my guess is that you won't see the trace for all the buckshot.

Do the world a favor and stay away from Ohare.

Hello Web Doc: Whatever, sometimes ya can make and sometimes ya can't. The next weekend there was a keydown/break in Illinois, but someone put Indiana in-between Ohio and Illinois, some nerve!

So I didn't make the Illinois social function. Only been to a few keydowns and there also a blast! The different configurations that come out of the wood work are great to see. And most everyone is pretty up front as to how there systems run. The cold beer and BBQ's are great.

I hate when other things get in the way of my radio stuff.

Glad to hear your Mongoose 450 is ah hummin ok fer ya.

Maybe next year?

Jay in the Mojave

Hey Michael, you might try your local bike shops they often have radios like
you are looking for, and if you can't find one I have one here but am not
sure how well it works or if it will match your wiring harness.

I hope you aren't implying that you know much about electronics.
If so I am afraid you bit off a a little to much. Better count your
losses before you get to far behind.

For the US, look up www.fcc.gov, and work your way through the rules
and regs until you find Title 47 Part 15, which is here as well:

http://www.access.gpo.gov/nara/cfr/waisidx_00/47cfr15_00.html

For Australia or any other country, look up your respective
communication regulation agency.

I thought that was because of the imperfect crystallization of the
carbon falling out of solution from the iron? At least that what is
says in my book. What book are you reading?

He won't do it, for obvious reasons. That's why you won't see any true
specs listed with this amp. As soon as any advertised specs are
independantly evaluated, he would be subject to a class-action
lawsuit.

>Do the world a favor and stay away from Ohare.

My job only requires me to be present about 2 hours a day, but I'm on
call 24/7. The rest of the time I spend on my bench. I just picked up
a beautiful old tabletop from the mid 30's. The chassis is great, but
the box needs new lamination. The part that sux is chiseling off the
old stuff, so when I get bored I dust the splinters off the keyboard
and read twistie's posts -- always good for a chuckle.

Brian:

Nicotine is the second most addicting substance on this planet, right after cocaine. I put out my last cigarette on 11-8-96. The urge to smoke still happens occasionally. The urge passes quickly. Just ignore it.

The only way to quit...is cold turkey. Any other method just prolongs the actual "quit date". Just quit and be done with it. After you quit, you no longer smell like an ashtray, save over $3 a day and have all that time back that you wasted going outside on smoke breaks.

Mark:

Don't buy the schwag bag!

More than 30 seconds of listening to that crap on channel 6 can give a person brain damage. (Did you say you listened to it all day? Oops. Nuff said) Here's an idea. Can you come to the airport and pick us up?

>I'll be on the boat, but surely you can

137. Newbie questions about tuning

Newsgroup: rec.radio.cb
Date: 2001-06-02 02:17:57 UTC
From: Bob Wennerstrom <bobwenn@frontier.net>
Message-ID: <3B184CD5.B76E3AE@frontier.net>
Source record: 84277

I'm pretty new to this but I've been reading a lot and trying to learn. Today at the local swap meet a guy shows up in a motorhome with a little CB shop inside. I took my old Realistic TRC 422A over to him to get it "tuned up" He let me watch and I tried to remember what he did so I could learn something. He mostly fiddled with some plastic screwdrivers and he looked the modulaters numbers in a big book. I asked him if this "tuning" was going to increse the chances of me blowing the finals and he responded "no". He seemed pretty knowledgeable, did the tuning with a dummy load I think.He had an oscilliscope but didn't use it on my radio. He told me he turned up the amplitude so the signal would be stronger.

Any idea what this guy did? Am I putting a bigger load on the final transistors? The outgoing signal is much stronger now than it was before, according to the TX meter.

Thanks for all replies
Bob W

You may want to try your local Harley-Davidson shop. They have a unit that also works with an intercom for front to back, (no more yelling to your passenger). I don't know how well it works or how much they will sell it after market for but if it is for Harley it is usually very good.

Hi Bob,
A 'tune-up' generally means that the radios output and modulation has been increased. According to my book, he more than likely cut diodes D16 & D17, and then spread the L3 & L6 coils a little. This will cause the radio to be louder on transmit, and also have an increased power output. The bottom line is, you got what you wanted! Will it 'hurt' the finals???... more than likely, NO.

Really? Who made the accusation? I would like to know because that's
the first time I have heard anything of the sort. Are you trying to
toss out some fodder for those that have enough balls to stand up and
make the accusation? What's the basis of this accusation? Have you
spoken with any of these kids to find out the truth? Have you spoken
with any of the off-duty LEOs that supervise the center? I'm sure you
are aware that making such groundless allegations is very serious,
especially when it involves the welfare of minors.

Maybe you should just forward me the name of your attorney so we can
work this out in the proper venue.

This amp is now fully functional. The 4X150 was replaced with a 4CX250B, and the choke input power supply, was by passed for higher voltage on the plate, for more output power of course.

The old Mickey Mouse relay was replaced with a much better one, and will not arc over now. But the back light lights in the tuning indicator meter are burned out, I'll suffer thru this one. This amp is truly a collectors item.

It works great!

Oh by the way I didn't hear you on 145.800 MHz. And no one there wanted to spit in my face. Can you say chicken shit!

Last week I went to www.copper.com and ordered a free catalog.

I just picked it up from my P.O. box. It's full of export radios and noise toys and echo mikes and roger beeps and 2950's. Matter of fact, they are pushing a Mirage 2950 on the front cover for $200. The real RCI version is about $285.

I don't recommend anyone actually buying from Copper's after all the horror stories heard about them. There are many better places to get your stuff from. I prefer the local radio shop. Service after the sale, not BS over the phone is worth a few more dollars.

Instead of flooding the NG with porn and smut, go after Copper's. I'm sure their lawyers would think you're a good fighter.

Spare us the idiotic details, we asked you if it'd be used on 27 Mhz. Why
no answer?

>
>Oh by the way I didn't hear you on 145.800 MHz. And no one there wanted
>to spit in my face. Can you say chicken shit!

Sorry to hear you missed each other.

Did you page N8 or make any attempt to let him know your location or that
you were looking for him?

Did you wear a sign with your call on your back so he could find you? (oh,
sorry, you're too chickenshit to reveal that in the NG, let alone in public).

Since he was wearing his callsign, did you go looking for him?

Did you arrange to sked with N8 on 145.8 at a certain time?

>
>Jay in the Mojave

God only knows what he might have done to your radio, but he may simply have adjusted the meter to look like it was doing more. Put it on a low power watt meter and see if it is in spec. Almost anything he might do to 'improve' your radio will likely render it illegal to use, but it's your dime.

Bob Wennerstrom wrote:

> I'm sure their lawyers would think you're a good fighter.

H&Y Electrical is the real keyclown side of Copper Electronics.
They have a website and send catalogs just like Copper except
that H&Y handles the amps. H&Y provides all the same horrors
as Copper--and they make you pay yearly dues to boot.

Why would you want to listen to CB radio over the internet. Imagine
they hooked up the ch1 UHF repeater for Sydney to a web server.
I don't htink sitting and listening to a bunch of morons being just
that, morons would make it interesting listening myself.

Source record: 84240

I guess I should enjoy this NG now... because it gets worse every day. I can only imagine what it'll be like in a years time. When I first came to the group serveral years ago... about 80% of the posts were on the topic. Now, it appears we are currently around 10% and dropping. It's a shame that people have learned to get attention by outragous behavior here. I guess they feel like they're getting away with something. It must be a real thrill for them to tell people things they wouldn't dare to face to face. They are certainly entertained very easily...

>Kevin, WB5RUE

Kevin has a good point, ALL Earth rocks have been changed MANY,MANY
times over the 4.5 billion year life of the Earth. The materials are
the same age however. The only rocks that are basically unchanged is
meteorites but they of coarse are not from Earth. The very thin
outside fusion crust is the ONLY changed part of a meteorite, the
inside is exactly the same as when it formed. That can't be said of
any Earth rock. Brecciated meteorites may be the exception, due to
collisions between asteroids these appear broken up and then re-formed
but the different materials are the same.

I have a late model Dodge Ram QC 4x4 that I'll be putting a CB in shortly. As it is, it barely fits into my garage now, so any antenna that sticks up higher than the cab roof is going to be a problem. Can anyone tell me what, if any, my options are as far as an antenna that will still allow me to park inside my garage, without taking it down first? Am I going to be able to get decent performance out of any antenna that does work in this situation? Thanks!

Hello & Good Morning,
Do you have a shell on? If you don't
you can always use a full size antenna
and put a quick disconnect on to make
the removal of the antenna easier.

Assuming a 'rubber duckie' type antenna.... as bad or worse. Pop an outside
(magnetic?) on the cars and you'll do far better.

Also... most Walkie Talkies cost almost as much as a small under-dash
mobile, which will do a better job.

There's one on ebay right now. A friendly suggestion. If you can score the older President Madison with the 70's style clock, it's a better investment...worth considerably more. The radio section's the same as Uniden manufactured the President line. That still holds true today although the President "CB" line is no longer offered in the USA with FCC type certification. Hope that helps. Take care and 73.

Mark

Somehow this joker feels he is doing a service. The only thing you are really doing is offending a good many people. Some may indeed be using illegal equipment, however have you considered how many legal users you have offended with your topics and your language? There used to be kids on this group as well. If they still are I'm quite sure you feel proud of your offensive language on this group! And then you get mad when people want you to go away?? Why??? Who would want to be associated with a gutter mouth like you?

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't mean a THING if you ain't got that SWING!!!!!!!

Well, as you can see if you go back and read what I typed, I CLEARLY stated that I had NEVER used it myself, and that it MAY be interesting.. In the context that I used the word, it could mean just about anything. Interesting as in really dumb, real cool, totally off the wall, anything... Everyone has a different opinion as to what is interesting... Is was a very vague and general comment...

I was giving the guy what he wanted, nothing more, nothing less... I never asked for your opinion of the subject.. If you were looking to make such a reply, it should have been to HIM, not me, as HE was the one asking about such a sight.

227. Distance of CB Radio

Newsgroup: rec.radio.cb
Date: 2001-06-03 18:13:32 UTC
From: Gretchen Hummel <gretchenann@home.com>
Message-ID: <g7vS6.59082$%i7.45276130@news1.rdc1.sfba.home.com>
Source record: 84368

I'm going to move cross country and drive my 3 cars. I want to have some way to communicate with my other cars. I've looked at the family band radios but they only work for about 1/2 mile in a car. How far does a 5 watt CB walkie Talkie work in car with no outside antenna.
Craig

You are a hypocrite and a liar. If there were "kids" on the NG (other than
Tim Nebo etc.) they were CERTAINLY getting an earful of profanity from Landshark
and Chuckie and Pinhead and the other idiots. Nobody said a word about THEIR
language.

PLUS......these "kids" would have been getting a constant stream of "advice"
from the NG regulars about how to break the law and "fuck the FCC", "screw
the rules" etc. Apparently *that* was/is all OK with you.

Hypocrite.

Landshark

On the contrary Doug, I did got lots of e-mail
to that very fact. Also A warning from my then
ISP to not post subject lines that was offensive
in nature & off topic. Why do you think in the
past 2 years plus I have been on topic with only
an occasional out burst of profanity in the content
of the message, not in the subject line.
Ice, Professor, Prozac, Dave, Dave & Debby
and many others asked me to tone it down, and I did,
not completely, but enough that it doesn't bother
them anymore.

All the foul words used on this newsgroup in the past three years cannot hold a candle to the porn pictures you have posted. It is true that there is teenagers that frequent the group (or did at one time) and to think that the slime you have posted was seen by these teenagers. Regardless of what they chose to do with the radio hobby there decision did not deserve the filthy words and porn you have littered this NG with. You have probably done more damage with your computer than any CB amplifier could ever cause.

>> >No flames please..

Fine. And I gave you a simple answer, just like you asked. I didn't
flood, just like you asked. The answer was logical, just like you
asked but rarely practice yourself. The answer wasn't a flame, just
like you asked, but rarely practice yourself.

What was my answer?

>> Perhaps you should go back and read your own posts.

A very good answer. When you go back and look at your posts you would
see that very few of them are ever on-topic, more than half are flames
and trolls, and your language is worse than a whore on the rag. Then
you come here and do the same thing, at least until you join the crowd
condemning Doug for his language, then you present yourself as a
saint. Well, Saint Hypocrite, this is just the beginning...

>Perhaps N8WWM Doug,you'd be able to pull your head out of your ass(with
>sparkys help). Maybe Frank can re-hab you too.NAAA.. Those imaginary kids
>kids he helps(he's been accused of molesting them) make more sense than you
>Doug Adair.

I showed up at the center yesterday and was met by an attorney. Two
other people there read your post and freaked. The center was shut
down and some of the kids were interviewed. I spent half the evening
and most of the morning showing them my computer and your posts from
the past couple years. They finally realized that you are an
insignificant little troll that has nothing better to do than run your
trash mouth on the newsgroups. Despite that, it still left a mark on
my record, I can't work at the center anymore, and I can't work with

kids anywhere. Good fucking job, St. Hyporcrite, you took from me one of the important things in my life, and it was more important than you realize because I was working with kids because the only one I ever had died. But that doesn't matter to you, does it? I'm sure you think that all this is funny, and I hope you do. I wouldn't expect you do think anything else. In fact, nobody should ever expect you to behave like a normal person, to know when you have gone too far. I never accused anyone here of child molestation. I have never accused anyone here of anything they didn't admit. Where in the fuck do you get off suggesting such a thing when you know many people read these posts? Who in the fuck do you think you are? Oh, I forgot, you are Saint Hypocrite and you can do anything you tell others they shouldn't do. Well, we can work on that little problem. I have a month's vacation coming up at the end of the month, and I can think of no better way to start if of than with a Cleveland Indians game. You should be easy to spot -- you will be the one jerking off in the crowd while talking on your 100mW walkie-talkie.

==========
There are quite a few professional radio/electrical/electronic
engineers who contribute regularly to the antenna newsgroup. There
is also a varied selection of old-wives who insist on repeating
their continued-for-evermore plagiarisms.

>Interesting as in really dumb, real cool, totally off the wall, anything...

If any one thinks that something really dumb is interesting, specially
in reference to the morons on CB radio (not saying that that everyone
on CB is a moron) then some people have big problems, and should seek
help.

>Everyone has a different opinion as to what is interesting... Is was a very
>vague and general comment...

Yet, it was my opinion, and it was not directed at you PowerHouse, it
was directed at the formum in general, after all this is a public
forum, and all replies are directed at the header of the topic, unless
otherwise stated.
>
>I was giving the guy what he wanted, nothing more, nothing less... I never
>asked for your opinion of the subject..

I know you weren't asking, you don't have to, this is a public forum,
and everyone is entitled to their opinion, and it doesn't matter if
you agree with it or not, this goes under the topic of freedom of
speech. If you don't like this idea, go live in some surpressed middle
eastern country.

If you were looking to make such a
>reply, it should have been to HIM, not me, as HE was the one asking about
>such a sight.
Like I have already stated, it was directed to him as it is the topic
header, and I can't see where I put your name on the reply. Unlike
this one.

246. FS:Yaesu FT101EE station~11meters~

Newsgroup: rec.radio.cb
Date: 2001-06-04 00:37:19 UTC
From: jimmoci@aol.com
Message-ID: <20010603203719.07765.00002377@ng-fz1.aol.com>
Source record: 84306

For Sale- Yaesu 101EE with YC601 Freq Counter, Speaker/Phone Patch,
FV101B external VFO. Unit covers 26.5mhz-28mhz. The unit works well- it was
just repaired 6 months ago and fully aligned. The faceplate of the 101 has some
wear marks on the painted lettering, the Speaker Patch is in good shape, the
counter has a few scratches, and the VFO has a blemish on the model# tag. This
radio works great on all bands and the output tubes are at full. It's not the
prettiest 101EE- it does have a few nicks and scratches but it works very good.
$450 shipped.I will not split up the package unless someone buys the radio
first. I will sell the radio for $195 plus shipping. Check pic out at
http://members.aol.com/~jimmoci/ft101.jpg
Thanks!
Jim

Hey Professor: guess what??? a bunch of antikeyclowns were at Dayton and the gutless punk CB fagboys did not do shit. Shit, N8 had a red shirt on with his callsign on it in big white letters,and a white cap with red call letters. 2 other guys had "ANTI" on their shirts! Did any illegal keyclown faggotboy do shit? Nope.
Say it to their face??? shit several guys were DROOLING at the opportunity to do so.

I think the fagasses KNEW they were in for trouble and stayed away. They are cowardly barbarian pigs with nothing but turds for cranial matter. You profit off them by your activities and are in the same boat.

bgriffey@core.com (Professor) whined:

OTHER IMPERTINENT WHINY BULLSHIT DELETED "It must be a real thrill for them to tell people things they wouldn't dare to face to face."

Hey Professor: guess what??? a bunch of antikeyclowns were at Dayton and the gutless punk CB fagboys did not do shit. Shit, N8 had a red shirt on with his callsign on it in big white letters,and a white cap with red call letters. 2 other guys had "ANTI" on their shirts! Did any illegal keyclown faggotboy do shit? Nope.
Say it to their face??? shit several guys were DROOLING at the opportunity to do so.

Sure, and we can do the same thing to anybody that flames or spams
from swbell.net. And the same thing will happen -- the service to the
group will be discontinued for all users of that ISP. Just like what
newsranger and earthlink did. Very good idea, Randy.

286. Re: Antenna options

Newsgroup: rec.radio.cb

Years ago there was a thing called "Intenna" that was a very small metal box with tuning caps and a wire that stretched across your car window. It had to be very well grounded at the box and the end of the wire and worked as a slot antenna which made your car body the antenna. They worked better that a small gutter clamp antenna but not as well as a full size whip or good roof mount. Large windows and large vehicles worked better than small ones. I would bet that someone still sells something similar.

Randy I think you are barking up the wrong tree.
allthough the message source has ynn all over it the posting ip says it
belongs to psi.net.
abuse@psi.net
complaint #nab-501 48872
when reading header if ip is simular to like the first three
numbers in this case is 38.31.209.255 this is a psi.net isp
they are very interested in this one it seems they don't like being hacked.
Anyway if you are going to complain to psi mail full header
to above email with attached complaint #.

eventually he will run out of hacked isp's and have to post with his primary
or go away. either result will be satifactory to me.

QUACK! QUACK!

"matt" <mattf@netpluscom.com> wrote in message
news:3B1AE68C.C9DBDD3F@netpluscom.com...
> How do I turn down the dead key on a pc 76xl. Thanks

There are two ways. The easiest is to add diodes to D8.
In other words, lift the cathode (banded) end of D8 (a 1N400x
rectifier diode) and add more diodes in series with D8.
Observe proper polarity. The banded (cathode) end of
one diode should attach to the unbanded (anode) end
of the next. If the radio has been tuned up (D11 removed,
the slug from L14 removed, and the other RF chain coils
peaked), and you want to run an amp, 4 additional diodes
(5 total including the origianl) works well.

The other way is to remove JP-36 (a bare wire jumper).
Replace it with a 220 uF 35 volt electrolytic capacitor.
And, on the solder side of the board, put a resistor across
the JP-36 pads. The capacitor lets the audio through and
the diode sets the dead-key. In the above situation (tuned
up radio and the desire to run an amp) a 62 ohm 1/2 watt
resistor works well. This method is the preferred method.

There is no dead-key adjustment like there is on the sideband
radios. If you try to lower the dead-key by adjusting coil slugs
you'll lower the radios peak power output. The methods
described above lower the dead-key while preserving the
audio (peak) power output.

Good luck and have fun.

Message-ID: <9fgq96$3tmdo$2@ID-7206.news.dfncis.de>
Source record: 84419

It's a great auction site. I just saw a Blue Face 450 new in the box
go for $122.50--that's a $190 wholesale, $200+ retail amp. Word is
starting to get around. Bookmark it and keep an eye on it. Every
day I make a quick check of the "items recently closed" and the
"items closing in 24 hours." It only takes a couple of minutes.

And don't forget about to check out the 2950 that I'm auctioning there.

Earthlink prides itself on it's anti-censorship and
non-interference policies. They would be among
the last to drop a newsgroup due to content. If
you go back far enough you'll see that my first
few years on this forum were through them. They
are a very good ISP. I just got tired of paying for
what I could get for free. But if I had to go back
to paying an ISP, I would go back to Earthlink.

When you get rid of Earthlink, you will reload your whole blessed system.
If they didn't have a major corporation behind them they would be called
hackers and their software a virus.

> header, and I can't see where I put your name on the reply. Unlike
> this one.
>
Sorry "Davo", but i'll have to disagree with this one. The person who you
are replying to is the person who your name is "under". What I mean is
(using this string as an example - as much as my PC still has stored on it)
Power House replied to Bob's comment, you then replied to Power House's
comment, The Packrat and Power House replied to your comment and you have
now replied to Power House's latest comment.

Hope this helps clear things up.

332. Re: wanted to buy Uniden madison CB base radio

Newsgroup: rec.radio.cb

>You may want to check out Express Electronics. They just put the Madison on
>Sale for $179.99. It's under the On Sale Now section at
>www.exportradios.com.

Hi Matt,

Took a look, that's the Washington. I'll see if I can find the Madison links.

The older President version:
http://images.andale.com/img/imageTemplate.html?img=http%3A%2F%2Fimages.an
dale.com%2Ff2%2F117%2F111%2F1759662%2F59383_1_1.jpg

The newer (relatively) Uniden version:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1243286191

Hope the info helps. Take care and 73.

Mark

I could be wrong and I'm not speaking for Bill, but if it were me to lose mine over something like this.....I'D RATHER NOT HAVE THE DAMNED THING ANYWAY. I like the fact that mine expired so long ago that I would have to take all the tests over again to get it back and with all the crap on the air now.....I'll leave it to the losers that are on now!

Hey Professor: guess what??? a bunch of antikeyclowns were at Dayton and the gutless punk CB fagboys did not do shit. Shit, N8 had a red shirt on with his callsign on it in big white letters,and a white cap with red call letters. 2 other guys had "ANTI" on their shirts! Did any illegal keyclown faggotboy (sigh)

"Of course Doug, none of your posts here in rec.radio.cb would be complete if you didn't reference homo activity so let's get on with the antidote to your affliction.....

"Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity..

"Now that we have that out of the way, do we all need to see the post where you claimed that you would be at Dayton alone, with MAYBE your son? HAhaha! Now you say you were there with two of your (*), uh, whatever you want to refer to them as...if you were there at all. I doubt you were even there, since I know your call wasn't heard that day on any frequency (people listened), you damn sure didn't wander the lot with your call sign on your torn, stained shirt, and you didn't drag your big smelly azz away from this ng long enough to go to Dayton, let alone there and back ya' big cheeze! Now key that thing and let 'ol Twisty bust some RF in your azz. Hell junior, I might even wait for your reply this time. By the way, I see the gangman has been in contact with your chickiehawk tailfeathers..hahahahah! Last time that happened your posts started disappearing from here and you began to cry...hahahaha..encore...ENCORE!"

A police officer pulls a guy over for speeding and has the
following

Officer: May I see your driver's license?
Driver: I don't have one. I had it suspended when I got my 5th
DUI.
Officer: May I see the owner's card for this vehicle?
Driver: It's not my car. I stole it.
Officer: The car is stolen?
Driver: That's right. But come to think of it, I think I saw
the owner's card
in the glove box when I
was putting my gun in there.
Officer: There's a gun in the glove box?
Driver: Yes sir. That's where I put it after I shot and killed
the woman who owns this car and stuffed
her in the trunk.
Officer: There's a BODY in the TRUNK?!?!?
Driver: Yes, sir.
Hearing this, the officer immediately called his captain. The
car was quickly surrounded by police,
and the captain approached the driver to handle the tense
situation:
Captain: Sir, can I see your license?
Driver: Sure. Here it is.
It was valid.
Captain: Who's car is this?
Driver: It's mine, officer. Here's the owner' card.
The driver owned the car.
Captain: Could you slowly open your glove box so I can see if
there's a
gun
in it?
Driver: Yes, sir, but there's no gun in it.
Sure enough, there was nothing in the glove box.
Captain: Would you mind opening your trunk? I was told ou said
there's a
body in it.
Driver: No problem.
Trunk is opened; no body.
Captain: I don't understand it. The officer who stopped you
aid you told
him you didn't have a license, stole the car, had a gun in the
glove box,

and that there was a dead
body in the trunk.
Driver: Yeah, I'll bet the lying bastard told you I was
speeding, too.

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't

Several of the locals have taken up mobile operation. Both of them got the hardware installed and it more or less worked. Enter a local OT who pronounced upon the problem and told them it would work better if they opened the coax about six feet from the antenna, attached some wire (#14 in the instant case because of convenient supply) to the shield and grounded it to something convenient which happened to be a seat bolt. In both cases, performance went from adequate for a mobile to absolutely phenomenal.

The one I am most familiar with is a late model F-150 with the inevitable toolbox mount. A whip is tuned via a standard manual antenna tuner from 10 to 75. The tuner is grounded to the other side of the seat bolt. Tunes to full power like a bandit with decent bandwidth slicker than an eel in a bucket of castor oil. VSWR in the expected 1.5 range at 100 watts.

The other is an S-10 cab mounted. As this one uses the internal tuner, it requires cut loaded antennas but performs equally well. He ran a ground from the rig to the seat bolt on his own.

On 12 and 17 meters, contacts often refuse to believe they are talking to a mobile.

I have seen it work before and after but don't ask me to explain it. My best guess is some sort of decoupling that allows coax to be coax, tuners to be tuners, and everything to do its job and no other. But what I do not know about mobile operation would fill volumes.

Anybody have a better guess??

You are right, it is decoupling the shield. The shield on any coax is
going to have some RF on it, some more than others. The better you can
ground the shield the more RF that will come out the other end. If you
look at some of the better-built commercial radios you will see the
internal coax using three-point grounding or better. I do three-point
grounding on all my installs, but I use F-F adapters bolted on with a
strap. I tried chokes, but they don't seem to work nearly as well.

My thanks be unto you, sahib. I have seen the same sort of stunt used at the base of the antenna with no particular effect one way or the other. Apparently with any antenna, more than likely particularly loaded ones, the coax becomes part of the system so you back down the coax to do the decoupling magic. I like the connector caper!

Motorola and GE have used this trick for decades, but the Japanese manufacturers never seemed to pick up on it. I have learned a lot of these little tricks just by taking a second look at things that seem obvious at first glance. Like running power lines through the fender well instead of through the firewall -- it's where many auto antenna and speaker cables are run, not just for convenience but because the fender well shields the line from engine noise.

I don't think so. There is an ISP just two blocks away from me, and another four blocks away. They are almost as common as bars, and just as easy to find a new one. Eventually you can find one that doesn't care if you post pictures of Adolf and Eva getting frisky in the chicken coop. And if there aren't any anti's here to condemn, the illegals will be cussing and swearing anyway at each other. A search on google will demonstrate that they do that quite well.

So lets face the facts. Pirates just don't like people telling them that what they do is illegal. They will go to extreme measures to hide from their responsibility and from the truth. They will even suppress their abusive nature and condemn others for the same. But they can't continue this politeness campaign for much longer or some of them are going to end up at the doctor's office with severe constipation.

Of course I wouldn't expect you or them to agree, so "We shall see, shant we?"

Source record: 84513

Greetings!

I learned a little trick similar to this, and received flames for it
but the concept is the same.

In a mobile install, usually the length of coax shouldn't matter. But
when using Mag-mount antennas, the "tech" that was helping me with a
difficult setup in an Astro van, suggested to trim the coax to 6 feet,
and if needed - use a jumper of any convenient length to route the
coax to the radio.

Then, using a braid or an old section of coax, use a barrel
connector on the free ends to connect the patch cord, and
with a hose clamp to fit around the braid, and barrel
connector together, like a tap, and route the free end of the
braid to either an overhead light socket ground bolt, or
seatbelt bolt. With the patch cord simply to hook up the
radio to this "ground point". Keeping the "ground run" short
from tap to ground, helps.

Why 6 feet? This is where it gets strange. Nothing special, except he
explained that most Mag-mount installs fail when the coax itself is
close to a length or point that the RF would want to stay on the coax
versus using the metal of the roof or trunk of a typical mag-mount
install location.

He demonstrated this by simply placing a mag-mount on a coffee
can, in the middle of the room, and with an SWR meter tuned
the antenna using the antenna with the coax left untouched.
"The Key to this" he explained, "is the length of coax, the
antenna is not working any other ground except the coffee can
and the coax." This effect can be proven at any home, and
to see how coax routing can affect this, try a straight
run, and adjust the angle that the coax travels away from the
antenna. This "angle of dangle" can also affect SWR.

Most people use a CB in a temporary setup, when they first
start out. "It's a normal way of testing the waters" as he
said, "So, lot of people don't mount the radio in a fashion
that allows the RF circuit to be complete. From radio, to the
antenna, and back again. Thats why the coax length seems to
be true for a lot of people. It simply works for that
purpose."

Now, I'm sick and tired of getting flamed for "use this length"
issues, and I don't try and promote the effort. But the little trick

of using only a length to get it inside the car, find a good ground point then continue on to the radio, makes sense. The use of the barrel connector to tie the antenna coaxial shield, to the patch cord, makes a convenient point to also ground the system at a location thats easier to make the radio and the antenna work, but keeps the flexibility of mounting better for the driver. The barrels outer metal is the same potential as the coax shield, and all ends remain sealed and water entry is less of a problem.

The benefits seem to trace back to mounting the radio at a point thats convenient for the driver and not having to make an effort to "drill here and there to punch holes inside a cars dash or floor pan just to ground the radio - it makes people cringe." It's a good point but doesn't address a safety issue of electrical ground and RF ground when the patch cord gets chewed up in the seat when you have two different drivers that slide the seat back and forth. The patch cord, if not routed properly - will get tangled up and cut it two if you're not careful. Because of that, I recommend that you mount the radio in a permanent spot using metal of the dash or transmission hump. Routing of coax from that mount is easier to protect from "pinching". It can also save the radio, using permanent mounting, from further damage or bouncing around inside the cab, hitting people, or slamming into the dash on quick turns or stops.

The ground point, or "tap" is simply the point in which the antenna [being a mag-mount or other non-grounded setup] can see a ground and the radio also sees a ground.

There are some side benefits to this, one is less electrical or engine noise, with lessening of the "alternator whine" another benefit. Others include flexibility of the antenna mounting location and coax once routed into the interior doesn't have to be in the way.

Problems are, not too many newer vehicles or their owners take a liking to this "fudge factor" for wiring a system together. Plus you get an "insertion loss" from this type of connection.

But, considering the performance issues, both RX and TX are better for the user in the long run if all they want to use is a mag-mount type of antenna system. Aside from mounting the radio permanently to a good ground, it doesn't replace the permanent mounting position, with the latter still my best piece of advice to anyone wanting a good system.

However, it gets around other problems with plastic dashboards and location of the radio for the customer.

To further this, anyone whom has had to deal with some of the latest "Negative ground only" radios and their grounded frames, will take kindly to the idea of a separate ground point to further reduce engine and alternator noises. Now, you can ground the radio chassis at the frame inside the vehicle with coax, and only need to route one wire to the dashboard or battery tap. With ground for the radio being supplied

by the braid of the coaxial shield to the alternate grounding point
for the antenna. Makes a lot better ground, and less whine - with
little problems with SWR or performance.

On Tue, 05 Jun 2001 01:41:27 GMT, while the modem was busy tying up
IRQ's with the Mouse, "Richard McCollum" <rmccollOMA@worldnet.att.net>
dissertated the following:

Hello,
First of all I would check with your apt. management to see if you can even put up an antenna,
second (assuming you can and did put it up) I would look at a new Cobra 29, uniden PC 66, or the like but with a mobile model you will need a power supply, a 13.8 volt regulated 3 amp will work just fine. If you want more features, however such as sideband etc. I would look at a Cobra 148 or Uniden Grant, once again these are both mobiles so you will need a power supply. If you want an actual "base" Radio shack made some good ones a while back called Navaho there are many styles and almost all are good (make sure its 40 channel), another option is a Uniden Washington, or Cobra 142. Well that's it as far as suggestions for radios goes, but as for new or used, well...
A new unit (obviously) has not been touched (inside) by anyone that you don't already know about, and you can pretty much be sure everything is working properly. But on the other hand, when dealing with realistic, Cobra, and Uniden allot of the time the older ones are slightly better, not to mentioned if a good tech has gotten to them they have been aligned, peaked, tweaked, modded, and everything else under the sun which basically means better performance, more output power, better receive, and possibly more channels and slide capabilities.
Over all I would suggest to you a Cobra 142 (find the nicest you can for around $100.00 US)
Then find a well respected tech to do any and all of the work you want done to it (what you want done may be best figured out while talking to the tech, he can help you understand what everything is and why you might want it), also I would get a desk mic (Astatic d104 would probably be best), make sure this is new they can be fragile and you don't want to pay good money for some ones screwed up mic
142 = $100.00
D104 = $100.00
Total = $200.00
I hope I helped

That's just it. In the world of illegal CB, you *CAN* stop someone from excercising
their free speech by jamming them with a loud, high powered-signal.

These guys think the NG is like CB where they are 'king of the hill'. They
are attempting to run the NG in the same way they run their local channels.

They are reallllllly mad because the same tactics that wok on CB don't work
here. Instead of being able to eliminate anyone that disagrees with them,
they are forced to have to live with them. And they hate it.

I don't think so.

"Mistake number one......try not to think Spark. It blurs your objectivity."

There is an ISP just two blocks away from me, and another four blocks away. They are almost as common as bars, and just as easy to find a new one. Eventually you can find one that doesn't care if you post pictures of Adolf and Eva getting frisky in the chicken coop.

"Of course you know all this through experience, what with losing so many of them. Interesting chosen analogy. How long have you been an alcoholic?"

And if there aren't any anti's here to condemn,

"Why condemn at all?"

the illegals will be cussing and swearing anyway at each other.

"Nose problem. Why involve yourself? Nose problem."

A search on google will demonstrate that they do that quite well.
So lets face the facts.

"Fact: You are a self admitted troll and exposed liar in the group. "
Fact: You are inferior to those you attack, which dictates your ego be the center of attention in order for you to compensate.
Fact: You get put on hold every time you key, so you compensate for what you lack on the air, here. It is all about compensation and justification for what you lack in your admitted game, not about bandwidth like you sometimes wish to infer."

Pirates just don't like people telling them

"No. Most people don't like people telling them what to do."

that what they do is illegal.

"You assume what everyone does is illegal. Talking about it isn't, even though it pains you that you can not censor the speech."

They will go to extreme measures to hide from their responsibility and from the truth.

"Like a bunch of aliases taking both sides of an issue and fake headers? Do tell."

They

"They." "We."
"Do a google search" says sparkles.. "We may see a pattern," says sparkles. After all, Doug uses "they" and "we" often in his posts. . HYUK."

will even suppress their abusive nature and condemn others for the same. But they can't continue this politeness campaign for much longer or some of them are going to end up at the doctor's office with severe constipation.

"So you admit your temper is growing short with that last round you lost by getting another access site yanked that you were perpetuating your abuse through. Deal with it."

Of course I wouldn't expect you or them to agree, so "We shall see, shant we?"

"Now, why would anyone expect anything from you? They don't, and you haven't let us down yet. Now turn it on and let me hear your quacking on the air.""

Bingo!

Note that the Anti's have NEVER tried to get pirates thrown off their ISP
- even though they may have a solid legal ground to do so (check ISP TOS
about "promoting illegal activity and violating federal or state laws").
We are actually amused by the debate.

However, crybaby illegals SIMPLY CANNOT TAKE CRITICISM!

Illegals must "silence" their critics. They must "eliminate" us!
They threaten and shout "we're gonna GET you". Is this how the criminal mind
works? Perhaps.

Anyway, we are HERE TO STAY.

Get used to us.

Short Bus Conglomerate member said:
That's just it. In the world of illegal CB, you *CAN* stop someone from excercising their free speech by jamming them with a loud, high powered-signal.
These guys think the NG is like CB where they are 'king of the hill'

"And again, you are projecting what you lack on the air. On the air, you are nobody, which in turn dictates your ego get on here and act like a SOMEBODY, as you so aptly out it "king of the hill."

They

"They? Now I guess "they" would be anyone who sees you for the jackass you are or happens to disagree with you?"

are attempting to run the NG in the same way they run their local channels.

"Again, a blatant, arrogant assumption that you are aware of how everyone operates their local channels (that is actually humorous) and your over useage of the word "they", belittle your poor attempts at any conclusion you may be attempting to infer. You never could aptly define "we", so no one realistcally expects your challenged tailfeathers to be able to define "they".

They are reallllllly mad because the same tactics that wok on CB don't work here.

"Really? Where are the spams of hundreds and hundreds of duplicate posts today? So much for your word."

Instead of being able to eliminate anyone that disagrees with them,

"Not disagree, just the porn projecting you did and the duplicate postings and the forgings."

they are forced to have to live with them.

"As are you."

And they hate it.

"No. You hate. Not everyone shares your inadequecies, especially the hate and malice factor. Now key up your hypocritical lesiones self and let me hear that junk radio again, or did I scare you away the first two times?"

Bingo!
Note that the Anti's have NEVER tried to get pirates thrown off their ISP
- even though they may have a solid legal ground to do so (check ISP TOS about "promoting illegal activity and violating federal or state laws").
  We are actually amused by the debate.
However, crybaby illegals SIMPLY CANNOT TAKE CRITICISM!
Illegals must "silence" their critics. They must "eliminate" us! They threaten and shout "we're gonna GET you". Is this how the criminal mind works? Perhaps.
Anyway, we are HERE TO STAY.
Get used to us.

"Uh, are you out of the loop with the girls? Why aren't they keeping you informed? Leland and Doug hit webtv with false complaints from many of their aliases. They even posted dates saying when I was to lose my service. Maybe you are in the loop. You lie just as well. Got radio, chickiehawk?"

406. CB for Goldwing

Newsgroup: rec.radio.cb
Date: 2001-06-05 16:01:11 UTC
From: Peter Patton <Peter@minnesotamotocross.com>
Message-ID: <3B1D0253.49EFABA7@minnesotamotocross.com>
Source record: 84544

Dunno if this is the right ng to post this question, but it was the closest I could find. My boy and I are going on a cycle trip in a few weeks. He is using my dad's Harley, which has a CB radio on it. My Goldwing, however, does not. I could buy the Hondaline one for $800, but can't justify the price. Went to Radio Shack yesterday just to get some info. From what I have read in this ng handhelds are not the best option. Room isn't a problem since I can secure the amp in my trunk. At RS I was able to find a voice activated and a PTT headset (earpiece and mic). Voice activated would be optimal, but the clerk said they generally are not as clear and have a fair bit of lag time. Can't imagine it having any more lag time than using my PC Cam, which is good enough for me. Any thoughts on this?

Main question.....NONE of the CB radios at RS had BOTH speaker AND mic jacks in the amp or the microphone to allow me to use the earpiece/lapel mic setup. Any ideas on brands/models that will allow me to do this? Possibly a website that sells them?

I'm still in the learning stages of CB radios, so pardon any ignorance I may have displayed in my wording above.

Thanks, Peter

"Uh, gee, a nose problem and a troll. How are things in Chi town? Oh, I mean (chuckle) IOWA! Kind of ruined your play plot before you got out the gate, eh? Heheheheh! Now go back to your other name. You so desperately wanted to be a member of the Anonymous Cowards' Twistedhed CB Fan club, you got it, chickiehawk, except for the anonymous part. From here on out, I will post your headers every time you post, and your new NG name and whipping boy handle is "Cadet". Welcome aboard Cadet, and I am certain we will find a place for you among our cb wall of shame and find time to embarrass you as much as we do Dogie and Sparky here, as well as on the air. 555 upper side has been absolutely hysterical, for those of you that haven't tuned in..try it on Saturday mornings, when a post of one of the commando dingo warriors are selected, read aloud on air, properly attributed by FCC issued call, and debated throughout the morning. These guys single handedly are responsible for more pirate activity on ten meter than one will ever know. A great big thanks to our friends in the Arizona desert. Hint: Your trolls will have much more merit if you fail to be recruited by the Bi-brothers and refrain from their tactics. Keep it simple, find an issue of your own (if you're capable) to the point, do not lie, (like Leland, Sparkles and Dogie) or falsely accuse (like Leland, Dogie and Sparky) or forge (like Leland, Dogie and Sparkles) and we can make a duck out of your chickenhawkie self yet. Again, welcome aboard, have fun, and follow sparky to find out where to get my name tattooed on your beak. Idolatry CB worship of me is each weekend when I depart, occasionally beginning on Thursdays, taking place several times a day each day until I return. Sometimes I wish there were two of me so there was enough to go around. Again, glad to have you, Cadet."

411. TRC-459 40 CH SSB Radio

Newsgroup: rec.radio.cb
Date: 2001-06-05 18:23:03 UTC
From: Russell <rusty@dccnet.com>
Message-ID: <3B1D2387.F57BA724@dccnet.com>
Source record: 84454

Hi there,
I am selling a TRC-459 SSB 40 channel radio
The radio is in descent cosmetic condition,only down fall is its missing
the fast button for the clock,other than that its in pretty good shape.
The radio does transmit and recieve but needs some T.L.C.for example the
volume slide switch is scratchy and finicky to get the volume to work
but by wiggling it, it will work loud and clear,secondly the buttons on
the left are on a slight angle therefore slightly rubbing the edge and
sometimes sticking,there is a switch on the back left that may be for
extra channels but I am not sure?....other than that all lights and
led's work.I will consider any (reasonable) offers
Thanks and please e-mail me directly.
Russ

Tsk. Tsk. Tsk. Twisty, twisty, twisty.

You are the one who wants to "get" the antikeyclowns. The burden is squarely on you to do something about it. We are here in the Sarasota area this week. If you desire to meet, we will meet you. The Dunkin Donuts on Route 41 would be fine.

We don't care if you post 1000 messages full of your pirate babble daily. It entertains us - you are our personal circus clown. Post information about yourself - or don't post it. We do not give a hoot.

The fact that we are here nosing around your stomping grounds should be good for a wild-ass rant or two. So let loose with it, clown-boy! HAHAHAH!!

Hm. Like the filth you post under the 1mangang alias?

>You can't help yourself. Your ego will only allow so much
>embarrassment by me before you lose control. How many times have we had
>you TOSed now?

Who is this "you" you keep referring to?

>You really ought to turn on the radio, key your duck self
>up on the bowl, and see who can hear you,

HAHAHAH! That makes no sense, Twisty. But that's you to a "T". Why should
we encourage those who transmit with illegal power on the Toilet Bowl?

>maybe relieve some of that
>stress I cause you to obsess on all day and night long. Oh, that's
>right, you can't talk on cb, just worship it."
>

Got you posting 3 or 4 times a day since Monday. A bit worried because the
AntiKeyClowns are snooping around your home turf?

>turn on that radio

Twisty....begging...begging...begging...for someone to listen to him and his pirate cb pals in Tampa Bay. Sorry, we don't travel with a cb radio in our carry-on.

HOWEVER...

We did briefly hear a moment or two of channel 6 when a trucker pulled up to a stoplight near the Publix supermarket on 41. This is what we heard:

"TWISTEDHED YOU SUCK MY DUCK YOU ARE A FUCKING DUCK YOU ASSWIPE WE KEY ON YOU WE CUT YO LIPS OFF YOU DUCK YOU PATHETIC MONGREL DOG YOU THIS BE THE WAMMA JAMMA 76 GETTIN ON DOWNNN!"

..or something like that. For the life of us, why ANYONE would listen to that crap - ket alone put up with that kind of abuse - we cannot fathom in our wildest dreams. Hey, if that's your bag, go for it, fagboy, but we're not listening.

Tsk. Tsk. Tsk. Twisty, twisty, twisty.

"Stuttering already? I can see why, if you actually believe you are near
me."

You are the one who wants to "get" the antikeyclowns.

"(Chuckle) Whatever gave you that paranoid idea? I invited y'all down
for some good suthin' hospitality, but I can see why y'all are so scared
to come see me."

The burden is squarely on you to do something about it.

"About what? There is no "it" except in your mind. Funny you think I see
you as a burden. I have no problems, chickiehawk. If you are trying to
pass yourself off as such, you need to do better."

We are here in the Sarasota area this week.

"Ah, what happened to the Bay area? AGH..BUCK BUCK!"

 If you desire to meet, we will meet you. The Dunkin Donuts on Route
41 would be fine.

"No, it won't be. First of all, you said the Bay area, you are way out
of the Bay area. Secondly, there are many Dunkin Donuts on 41, not just
in your little tourist area. Sarasota? Good place for you yankee
tourists. Come to the suncoast and, yea, I'd like to meet you. I'll
drive anywhere you want in the Bay area."

We don't care if you post 1000 messages

"Course you don't. You do it yourself."

full of your pirate babble daily. It entertains us - you are our
personal circus clown. Post information about

"Glad to see delirium isn't completely lost on you, and I am glad to
bring some sunshine into your otherwise nonexistent life."

While multi-grounding points have shown to IMPROVE output.....OVERGROUNDING CAN and DOES HARM performance. We've learned this over the years on a few competition setups we've been involved with. There are also some who swear by grounding their vehicle to a pail of saltwater.....I like that one buy I've never tried it.....

Who's crying? Since when is a post 'nullified' with a response that
says nothing but "Yeah, um.....Ok."?

>And another question that so many of the illegals in this ng have asked
>coutless times before, "who made you the usenet police"?

I have always had only one access site, and I haven't lost it yet. But
if you go back and read old posts you would find that the question had
been posed by illegals long before Doug was on this ng.

>What's the fine for pirate radio operation? Up to $17,000.

For once you have a very good point. Why should any of us bother the
illegals? We should be encouraging them to run dirty amps and mod
their radios so they will get caught. At the same time we should be
posting info on how to DF pirates and expose their operations to the
public and to the FCC. You know, you really suprised me with such a
good idea, twist.

>"You don't like losing access sites to the ng that assist in disguising
>your posts? Don't violate their TOS..hahaha!"

Perhaps you should look at who the majority of anonymous posters
really are -- they are the illegals. The -real- men are the ones that
put their real names on every post. You will never have the integrity

of Dick, James, Jerry, or any of the others that aren't afraid of personal responsibility. Sorry, twist, your words mean nothing.

But you still had a very good idea.

If you accidently hooked up the power leads backwards, there is a
reverse-polarity protection rectifier that may be shorted. Otherwise,
it could be almost anything, including the final.

Don't think so, son!"
I have always had only one access site, and I haven't lost it yet.

"Uh, that's not what some of your posts claim. Some of your posts claim
you have been here for many years with several different ISP's."

But if you go back and read old posts you would find that the question
had been posed by illegals long before Doug was on this ng.

"Uh, again, yea, but the group wasn't spammed in the few years I have
been here until DOug came along. I mean, it was spammed, but not like he
did it."

What's the fine for pirate radio operation? Up to $17,000.
"So? Are you going to pay it? Then shut up."
For once you have a very good point. Why should any of us bother the
illegals? We should be encouraging them to run dirty amps and mod their
radios so they will get caught. At the same time we should be posting
info on how to DF pirates and expose their operations to the public and
to the FCC.

"That isn't a bad idea, Spark. It is much more effective than coming in
here like a bull in a China shoppe and accusing folks of all kinds of
immorality the moment one disagrees with someone attempting to conceal
their identity."

You know, you really suprised me with such a good idea, twist.

"It's a great idea and not a new one. It was suggested long ago, among
others, to be a correct, effective, and positive way for Doug, and
whoever else is intmidated by us, to handle their crusading techniques."

What's the fine for spamming a newsgroup?
  $0.00 How can you avoid reading things that might offend you?
Don't read them.
"You don't like losing access sites to the ng that assist in disguising your posts? Don't violate their TOS..hahaha!"

Perhaps you should look at who the majority of anonymous posters really are -- they are the illegals.

"Agreed. But I don't really care who is who, someone plays games with me, I don't care who it is, I'll give it back."

The -real- men are the ones that put their real names on every post. You will never have the integrity of Dick, James, Jerry, or any of the others that aren't afraid of personal responsibility. Sorry, twist, your words mean nothing.

"Ah, but they do. In fact, they carry such great weight, you not only are a member of my CB fan club church, but self-elevated and self-appointed ordained minister and spokesperson for the porn posting posse of my covenant'.

But you still had a very good idea.

"But Moparholic was right, you look like a fool."

Nah. He won't even ID himself in the NG. Oh well, here I am at Dunkin Donuts on 41 in Sarasota driving a red Ford rental sedan and enjoying a nice big jelly donut waiting for some fat ass cracker to come tell me what a big illegal cb op he is but nobody showed up. Oh well.....

Hey Twist, if you feel so impotent maybe you should go back to posting as 1mangang.

The semantic gamesmaship ploy again? OK. By that logic, it would be wise to post this ad in rec.radio.amateur.digital, too. But it is not. This group, a CB group, is the only place it's posted in. You know it is meant for illegal CBers. Be a man and admit it instead of being a wease.

460. Re: CB for Goldwing

Newsgroup: rec.radio.cb
Date: 2001-06-06 00:39:59 UTC
From: Bill Eitner <kd6tas@netzero.net>
Message-ID: <9fm92n$4vctg$1@ID-7206.news.dfncis.de>
Source record: 84685

Motorcycle CBs can be a problem, that's why Honda wants
$800. Motorcycles produce a lot of static, and the Goldwings
that are set up to have a CB have a lot of added stuff to discharge
static and engine noise. Unless all of that is done, most
motorcycle CBs have very limited range unless you pull over,
come to a stop, and turn the engine off in order to get rid of
the noise.

Why not take Tamiami to John Ringling Blvd, go west and meet him on the
other side of the bridge across from the
20 story building on the right side of the road.
Or just continue into Long Boat keys and meet him
at Joe's Crab Shack.

Landshark

465. Twisty Is So Chicken That Col. Sanders Is Offering Him A Job!

Newsgroup: rec.radio.cb
Date: 2001-06-06 00:50:26 UTC
From: AntiKeyClown Armada <sailing@sailing.net>
Message-ID: <3b1d7042$1@news2.mibx.net>
Source record: 84488

OK, maybe you are old and infirm and can't drive too far. Fine. How about this? We'll be at the Hess Station at the corner of Fruitville Road and 41 in Sarasota at 9PM. One of us will be wearing a red t-shirt that says "ANTIKEYCLOWNS RULE". We'll be sipping a Dunkin Donuts coffee and holding an envelope that contains personal information (photo, phone number and true address) for every AntiKeyClown in our ENTIRE organization, including N8WWM. Imagine, you could crack the whole thing wide open and be the hero of the illegals in the NG if you just showed up. Honest, this is a one time only offer and if you don't take us up on it you will HATE yourself for years to come. All you have to do is come and take the envelope away from us.

466. Announcing the **Twisty-Buster** RDF!

Newsgroup: rec.radio.cb
Date: 2001-06-06 00:53:38 UTC
From: sparky@cet.com
Message-ID: <3b1d7ef8.8367713@news.cet.com>
Source record: 84552

* Do radio pirates splatter all over your signals?

* Are you tired of tolerating those loud-mouth punks?

* Do you want to stop hearing that interference in your TV?

* Do you want to turn your scanner or CB radio into a useful tool?

Then you need ...

... the **TWISTY-BUSTER** Radio Direction Finder!!!

The **Twisty-Buster** Radio Direction Finder is a handheld, phase-discriminating direction-finding array that works better than a loop. It can be built in a single evening using inexpensive components and only basic soldering skills. When completed, you will be able to identify the source of any transmission your radio is capable of receiving. With two **Twisty-Busters** and the help of a buddy, you can locate any transmission within seconds!

Q: How much does it cost?

A: That depends on what you already have in your junkbox. If you need to purchase everything, including the radio, it might cost you $100. If you are resourceful and have some electronics experience, it may cost you absolutely nothing at all!

Q: How much electronics skill do I need?

A: The circuit uses one chip and a handfull of passive components, and can be assembled on perfboard. A printed circuit board will be available either blank or fully assembled.

Q: Can I improve on the design?

A: Absolutely! Many things can be changed or modified, provided you do not change the parts needed for the *Twisty-Buster** to function correctly.

More details will be found next week at the **Twisty-Buster** webpage. The URL will be announced right here as soon as the page is completed.

Stay tuned ...

This is insaine people marine and cb are different if the one on water is talking cb they are illegal. if the one on land is talking marine they are illegal.
one of you is either going to drain the lake or fill the tub.

Quack! Quack!

Well I have never advocated operating illegally on CB, ham, or any other radio on this or any other newsgroup, so why don't you just go ahead and get all those that do TOSed and be done with it Mr Atty., whatever that means.

Ho ho ho. Very funny! Twistedhed RUSHES to agree...

TWISTY: Oh yeah! GREAT idea! Leave us alone! Encourage enforcement! (snicker)

We happen to know that you thumb your nose at FCC enforcement, as do many other "fellow" illegals. Reality is that your chances of being caught and fined for your actions are slim thanks to federal budget cuts and so, LIKE LOOTERS (i.e. criminals) you will take advantage of that.

Sorry, but the ANTIKEYCLOWNS are going to use the same tactics on the NG that you use on the CB band. We don't respect rules. We don't care if you are inconvenienced or offended. We don't care if you don't like us. We'll be as nasty as you are - and even go a step further.

Cryyyyy all you want Twisty, Train, Moped, and other illegal shitheads.....we are here to stay.

I am not about to engage you in a silly game of semantics. You know that the NG is used to support illegal CB. Read the archives through Google if you sincerely do not understand what I am telling you.

Then go read your ISP's TOS, re 'using the service for illegal purposes'.

It is not about breaking FCC rules on the NG, it is about encouraging the breaking of FCC rules on the NG that will get you TOS'ed.

On the contrary, GG. The ones who seek to TOS people are the illegals in
this NG. They are abaies that cannot take someone criticizing illegal CB
- so they seek to silence the posters who disagree with them. Sound infantile?
You bet they are. It's ironic because the chief proponent of "Law And Order
In The NG" of this bunch is Landshark who has a well-documented history (search
Google) of posting "sex partner wanted" ads to alt.transexuals and other
sicko sex NG's.

We couldn't give a hoot about Landsharks gay gay ways until he started in
saying how he was going to get people TOSd for 'bad language' in the NG.
Go figure.

Hello,

This is to notify you that PSINet has received your complaint. We do view the
conduct that generated your complaint as prohibited and we are taking the necessary
steps to make certain that account or network understands the prohibition and acts
accordingly if the traffic originated from PSINet's network.

If the report generated is in regards to traffic off of our network, PSINet would NOT
have any authority over this matter. If you are unsure of the origination of the traffic
you may wish to use http://www.arin.net/whois/arinwhois.html or use a UCE reporting site
like http://www.spamcop.net to assist you.

When you report an abuse incident in regards to PSINet's network ONLY, supporting
information (mail server headers, or supporting server logs, and time zone) is required.
You can use our on-line reporting site at
http://www.support.psinet.com/PSIabusetik/ or
send a complaint to abuse@psi.com.

Thank you.

Net-Abuse Team
PSINet Inc.

That's right you stupid, inbred, homosexual, redneck, motherfucking, brain dead, useless cocksuckers! I'm taking over all of Usenet! There isn't a fucking thing you can do about it either! You're all a bunch of worthless scum bags, and now you will all answer to me! If you don't like this fact TOO FUCKING BAD! You think you've had trouble with kooks before? You aint seen nothing yet! I will go down in the annals of history as the man who brought you to your knees! Now get down on your knees and pay proper tribute to my glorious self! While you're down there SUCK MY COCK! I know you want to!

I AM BRENT K KOHLER LORD AND HIGH MASTER OF USENET!

My first royal order to all of you peons is that from this time foward you will add the following signature to all of your posts!

***** This was posted with the express permission of *****
****
** HIS HIGHNESS BRENT KOHLER LORD AND MASTER OF USENET **
****
********** We are simple servants of his will **********

This will be appended to the bottom of all your posts with absolutely no exceptions! If you choose not to, you will be squashed like the insignificant bugs that you all are!

I am running Usenet now! You may only post messages because I for the time being am allowing it! Do you faggots understand me!

THIS IS THE DAWNING OF THE AGE OF BRENT!

ALL HAIL BRENT K KOHLER LORD AND HIGH MASTER OF USENET!

This is MY opinion, and MY opinion only. Why do 'we', as a collective newsgroup, succumb to the stupidity of those who are hell-bent on disrupting this NG? We/I are simply playing into the 'hand' of the ANTIKEYCLOWN group, and others whose mission is to send 'us' into a tizzy. Whenever you or I meet their demands, or RESPOND to their FAKE postings, or other shinaggigans (did I spell that right?) WE, as a collective community are playing into their hands. And that's what 'they' want! So...by all means(I know it may be hard) DON'T respond to them!!! Let's get this NG back to when Gary, Jay, Skipp, Unit 69, Train, Prozac, G Seven, Professor, (yes...me too) and the vast majority of 'regulars' were here. DON'T PLAY 'THEIR' GAME! After all...we know the fake postings are fake. Let's get busy fellas...

Why can't someone start a "Private Newsgroup"
one for those of us with shops and trying to
really help each other. Maybe it can have passwords
or a far off place that the average user won't find
unless told about?????
Just a thought..

499. Danita 608 vs Alan 42 handheld

Newsgroup: rec.radio.cb
Date: 2001-06-06 07:19:08 UTC
From: katekebo@yahoo.com
Message-ID: <29bb1701.0106052319.6760361@posting.google.com>
Source record: 84588

I have hard time deciding which handheld to buy. I have nailed down my decision to the Danita 608 and Alan 42, both in the 40 channel AM/FM version.

My question is: which one is better performer? Alan 42 has more accessories, and Danita has more features. But performance-wise, which one does a better job?

If you want performance, forget the handheld. You would do better with
a gel-cell and a decent mobile. Handhelds are not built for any kind
of 'performance'.

Forget the radio, it's all in the antenna.

There are several newgroups for those that wish to operate illegally.
I'm sure that you have had several emails sent to you by now that have
explained this. However, if you want to spare the $17,000 fine and
operate legally, there are many here that will give you all the help
you want.

Don't worry about anybody else, sharkie. We both know that the only thing that matters is what you tell the right people. County Health migtht be interested in those homosexual posts that you don't want to explain. In fact, I think they might even inform your employer if you don't take thier AID's tests. Wouldn't that be a terrible thing if you get fired for failing to take an AIDS test. And wouldn't it be a terrible thing if people were to learn about someone ignoring an EPA regulation in their own front lawn (no, not you shark).

If you get any emails with the subject "New Roman Symb" and an attachment named CFGWIZ32.EXE, just delete it. It has the "W32/Magistr@MM" virus.

Well, St. Hypocrite, since I am the only one that will respond to your posts, maybe you should really think about what you are doing here.

Or not. Like anyone cares what you post ....

Hey, I set up reservations at the Tradewinds on the outskirts. Any good? Or should I look a better value, like your sister's flat? I hear she can suck the Ahab off of Moby's Dick. But you wouldn't know about anything that might involve incest, would you?

I zero'd in the crosshairs today, but I need to know what type of film to buy. Are you a day or night person?

Where on this post did I say I wanted to operate illegally??? I was just asking about a place so as one wouldn't have to funnel thru all the B.S. posts. Would be much nicer to post a simple legal thing and get something back, it could be as easy has asking who has this or that or what warehouse has the best deal on something without having to call 10 places.

Me and my 4 watt radio, OUT !!
(12 watts SSB mode)

We are using it here at our communications center at the local Red Cross/REACT office, we haven't had any complaints with it, we use an Antron99 for our mobile communications trailer. Running plain jane 40 channel radios we are able to communicate from the office base to our comm. trailer to almost any town in the county that we cover, only problem town is Deshler Ohio, When we have something going on there we have to set up relay stations. We have an FCC license for UHF freq's and we have Kenwood radios for these, now we need to get a repeater then we will be able to cover the entire county.

Well all, I will be out of town for 5 days starting tomorrow, I am leaving at 3 AM to drive to Gambier Ohio for 5 days of Disaster Training at the Ohio Training Institute. I will be returning on monday and then tuesday I will be moving to Napoleon Ohio, only a 12 mile move. Nice thing where I am moving to there is already a tower and antenna set up.

If anyone ever gets into this corner of Ohio (N.W.) give me a shout, we operate on CH 2, and our friendly group of locals hangs out on CH 13.

533. PC Speakers Broadcast CB Radio Signals...

Newsgroup: rec.radio.cb
Date: 2001-06-06 12:22:58 UTC
From: Mike <wxyz09@yahoo.com>
Message-ID: <3B1E287D.5DA59514@yahoo.com>
Source record: 84616

This may not be the appropriate group, but I don't know where else to post it.

At work, we have Dell GX110 mini tower PCs scattered all over the state.

Some of them are located in rural areas. Several of these PCs w/ video conferencing hardware/software installed pickup CB radio signals broadcast by
truckers traveling on the nearby highway. It is very disruptive to be in the middle of a video conference over IP and have the audio signal taken over by truckers discussing speed traps, hookers, etc. Some locations in urban areas also pickup CB broadcasts but is is not disruptive to productivity because they are so infrequent in the city.

Any suggestions that'll fix the problem? Should I post to another news group?

ten/four, good buddies,

Mike

If yopu want to use walkie talkies get a mag antenna with a bnc connector it will slightly improve range, and get a cig lighter power adapter cause those things will eat batteries. Having said all that, you'd be far better off going with a regular mobile radio. There are some nice inexpensive radios that will do what you need. Hope this helps good luck with the move and have a safe trip.

Careful, doc, read the question again, then look at your answer. I'm sure you know what 'triagulate' means. How long do you think that takes with an omnidirectional antenna?

Take a peice of good stainless sheet metal, bend it into an "L" and drill holes in it. mount it on the inside of your drivers side fender in the space between the fender and the hood with the bend facing the outside of the fender. Mount your antenna to this, using a whip antenna such as a Bandit, K-40, or Wilson. These will be flexible enough to pull into your garage w/o doing any damage. I know of one local who even has a 102" whip mounted to his rear quarter in his mercury this way and he pulls into his garage .

Greetings!

Sparky, the only thing we can point out is...

This is an open forum. We do follow guidelines here. Anyone paying good money to have access, desires to be able to openly talk about anything and everything. To keep it categorized, the USENET is set up in a hierarchy structure to keep the mess contained.

If people want to discuss the topics of radios, they are supposed to be allowed to - without harassment or spamming. What may be illegal in one region, does not mean it's illegal in other areas.

If it's an illegal topic, either avoid it or take up flaming via Email.

If it's something up your alley, then feel free to discuss this - openly. If you get flames, and we all do, it should stay on the topic and not bring in the relatives or bodily functions.

The bandwidth is for the CB radio realm, which does include *any* type of free and open discussion about CB. Keyword *UNMODERATED*.

What I don't want to read is stuff that even I would be embarrassed to post.

If you wish, or anyone for that matter, wish to discuss legal aspects, and have it moderated for legal issues, then feel free to petition USENET for such a NG.

This was a "moderated" NG until someone pointed out that the charter suggested "open and free discussion". Meaning you can't flame someone for something that is considered a part of the open and free discussion this NG is created for.

"Praise openly, Flambe Privately"

Greetings!

The idea suggested a different method of grounding the radio in such temporary setups. It also can prove a point about the Multiple grounding points and the noisy ground loops that form because of it.

It's for those that "stuff the radio in-between the seats" - and provide no provision for ground at the radio. [French Fries and Cookie Crumbs are at owners expense...;-]

What is neat about this, it works! Coax shield can provide the ground for the negative ground chassis radios out there. Takes care of alternator and engine noises and you only need to route one wire to the fusebox or the battery. Ground is thru shield.

I've tried it and it's pretty slick. But my ground is thru a permanent mount. A little different, it's at the antennas feedpoint, not broken up into "chunks" of patch cords running around.

Works great for radios like the 2510 that always had alternator whine, grounding everything at the antenna mount takes care of a lot of that problem and you only need one wire to the fuseblock.

As far as the "Salt-bucket" I've found some water softener salt down the center of the pipe that's pounded into the ground along with some water helps for base antennas. Re-watering the salt pile helps when skip is rollin' in.

I was responding to your earlier post, and I quote
"OK, mudduck, I would really like to hear how you can track a signal in
just a few seconds without any DF equipment. "

The gentleman stated a fact. you do not need all kinds of fancy equipment
in the field to do a rough directional estimate.
all you need is 3 people with HT's, you remove the rubber ducky, turn the
volume up and the squelch up, and start turning slowly with the radio
pointed out. when you are close to the direction the signal is coming from
you will hear it.
peice of cake.

Notice I said 3 people, 3 as in tri, as in triangulate. We use this in fox
hunts all the time. Like one young man who decided he wanted to make some
rather vile threats against another young man who went by the handle
"cobra".

Cobra lived across the street from me, he had a cobra mobile hooked to a
power supply, with a mobile whip mounted on the peak of the gable end of his
house. All he wanted was to be able to talk to the locals. Cobra was a very
well mannered young man, who asked good questions and had alot of interest
in the radio hobby, and was studying for his technicians test. This other
young man just moved into town, his father had bought a base radio and a
mobile for his sons car. This other young man would drive around and make
threats to rape "cobra", and other vile threats. We had recorded the
threats, and using the prior mentioned method, we tracked the signal to the
house the transmisions were coming from. One of the locals that hangs out
with us on CH 13 is a Lt. on the local police dept. we called him and told
him we had located the person making the threats. Because threats of

violence were being made, this was a local criminal matter. Lt. Brown met us at the persons house in the street, we went up to the door and the young mans father came to the door, the tape of his son making the threats were played for the father, he called his son down and confronted him with the situation. He made a full confession, and the young man apologized publicly on the air to "cobra" and all of us that hung out on 13, he also apologized in person to "cobra". His father then sold all the radios as well as his sons car. He said that a radio is a responsibility, and if he wasn't responsible enough to operate a radio properly he sure as heck wasn't responsible enough to drive a car. I ran into this young man a while back, he had just left the military service, and has now become a mature young man.

Hello & Good Morning Frank & Doug,
Yes, while I have installed filters concerning you
two, I do see an occasional reply with something
from you guys. I must say I am impressed with
Franks fortitude, boy I tell ya, I haven't said a
thing about him in weeks and he still thinks of me.
Now Doug, this is a whole other novel and it
keeps getting longer each time.
Now for the rest of the story..... Since you
two can't ever post to topic, change nics every
other second, flood newsgroups, think your own
crap doesn't stink, the "I know you are, but what
am I?" school yard mentality, I have decided, with
probably great fan fare for you, to only visit this forum
on a occasional basis.
So when I come back on here, see all the references
to me, I will know that you just can't seem to understand
something.....
..
.....
....
.....
....
While this was fun here, you two have seem to make this
your life, you are both out here 24/7 waiting to respond
to every post, with what ever type of dribble and nonsense
that fits your ideals and no one else's.
So go ahead and respond Frank, I won't see it unless
someone quotes it in their reply. Doug, well do whatever
you want, you really are a sick person, honestly, I
believe you have some mental problems and you should
try to seek help.

Flame away gentleman,

Landshark

I have hard time deciding which handheld to buy. I have nailed down my decision to the Danita 608 and Alan 42, both in the 40 channel AM/FM version.
My question is: which one is better performer? Alan 42 has more accessories, and Danita has more features. But performance-wise, which one does a better job?
If you want performance, forget the handheld. You would do better with a gel-cell and a decent mobile. Handhelds are not built for any kind of 'performance'.
Forget the radio, it's all in the antenna.

I can not believe that there isn't anyone out there that has one of
these old Cobra (AM/FM/CB/Cassette) units sitting on their shelves.
As for th Hardly Drivable (opps, Harley Davidson) units, they are
multiple units with a seperate AM/FM and either cassette or CD player
and seperate CB unit. Besides, when you buy from HD, just to have the
HD logo on it, raises the cost quite considerably.
The other problem is that within the Cycle sound housing that fits on my
Vetter fairing, there is very limited space. I have tried to find a
sutable location in the fairing for a seperate CB, and without doing
major fabrication (that would take away from the restoration value),
there is just no place to work this out.
There is also one other thing that I had installed on my old unit. I
went to a Marine supply store and found a flip upcover that fits behind
the face plate and keeps the rain off the front of the radio. I must say
that it worked like a champ.

Greetings!
Sparky, the only thing we can point out is...
This is an open forum. We do follow guidelines here. Anyone paying good money to have access, desires to be able to openly talk about anything and everything. To keep it categorized, the USENET is set up in a hierarchy structure to keep the mess contained.
So far so good.

If people want to discuss the topics of radios, they are supposed to be allowed to - without harassment or spamming. What may be illegal in one region, does not mean it's illegal in other areas.

OK. Hang on here Andy, While you are correct in one sense - yes, FM is allowed in Europe and not in the USA - you are misleading in another sense. The commonly trafficked export radios and amplifiers are not legal for use by unlicensed individuals (which is what rec.radio.cb is topically dedicated to) ANYWHERE on the planet.
The endless discussions about what "box" can pump out more watts serves NO audience -

"You are so ignorant you give off an aura of stupidity. There are many topics that "serve no audience" that you may agree with. So what? You again are trying to censor speech content and you can't do it and it has driven you mad."

except pirate radio operators.
The for sale ads for amps and 25-32 Mhz radios serve NO buyer except pirates.
If it's an illegal topic,

"Stupidity reigns supreme in your genetic makeup, eh? Illegal topic. LMAO!!!"

either avoid it or take up flaming via Email.
No. I submit to you this alternate concept. IF YOU NEED TO BE ILLEGAL AND TRADE ILLEGAL GOODS, SERVICES, ADVICE, CRIMINAL FELLOWSHIP, ETC. then do it by email. Hows that?

"Your problem is you think talking about it is illegal. You are wrong. You want it to be illegal so bad you can taste it. Speech Nazi, that's what you are."

If it's something up your alley, then feel free to discuss this - openly. If you get flames, and we all do, it should stay on the topic and not bring in the relatives or bodily functions.

The bandwidth is for the CB radio realm, which does include *any* type of free and open discussion about CB. Keyword *UNMODERATED*.
OK, then you agree it is open to all. That includes the opinions of those who disagree with the illegal majority. Live with them. The flames and flooding too. Because "it's an pen forum".

"Fine, except when they violate the TOS. How about the kids that read this? Your last minute attempt at an excuse that "You guys use foul language" is just that, an excuse. Although the "F" word is thrown around here and there, never, and I repeat NEVER, have I ever seen such blatant, disgusting, vile, pornographic trash on rec.radio.cb until you came around."

What I don't want to read is stuff that even I would be embarrassed to post.
If you wish, or anyone for that matter, wish to discuss legal aspects, and have it moderated for legal issues, then feel free to petition USENET for such a NG.

No....if you wish to have ILLEGAL RADIO as a focus, try alt.radio.pirate.

"Trying to dictate how others should act and what they should do. Must eat you up that you haven't attained the rank of dictator of your own living room yet, eh?"

This was a "moderated" NG until someone pointed out that the charter suggested "open and free discussion". Meaning you can't flame someone for something that is considered a part of the open and free discussion this NG is created for.
"Praise openly, Flambe Privately"

We appreciate your peacemaking intentions Andy, but you clearly want the "solution" to favor one camp and penalize the other.

"Nope. Just the one that nobody wants you associated with."

You really like to temp fate don't you Twisted? You didn't seem to learn much from the last time I can see. You looking to dance with the devil once again or do you enjoy making a fool of yourself? What a ding-a-ling! You already proved to the total satisfaction of this news group you can't prove anything, particularly when it comes to analyzing news group posts. So I would really like to see you prove that statement above, that I quoted from your post, without you looking like a court jester, or a circus side-show clown act. Of course you have already been caught doing the same thing, posting forged posts and masquerading under different screen names, now haven't you. That's how you fell out of grace with just about everyone on this group a very short time ago. Remember?

Pick up some Uniden PC510 radios and some Wilson Lil' Wil antennas. This
combo is cheap and it will let you get out about three or four miles.
Go to Radio Shack and get some cigarette lighter plugs for easy plug-in of
the radios.

>topics that "serve no audience" that you may agree with. So what? You
>again are trying to censor speech content and you can't do it and it has
>driven you mad."

If censoring speech gives you hives, then why are you attempting to censor posts that read, for example: 'TWISTY IS AN IGNORANT FUCKHEAD"...or "TWISTY BLOWS DEAD RATS"?

You can't have your cake and eat it too, clown-boy. Either free speech is truly free or your anarchist bullshit is just that...bullshit.

>
>
> except pirate radio operators.

>

>"Stupidity reigns supreme in your genetic makeup, eh? Illegal topic.
>LMAO!!!"
>

We didn't say "illegal topic", that was your poor quoting skills.

> either avoid it or take up flaming via Email.

You feel you have a right to break FCC laws and brag about it on the NG.
We feel we have the right to call you A FLAMING ASSHOLE using as many posts
as we feel are necessary to communicate it. So it violates TOS rules. So
what? You support violation of FCC rules.

>No. I submit to you this alternate concept. IF YOU NEED TO BE ILLEGAL
>AND TRADE ILLEGAL GOODS, SERVICES, ADVICE, CRIMINAL FELLOWSHIP, ETC.
>then do it by email. Hows that?
>
>"Your problem is you think talking about it is illegal. You are wrong.

Here we go again. This is where you embarrass yourself. Show me where we
said talking about illegal CB was illegal.

>You want it to be illegal so bad you can taste it. Speech Nazi, that's
>what you are."

Then you agree people should be free to call you A MAGGOT INFESTED DICKLESS
TURD in the NG.

>
>If it's something up your alley, then feel free to discuss this -
>openly. If you get flames, and we all do, it should stay on the topic

Er, no, turd-bag. Mopar got Sparky fired from his job for no reason at all.

"Uh, they keep you out of the loop these days. It was a joke, Dogie, a joke. Never was any kids, never was a job."

If we were Sparky, we'd be pissed enough to do almost anything.

"No you wouldn't. I drove you underground back in January and you have been hiding ever since."

Why, we learned that from you, Dogie. He has you to thank. You tried to patrol the speech content here and it backfired.

No, fungus-brain

"No? It didn't? Then why did you stop your favorite pastime all of a sudden, you know, spamming the group with repeated multiple vulgar posts? "Cause you wuz spanked, that's why. Again, you lose."

YOU keyclowns are the ones who can't take a little critcism.

"Don't know. If you label something, it has to be good. Critique away. Just keep the porn and spam out of it and I will reduce you like I always do, which is what drove you off the edge in the first place."

Now
why aren't you on the air?"

Because your local channels here sound like a barrel of monkey shit. It gets boring after 5 minutes hearing all the big boppers

"Son, 'round here I AM one of the big boppers. You think maybe I always used "Twisted" on the air?"

I have had that happen a few times myself, living next to a major expressway like Interstate-75. I just went to my local Radio Shack store and got some of those "snap-on" ferrite cores for a few bucks each. Put one on each line, including the speaker cables, coming out of the sound card in the computer. Locate the core as close as you can get it to where the cable enter / leave the back of the computer case. This so far seems to have fixed the problem for me. You may also want to do the same thing for any lines connecting to an internal modem too.

Oh like you are going to pinpoint a signal in a few seconds from a single
location. without moving
to confirm the location that is retarded all you get is a general direction
you still need to do the leg work.

If you was local I could track your signal before you got the componants
together to build your tracking device.

All I need is a radio with a meter.

Quack!

599. Re: Hey Twisty

Newsgroup: rec.radio.cb
Date: 2001-06-06 21:40:07 UTC
From: twistedhed@webtv.net
Message-ID: <17568-3B1EA337-53@storefull-128.iap.bryant.webtv.net>
Source record: 84687

You really like to temp fate don't you Twisted? You didn't seem to learn much from the last time I can see.

"There is that arrogance thing again. What, Leland? What was I supposed to have learned? That you can't even forge properly and get away with it? That false reports to my ISP is supposed to upset me?"

You looking to dance with the devil once again or do you enjoy making a fool of yourself? What a ding-a-ling! You already proved to the total satisfaction of this news group

"Once again, your disabilities render you incapable of grasping the concept that it isn't I who care about what everyone thinks, it is you, which is why you try so hard under so many different names."

you can't prove anything,

"Don't have to. If you were innocent, you would have had nothing to argue.Your anger is eating you up, and for good reason. I called, you came running. You are guilty, Leland, guilty, and that is my opinion. I knew you were out there playing games, so did others. Do a search Leland, and couple your name with Doug so you can see I wasn't the only person that paired your name with his. What, let me guess, you saw me mention that loopback from Michigan and you just appear for damage control, hmmm? That was like a shiny 16 oz shark lure I knew you couldn't resist. I just wasn't sure, but I am now. That is my opinion, and I am sticking to it. But I do like how your anger made you so flustered you babbled "You PROVED that you can't PROVE anything." That's a classic, Leland. Just like last time. Bust yourself with a stupid mistake and take it out on me."

particularly when it comes to analyzing news group posts. So I would really like to see you prove that statement above, that I quoted from your post, without you looking like a court jester, or a circus side-show clown act. Of course you have already been caught doing the same thing, posting forged posts and masquerading under different screen names, now haven't you.

"Uh, no, well, a few times in 99, maybe once in 2000 when I asked about some tech questions in order to....never mind, you couldn't understand."

That's how you fell out of grace

"You mean I was in someone's grace? Who dictates when someone is in the ng's "grace"? You? Doug? Who, Leland, who? That's what this is all about, isn't it Leland. Dictating and saying who feels what, and who can talk about what? I want to know, Leland, who dictates who is in good

graces with "the ng." Do you consider yourself part of "the ng?" How come you aren't in any of the other rooms? How come you aren't on any of the regular emails when MOST of the regular posters in here receive them? Inquiring minds really want to know, Leland? Can you teach me how to see who else in this "grace" club? Is it sort of like the ng you and spark and dogie and our finnish acquaintance tried starting? Do tell, But take a deep breath and relax."

with just about everyone on this group a very short time ago. Remember?

"Uh, no. I don't. But I'm sure you will dance to whatever tune I play and get you to demonstrate it for us. You sure hold grudges Leland. Just because you forged me here and aligned yourself with some type of anti-cb group and things don't go your way, you take it out on me. Hey, like I told Prozac and Dogie, we can discuss, argue the merit of radio and laws pertaining to it 'till the cows come home, but if you play games with me through your various posting abilities, don't blame me when I dump it back in your lap."

Twitsie, I love CB Radio, I don't know about you, but your ignorance laden post prove you to be quite the dimwit. I havent hacked anything you nimrod that is another fine example of your intelligance we know your cb radio skills are severly lacking but your rambling post are laden with Bullshit. I can and will disagree with you because you are easy to disagree withyour views are distorted at best. I have resorted to the same tactics you have I don't flood post, I don't post porn Your really not even fun to slam because your replys are unreadable, un comprehensible and down right stupid,. If twistie thinks it, It must be so. The funny part is watching you blame innocent people of doing things in the Ng and thinking you know how to read headers and the off topic posting of headers at every attempt to show your the man, "hey check this header out boys". The funny part is I don't want to hear you reply to me It will be the same stupid
dribble. So as far as I am concerned you are out of my recieve, I just put you on hold. My direct replying to you is on Hold I will still talk about you at wil though.Turn on those Radios.

Ahh the joys of running Linux, 95% of all viri are geared to windows
machines.

If you do run windows, using outlook express is not the wisest choice,
for email use eudora, and for usenet use agent or some similar program.
Outlook will aouo open attatchments many times, especially images, and
yes you can insert a virii into an image file. Ans in windows if a file
has two extensions only the first shows up so if I sent you
my_girlfriend.jpg.exe all yours machine would see was the jpg, you might
try to view it and wham you are infected.

Well Doug,
What ever you want to fantasize. I am not
even going to bother anymore, you win, that's
right, you win. You and Frank don't want to
discuss radios Illegal or legal, all you guys want
to do is throw out accusations, insults and crap
along those lines. So again, you win, you'll post
some sort of spew just like this one, but what
ever you want, you are not a radio operator......
Your a child with a computer.

No. It came to my hotmail address. I had no intention of
actually downloading it, but something told me it had a
virus. Hotmail always checks attachments before you can
get it. That name was displayed on my screen when I tested
the file. It was trashed like the 15 other spams this morning.

621. Hello Long Hall Man

Newsgroup: rec.radio.cb
Date: 2001-06-06 23:41:49 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3B1EBFBD.D40086E@qnet.com>
Source record: 84760

Hello George:

Your typing is hard to read, big time. And your e-mail is bouncing!

Vertical Elements lengths for 10 are:

V1 = Bottom tubing 72 inches, 1&1/4" OD.
V2 = Second length 55 inches long, with 50 inches exposed, 1 & 1/8" OD
use Tiger Clamps.
V3 = Third tubing 48 inches long, 45 inches exposed, 7/8"OD, #12 clamps.
V4 = Forth tubing 48 inches long, 40 inchs exposed, 5/8" OD, #6 clamps.
V5 = Fifth tubing 72 inches long, 36 inches exposed, 1/2"OD, #6 clamps.

Total length from the bottom of V1 to the top of V5 is 243 inches.

Adjust Longer Trombone Tuning Rod to 48 inches, shorter Trombone to 24
inches, to start with.

Adj the longer Trombone first for the lowest SWR, on 8.7 then adjust the
shorter Trombone to a 1 to 1 SWR. You half to repeat the process a time
of two, but will be able to get it dead nuts on.

Jay in the Mojave

PS: Dump your ISP server. E-mail me.

Twitsie, I love CB Radio,

"As do I."

I don't know about you, but your ignorance laden post prove you to be quite the dimwit.

"Coming from you, it's breaking my heart."

I havent hacked anything you nimrod that is another fine example of your intelligance

"er, that would be i-n-t-e-l-l-i-g-e-n-c-e. And if I was mistaken and that wasn't you, my apologies. It still doesn't justify your attitude."

we

"(Sigh) Maybe you can answer, who is "we"? Doug says "we" all the time, so it is pretty apparent that you, Prozac, have also aligned yourself with some type of anti-contingency Doug belongs to, no?"

know your cb radio skills are severly lacking but your rambling post are laden with Bullshit. I can and will disagree with you because you are easy to disagree with

"Wait..you disagree with me because I am easy to disagree with? I didn't know it was such a challenge to some of you to have opposing viewpoints."

your views are distorted at best.

"Ah, but they are MY views, so aything you say is an opinion, and duly noted as such."

I have resorted to the same tactics you have

"About time. You are not hiding and you are debating what seems a legitimate belief on your behalf, I can respect that."

I don't flood post, I don't post porn Your really not even fun to slam because your replys are unreadable, un comprehensible

"Again, considering the source, it is duly noted."

and down right stupid,. If twistie thinks it, It must be so.

"Nope. I give credit where credit is due and the benefit of the doubt. I also have no problem extending an apology if I am wrong. Difference is, I ain;t here to 'cause mayhem, which you evidently are. You come at me

first and get upset when I return fire. I offered for you to take your problem to email, but you would prefer to argue here and off topic. Why?"

The funny part is watching you blame innocent people of doing things in the Ng and thinking

"Ah, I don't read them, just post them."

you know how to read headers and the off topic posting of headers at every attempt to show your the man, "hey check this header out boys".

"Never occurred."

The funny part is I don't want to hear you reply to me It will be the same stupid dribble.

"Sure you do, which is why you chose to come at me here instead of in email."

So as far as I am concerned you are out of my recieve, I just put you on hold.

"With what? That girlie truck with the gaudy radio equipment?"

My direct replying to you is on Hold I will still talk about you at wil though.

"You will read every word I say."

Turn on those Radios.

"Still can't hear you here. But Moses on the coast evidently did. He said you were "laying in a chalk line"' when he keyed down, and you know what? He was right. He was all over the country. You still ain't getting beyond the 'hood, but I am listening."

Why is it that the AntiWhateverWordOfTheDay Armada, and those that wish to ally themselves with them, never seem to answer any legitimate questions from "legal" CBers that are posted on the group? They seem to gloss over these questions without helping, all the while promoting "legal" CB, and tend to take aim only on those questions that they consider "illegal". Could it possibly have something to do with the fact that they know nothing?

None of those matter, unless you are getting signals bounced off off
various obstacles that produce false directions.

Running into a repeater would not aid your attempt at deception, and the
hunter would not look at the output signal of the repeater. They would look
for the direction of the input signal.

In general, DF work is easy. It may take a lot more than a few seconds, if
the person is mobile, but even mobile stations can be tracked down in a
surprisingly short period of time.

Very true.

>all you need is 3 people with HT's, you remove the rubber ducky, turn the
>volume up and the squelch up, and start turning slowly with the radio
>pointed out. when you are close to the direction the signal is coming from
>you will hear it.
>peice of cake.

Just to play semantics for a second, if you use a receiver to
radio-locate, then you are using it as radio-location equipment,
however primitive.

>Notice I said 3 people, 3 as in tri, as in triangulate. We use this in fox
>hunts all the time. Like one young man who decided he wanted to make some
>rather vile threats against another young man who went by the handle
>"cobra".

The RDF that I will be posting will provide a vector. Two (not three)
of these vectors will triangulate on the location of the transmission.
That is what 'triagulation' means. And it takes only a few seconds to
cover a 5 mile radius. Like I said, the two don't even compare.

Please wait until the page is up, and you will see the difference. Or
do a web search for RDF equipment.

I scan through these posts daily and can't recall very many genuine posts regarding regular CB. Tons of name calling and slamming but very few questions about lowing swr, mounting transceivers, connecting to the battery, problems with engine noise, etc. I for one am more than willing to attempt to assist new guys with real issues, but it is hard to get around it all when their first post begins something like, "I'm new to this and have never had a CB before. How many alternators do I need to mount to run the kilowatt amp I just bought?" There ought to be a law which requires the CB purchaser to at least glance at Part 95 before keying up.

642. Re: PC Speakers Broadcast CB Radio Signals...

Newsgroup: rec.radio.cb
Date: 2001-06-07 03:13:02 UTC
From: The Packrat <spam@n7uic.net>
Message-ID: <2jCT6.121279$p33.2578481@news1.sttls1.wa.home.com>
Source record: 84779

Is the sound bring transmitted across the internet or is it just at the speakers. I find this odd because all of our offices are on major highways and we never hear a squeak from CB'ers. But we do get noise from the 3 TV towers 1 mile away. The people that complain about it get clip-on ferrite blocks on all the cables in and out of the computer.

The offer is appreciated, but refused. This is a personal issue which
will be resolved as such. Let's just say that I keep a very unique
photo album. No additional resources are required.

However, I wonder what the FCC will do after they confiscate a nice
old Collins? Will they crush a fully-functional ham radio just because
it is used on 11m? Seems a shame...

Let us review:

1. You asked for a carrier, flight number, time and gate.

2. It was provided to you. (PS> The "no gate info" excuse is lame. All you had to do was enter the terminal and match up the flight number with the gate on the video screen)

3. You did not show.

4. Colonel Sanders has a job for you (BUK BUK BUUKK!)

Randy, You don't know shit from shineeola.
Ask jerry Smith from Delaware the latest CB casualty about his $17,000 fine.
I know what happened to him because I know him personally I didnt assume
like you. So keep kidding yourself about The FCC, yeah they won't do
anything. Thats just what he thought. Don't forget 27 mhz is the CB band.

Give twistie a break! He fishes the bay, works the radio at all hours,
then comes back here to spread his wisdom on all those 'publications'
and the newsgroups. Hey, that's hard work! So do you really think he
earns enough to put him above the poverty level? Not as a journalist,
that's for sure. With that kind of money he can't very well afford the
gas to drive very far. Now if you offered to reimburse the cab fare...

You know nothing about my league why dont you step up to the plate, see who come out on top. Ill make it interesting for you $2500 if you can find me thru DFing or my location. This should cover your travel expenses So you should have no excuse as to why you cannot find me. I have played this game before you will lose. So what do you say Lets see who's league your in besides the Minors. Dont forget to shut off your CB otherwise dead battery.

>Thanks,
>Miles

Sorry about the sarcasm. Anyway, I like to shunt the shield at about
1/6 wave from the antenna, 11m is about six feet. For a base run, I
bury the coax if at all possible, and set ground rods at both ends of
the run. Speaking of ground rods...

This may sound nuts, but I have never had to replace a gavanized
ground rod. Copper may be a better conductor, but they don't seem to
hold up as well in the long-term. This might be due to the soil around
here, I don't know, but it's something to think about.

It would not work on mine.
There is a mod where you have to remove an internal wire to get into the 240 channel mode. I`m sorry, but I sent the mod info along with the radio when I sold it and never made a copy of it.
I can`t believe that no one on here knows the mod.
Hopefully, someone has responded directly to you.

673. Re: TWISTY SAYS WE ARE FREE TO CALL HIM A FUCKHEAD

Newsgroup: rec.radio.cb
Date: 2001-06-07 15:23:29 UTC
From: twistedhed@webtv.net
Message-ID: <7731-3B1F9C71-48@storefull-123.iap.bryant.webtv.net>
Source record: 84717

You feel you have a right to break FCC laws

"No. Those are your words for anyone that doesn't bow down and conform to what you think is proper radio etiquette."

and brag about it on the NG.

"There is a difference in bragging and posting information. I never bragged about anything. MAtter of fact, you blew my horn for me, several times."

We feel we have the right to call you A FLAMING ASSHOLE

"AS that is your right, even though the vernacular you choose shows your intelligence."

using as many posts as we feel are necessary to communicate it. So it violates TOS rules. So what?

"So you will continue to be reported for violation of usenet TOS."

You support violation of FCC rules.

"Again, I do not "support" anything you profess. It is your ignorance and shallowness that prevents you from comprehending what the difference is."

No. I submit to you this alternate concept. IF YOU NEED TO BE ILLEGAL AND TRADE ILLEGAL GOODS, SERVICES, ADVICE, CRIMINAL FELLOWSHIP, ETC. then do it by email. Hows that?
"Your problem is you think talking about it is illegal. You are wrong.

Here we go again. This is where you embarrass yourself.

"I don't embarrass myself, son, only others like you that think you are someone."

Show me where we said talking about illegal CB was illegal.
You want it to be illegal so bad you can taste it. Speech Nazi, that's what you are."
Then you agree people should be free to call you A MAGGOT INFESTED DICKLESS TURD in the NG.

"Absolutely."

If it's something up your alley, then feel free to discuss this - openly. If you get flames, and we all do, it should stay on the topic and not bring in the relatives or bodily functions. The bandwidth is for the CB radio realm, which does include *any* type of free and open

discussion about CB. Keyword *UNMODERATED*. OK, then you agree it is open to all. That includes the opinions of those who disagree with the illegal majority. Live with them. The flames and flooding too. Because "it's an pen forum".
"Fine, except when they violate the TOS. How about the kids that read this? Your last minute attempt at an excuse that "You guys use foul language" is just that, an excuse. Although the "F" word is thrown around here and there, never, and I repeat NEVER, have I ever seen such blatant, disgusting, vile, pornographic trash on rec.radio.cb until you came around."

CHECK OUT YOUR

"Again, not mine. And since you can't tell the difference, I'll let you in on a little secret, genius. There are two of them, not one that were busting your chops. Look closely, one is "1mangang", another is "lmangang." But in your fear and hysterical way, failed to notice any of that and just blame me because I was the one who reduced you to cb fodder."

POSTS AS "1MANGANG".

"Total atttempt at self-justification, as in playfround tactics.."he did it so I can, even if it's wrong. Again, you started ALL of it Dogie, and criedwhen it came back on you."

What I don't want to read is stuff that even I would be embarrassed to post.
Is that why you used the 1mangang alias?

"Hahahaha! Oh, are you swift? What were you saying about my ablity to quote? I didn't write that, but I agree with it...hahhahaha!"

If you wish, or anyone for that matter, wish to discuss legal aspects, and have it moderated for legal issues, then feel free to petition USENET for such a NG.
No....if you wish to have ILLEGAL RADIO as a focus, try alt.radio.pirate.
"Trying to dictate how others should act and what they should do. Must eat you up that you haven't attained the rank of dictator of your own living room yet, eh?"

Right. No dictators. Freedom all the way. Nothing is unfree. So you agree that we are free to call you A FAGGOT FUCKHEAD in this newsgroup?

"I already stated that I agree with your right to show your lack of intelligece and ignorance, yes I do."

This was a "moderated" NG until someone pointed out that the charter suggested "open and free discussion". Meaning you can't flame someone for something that is considered a part of the open and free discussion this NG is created for.
"Praise openly, Flambe Privately"

We appreciate your peacemaking intentions Andy, but you clearly want the "solution" to favor one camp and penalize the other.
"Nope. Just the one that nobody wants you associated with."
Who wants to be associated with Twistedhed?

"And here is your arrogance once again. This is the part I love, even though it is old. "Who wants to follow me and Spark and start our own group?"...cried the lowly ham operatot N8wwm. "Who wants Twisty out of the group" cried Sparky. "Who will follow us to our new group"...cried Frank. "Why won't anyone come?"..cried spark. "Twisted must go" stammers Dogie. "If twisted leaves, Ill stop spamming the group"..was dogies pathetic attempt at blackmail. LMAO!!! I consume your world, Dogie. You're my cb property!"

Why would you have to reload your entire system after dropping
Earthlink as an ISP? I see no reason for this, could you explain?
Mr.K.

PS>The fact that Sprint Corporation bought out Earthlink has
absoulutely no bearing on this either.....trust me.

CB's: Mobiles - would prefer to sell as a complete package for $400; all are like new and work perfectly and include handheld microphones. No scratches or dents. Package is: Cobra 148 GTL (AM/SSB) with built-in freq. counter; Cobra 18 WX ST (AM); Cobra 25 WX ST (needs power cord); Maxon MCB 445 W; Midland 77-120 ESP2; Realistic TRC-465 (AM/SSB). Shipped postpaid and insured.

Older CB mobiles: Pace CB-143, 23-channel with microphone. Fair condition, works. $25 firm, postpaid; Royce I-600B 23-channel mobile with microphone. Fair condition, works. $24 firm, postpaid.

CB Walkie-talkies:
One pair of classic Realistic 40-channel TRC-216; minus "dummy batteries" in excellent condition with manual. $75 firm, postpaid and insured.

One pair of classic TRC-206 Realistic 3-watt, 3-channel CB walkie-talkies. Excellent condition, both work. No manual. Includes one transmit 27.125 and one receive, 26.670 crystal in each unit. One is minus hand strap and both need "dummy" batteries (can still use today's NiCads). $75 firm, postpaid and insured.

CB Base: Texas Ranger 696F SSB base, excellent condition, no scratches, in original box with manual and works perfectly. $300, postpaid and insured.

Classic Base CBs:

Uniden Washington AM/SSB base, in original box, manual, bracket, microphone, no scratches and in excellent condition. Works perfectly. $300, postpaid and insured.

Regency CCR-142 AM 23-channel base with handheld GC Electronics power mic. Checked out five years ago and worked. Probably needs tuning. $50 firm, postpaid.

Lafayette HE-15, 5-channel base with push-to-talk switch on CB case; needs a microphone. Checked a few years ago and worked, but probably needs tuning and switch cleaning. $75 firm, postpaid.

Lafayette HE 20A 23-channel base CB, needs original mic, but I will include a Courier CMM-1 handheld mic (minus connector). Checked a few years ago and worked, but likely needs tuning. $75 firm, postpaid.

Contact Harold at this email address (catchthewaves@aol.com). Postal money orders only.

There are a number of reasons but the easiest to explain is what is done to
the Explorer/OE combo. If, for example, you want to click on a link in an
e-mail or newsgroup, you will be told
that there is a program missing -- and it is, permanently. In the world of
Earthlink you do things one at a time. If you want to get the Gil Bates
products back to sanity, the only choice is a re-install.

I think I should draw a distinction between Earthlink which may, for all I
know, function as a decent ISP. But their supplied software is deadly and
full of idiocies like putting my area code in South Dakota (Nebraska does
not exist) and getting all pissy when you do not give it multiple phone
numbers when only one exists in their files (customer service gives you more
but changing it is a bitch). The supplied software also does not support
newsgroups.

Dick N�BK

Not arguing anything Twisted, other than you're a loser. People on this news group have had more than their fill of your vile rants. You can't prove anything because you're an idiot, and your just going to prove it one again. I don't know how many times I, and others here where I work, just chuckle out loud at your stupid attempts to prove who posted what under what name. More than that you turned yourself in to a news group joke, which really required a lot of effort on your part no less, congratulations. Of course the big tip-off for you Twisted should have been the TOTAL lack of support, from anybody with a brain, that agreed with any of the pathetic allegations you made regarding me. In fact just the very opposite happen. Several people told you that you were flat out wrong. Of course being the stubborn idiot that your are you finally had your head handed back to you, after which you quit your crap for a period of time. But alas you seem to have a very short memory, and came back looking for more trouble.

People should feel sorry for you Twisted because Doug pulls your strings and gets you to perform like a master puppeteer for the groups collective entertainment. Since you continue to let him "play you" I would have to guess you like it.

Let's just stop right here and cut through all the rest of your adolescent name-calling schoolyard bullshit and go right to the issue.

1. Do you break FCC laws/rules/Part97 by "freebanding"?
(Either you do, or you don't. There's no grey area. None at all.)

2. Do you feel you have a "right" to freeband?
(Your article in Sporadic Waves and your many, many posts here in the NG say YES)

That's just two questions for now, but these are enough to keep you squirming like a worm on a bent hook, huh?

That's kind of funny... I have never had a problem with that. My Outlook Express ALWAYS shows both supposed extensions. Apparently you were using an old outdated version? Keep your software up to date, and have yourself a nice little virus program running... Eliminates practically all your chances of getting a virus..

I myself have never had a virus, though my computer has received a number of them in emails as well as off of newsgroups... My Norton scans the emails or news messages for viruses as it downloads them off the server(s). Catches any virus or Trojan before I am even able to view the email or post...

Guess your just not secure enough, huh? Never a problem on my end... NEVER...

I am offended by the off topic, profanity laced posts in the NG. "I love Cb radios too." I think its tit for tat. If they want you to abide by NG TOS I think everyone will have to adhere to usenet policy. So how is your CB doing today?

You have been found doing all of the above Twisted, which was documented and posted on this news group. After the above evidence was posted you promptly disappeared from the news group for a while, with your tail pulled up tightly between your legs, only to come back for more. It seems like you really enjoy being the news group "official" clown. People pull your strings, and press your buttons, then you reward the group by dancing and making a fool of yourself once again with your crack-pot proof and theories. Who needs to watch a sitcom on TV when they can come here and laugh at you Twisted. Why do you think Doug is always after you? Answer because your so "entertaining".

Well Dwight, go back and read my first post on this topic. Yes, I have over a hundred countries. Yes, I did the majority of contacts on the freeband. All contacts were made between 25 and 27.995. Most times it was 12 watts out on the sideband. This is not a miracle or even really all that hard when the conditions are on. I seem a bit perplexed as to how, and why, a licensed ham can not perceive this or come to a realization that many folks have over a hundred countries in their logs
running nothing but legal power. It just isn't that big of deal. Sure, it takes patience and lots of radio time, but....you are still wrong.

A ham, huh? Let me add my 2 cents. I live and play in Tampa Bay. I have
over a hundred countries myself(ALL contacts made between 25 and 27.995)
with the cards to prove it. So I know 112 countries is not only possible, it is probable. I don't have a beam, only a Maco 5/8 GP about
46 foot in the air. The most power I have run is 100 watts(which is VERY
rare, only to get a QSO card from a rare or exotic locale) and most were
made with 12 whiskey out on the side. I do know that the amount of water
that surrounds my state plays a part, but I am a driver who routinely talks DX from my mobile rig out of state and country when I am on the road. Get with a free-bander who knows his stuff. Sounds like the guy with 112 countries can teach you a thing or two about propagation!!!

Morse Code is officially DEAD. There will be no official monitoring by any government stations here or abroad. Technology has put this horse to
pasture. In short, Morse code has outlived it's usefulness. My personal
prediction is it will eventually be done away with altogether as a

requirement for full HF privileges. IMHO, broaden the voice allocation bands and retain a portion for those who wish to carry on with their cw
contacts. Personally, I could care less WHAT they do. I 'm a freebander.
I know the risk and accept it. All you RF cops, save the flames.....it's
water off a duck's back.

==========
From: twistedhed@webtv.net (twistedhed@webtv.net)
Subject: Re: Kasupski admitts to freebanding!!!!!
Newsgroups: rec.radio.cb
Date: 1999/11/07

First off, let me state that this post is of my own personal opinion and
is no way connected or endorsed by Sporadic Waves. I am a monthly contributor to the Magazine, The editor/publisher graciously allows me a
column each month. I also write for several other publications. The groups of people I have met and QSO'd with through the magazine are terrific. No one advocates the interruptions of any others transmissions
or intentional jamming, no matter WHAT some others may post. I am a freebander. It is what I do. It is what I write about. Spare me the flames of my responsibilities to radio and upholding the law. I have been doing what I do since the early 70,s and that is what I write about. It is my choice and I willingly accept the consequences should the time arise. I do not splatter the spectrum with a gazillion watts nor am I rude on the air. I talk all over the world between 25 and 28 megs. and usually with no more than 12 whiskey out on the side. My reason is simple. I have no interest in a repeater rebroadcasting my signal. I achieve the same results as the "big hams" at a fraction of the cost. I know many fine hams and I respect what they do. My choice is
my own. I do not interfere with other operators and my QSO's are usually
limited to a quick exchange, long enough to exchange cards. The fact that a magazine can raise your ire by containing stories and modifications not endorsed by our Uncle Sam is absolutely fantastic. That is what makes America great. One may not agree with what one reads
or hears, but that does not mean the others view point should be censored or condemned. It is all about knowledge and I can not emphasize
that point strongly enough. When you begin slinging innuendo that is unfounded and unproven about a group simply because of its vehicle of media, your own credibility becomes instantly compromised. There are volumes of publications that are of questionable content available. Laws

abound that make many activities legal elsewhere , but illegal here. Does that mean we should not be able to read and learn about these situations? Reading an article by a publication or an author does not automatically mean the content is advocated by such. I don't hold anyone to any set of standards when broadcasting. If you want to act like an idiot, why the hell should I care? There is a channel selector and an off switch. I also espouse the virtues of microbroadcasting. Should that be censored? I am an Independent Radio Station. Please don't
judge an entire organization or even an individual based on a few un-informed posts. Do the research yourselves people. Come to your own conclusions.

Heh, to be honest, I almost had my first attack a couple of days ago. I received an e-mail with an attachment from a trusted source. I clicked on the attachment and, much to my surprise, rather than the normal window opening from outlook express reminding me that attachments could contain viruses, up popped my zonealarm telling me I would be stupid to open this one (and why). I simply trashed it and sent an email to my friend that she'd best check her computer. I always have the firewall up and a virus checker running in background. I do have to agree, however, that having an operating system other than windows would definately give one a warmer, fuzzier feeling!

Let's just stop right here

"Yes, let's. I love feeding you crow."

and cut through all the rest of your adolescent name-calling

"Not even on topic of cb for one sentence and you are lying again. Your subject line is even a lie. And I do not call names unless attacked. I call a spade a spade. Is it my fault you are an idiot?"

schoolyard bullshit and go right to the issue.

1. Do you break FCC laws/rules/Part97 by "freebanding"? (Either you do, or you don't. There's no grey area. None at all.)

"That wasn't what you said. You said I advocated it. You lied, and are desperately treading water now, attempting to back pedal. You said I advocated it. I do not, which makes you a liar, again."

2. Do you feel you have a "right" to freeband? (Your article in Sporadic Waves and your many, many posts here in the NG say YES)

"Show me one, just one post where I said I have a "right" to do so. Show me where in the article I said that. You can't. Again, you lie."

That's just two questions for now, but these are enough to keep you squirming like a worm on a bent hook, huh?

"Not at all, but they were adequate to make you eat crow, again, as usual.
Now, I did you the honor of responding, I would like to ask you: A) Why do you attempt to mask your addy all the time when you post?
B) Do you still pretend you are me around your house since you can't do it here in the cb room anymore?
C) Why do you feel the need to bring gay sex topics into a cb room discussion and why do all cbers who don't follow part 95 to a "T" intimidate you?

Leland C Scott, KC8LDO, wrote:
nothing to argue.
Not arguing anything Twisted, other than you're a loser.

"Well, cominhg from you, it's duly noted as such."

People

"Didn't take long for that concern of yours for the ng and pure caring thoughts about others to surface, eh?"

on this news group have had more than their fill of your vile rants.

"No rants, Leland. You guys cry whenevr you attack someone and they don't lay down. You are still pissed at me for busting you lying over in the hammie forum about forges that you atrributed to me as authentic. Kinda made a guy with a degree in computers a laughing stock when he couldn't tell an authentic post from a webtver, wouldn't you say? That or a liar, which is it? You always avoided that question."

You can't prove anything

"I don't have to prove anything to anyone. On the contrary, it is you and your little anti-cb brigade that is always trying to "prove" something to the ng."

because you're an idiot, and your just going to prove it one again.

"Like I proved you a liar in the hammie forum as well as here? And a forger on top of it?"

I don't know how many times I, and others here where I work,

"Of course you share me with your coworkers. You guys give me worldwide attention. Hell, one of the reg DXers age in here received THOUSANDS of hits since you anticb folks gave it attention."

just chuckle out loud at your stupid attempts to prove who posted what under what name.

"You think I care. I don't care who is who. I post the headers because you think you are getting away with something."

More than that you turned yourself in to a news group joke, which really required a lot of effort on your part no less, congratulations. Of course the big tip-off for you Twisted should have been the TOTAL lack of support, from anybody with a brain, that agreed with any of the pathetic allegations you made regarding me.

"Er, some of those you refer to as "anybody with a brain" were from the ham forums, and are way passed you in the ticket department, so that would put you exactly where on the evolution ladder, Leland?"

they

"They. They, includes you, Dogie, Sparky, and all your aliases, maybe a protozoan-come- lately."

don't In fact just the very opposite happen. Several people told you that you were flat out wrong.

"Yea, ALL the guilty ones, not one unbiased or uninvolved came to your aid, since that apparently means something to you. The only support you get is from Dogie and Spark. That's something to be proud of. Quite an accomplishment."

Of course being the stubborn idiot

"Very nice. The name calling always comes so easily to you anticbers that need alias names."

that your are you finally had your head handed back to you,

"Please remind the group. No one knows to what you refer."

after which you quit your crap for a period of time.

"I ignored you for calling names and failing to stay on topic. You justwanted to argue. It's the same time I quit replying to Sparky."

But alas you seem to have a very short memory, and came back looking for more trouble.

"I never went anywhere."

People should feel

"JC, Leland, not only do you want to tell people how to talk and act, but you want to tell them how to feel also, but we pointed out your flaws (like your inability to learn Morse code) lasttime you funned around with me, didn't WE?"

sorry for you Twisted because Doug pulls your strings and gets you to perform like a master puppeteer for the groups collective entertainment. Since you continue to let him "play you" I would have to guess you like it.

Once again, you show your ineptitude.....go to the FCC website and read
for yourself. Stop the hearsay.

Hey Sparky, in Maryland, the next state over, the best time to yak on
the box is when the skip dies down. That's about 10 or 11 PM.

Most of the CB'ers I have ran into in person say they haven't turned it
on much because there is too much noise.

Excuse you? Are you lost or something... Better go back to the pound so they can reacquaint you with your proper owner... I think perhaps you are just a little lost puppy with nothing better to do with your time that aggravate others..

Where do you get FEMASTER from? My website address?? Where do you get "female master" out of it? Sure, I guess it could be used to represent that. It could be used to represent a lot of things. Don't jump to conclusions, it could get you into trouble... Go pick on your normal bunch of people and leave me of your BS..... I'm here to talk CB radio and it's related topics, and that is it; not to play name-calling, cut-down games with people like you!

(Twistedhed) wrote:

> You posted it Spark, but you evidently didn't read it. Pay close
>attention to this part..

I read it. It was unimportant. Anybody with half a brain can see right
through your fallacies.

>The fact that a magazine can raise your ire by containing stories and
>modifications not endorsed by our Uncle Sam is absolutely fantastic.

First, the magazine doesn't 'raise my ire', your terrible journalism
does. Another point to mention is how you understate the issue that
Uncle Sam does "not endorse" freebanding -- not only does 'he' not
endorse it, but has declared it a Federal crime. And your conclusion
is subjective and unsupported.

>That is what makes America great. One may not agree with what one reads
>or hears, but that does not mean the others view point should be
>censored or condemned.

Censored, no. But condemnation is itself free speech, so your
statement disappears in a puff of hypocrisy.

> It is all about knowledge and I can not emphasize
>that point strongly enough. When you begin slinging innuendo that is
>unfounded and unproven about a group simply because of its vehicle of
>media, your own credibility becomes instantly compromised.

Oh boy!

You say "it is all about knowledge". But while you strive to emphsize
that phrase, you fail to explain it's meaning. And while I agree with
your statement about "slinging innuendo that is unfounded and
unproven", despite the terrible grammatical construction, you have yet
to prove any of your own accusations. Your short and selective memory
has made you forget your accusations that I am Leland, Doug, Glenn
Sparks, etc. You, OTOH, are too obliging in your previous posts,
admitting to everything that I have ever accused you of being or
doing. Have you beat your dog today?

> There are
>volumes of publications that are of questionable content available.

Including "The Wizard of Oz" and "Alice Through the Looking Glass",
both of which contain many references to drug use. Your point is vague
at best.

> Laws
>abound that make many activities legal elsewhere , but illegal here.

They sure do. If you were in a foreign country your freebanding activities might be legal. But so far nobody has posted the country where this is true, not even you, and not even after you spout your phrase, "it is all about knowledge". Your own knowledge, or lack thereof, fails to support your argument.

>Does that mean we should not be able to read and learn about these
>situations?

Your question is moot -- none of your posts or articles was written where the intended readers were students of multi-culturalism or international law.

> Reading an article by a publication or an author does not
>automatically mean the content is advocated by such.

No it doesn't, but that statement doesn't apply to you because you do, in fact, advocate freebanding. There are too many of your previous posts advocating freebanding for you to deny this fact.

> I don't hold anyone
>to any set of standards when broadcasting.

I have never heard your 'broadcasts', but as you know the CB is not legal for broadcasting. If you are refering to your micropower broadcasting station, then I haven't heard that, either.

> If you want to act like an
>idiot, why the hell should I care? There is a channel selector and an
>off switch.

I agree. That point is preached here constantly. And people also have the choice to -not- change the channel and speak their mind. I respect that. You can say anything you want about freebanding or broadcasting or dog-beating or any other illegal activity, but if you do you need to expect that there will be someone that is going to give you an earful. And if you can't handle that, then you should either change the channel yourself, or drop the channel-changing argument.

> I also espouse the virtues of microbroadcasting. Should that
>be censored?

Censorship is not the issue. It is venue. For an extreme example, nobody will censor your opinions in support of satanism, but if you start spewing them at the Vatican, it's a good bet that you will be carted away. And you can cry "censorship" all you want, because you are not being censored, you just picked the wrong venue. Micropower broadcast stations are not censored, and neither is their content. It is the illegal use of the spectrum that gets these stations shut down. That is not censorship, and to make that association is nothing short of a deliberate attempt to confuse the issue using the logical fallacy of 'false cause'.

I should also mention that free speech has nothing to do with making unfounded allegations. You, shark-bait, and more recently, St. Hypocrite, all have this uncanny ability to say whatever you feel like saying, regardless of the truth. And you do so behind what you think is an impenetrable curtain of 1's and 0's. Your arrogance has led you to believe that if you can't understand how something works, then nobody else can either. This is -your weakness- and -my strength-, so please continue to place your ego above your common sense. And continue to think that what you are practicing is 'free-speech', because when you find out that it isn't free at all, your debt will be very, very high. The bill-collectors will find you no matter where you hide, and they will show no mercy.

> I am an Independent Radio Station. Please don't
>judge an entire organization or even an individual based on a few
>un-informed posts.

And I won't judge any publication based upon the ignorance of a handful of really bad journalists, although the editor should have better control over his flunkies. But I'll tell you now that I can respect Kevin because he is enough of a man to stand up and be counted, not like others that must hide behind a webtv alias.

> Do the research yourselves people. Come to your own
>conclusions.
>=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0
>
>"If you disagree with any of that Sparky, Leland, and Dogie, y'all are
>people that need told what to do all your lives and are in the wrong

Fasle cause once again -- you still haven't learned a single thing about logic. Not a good subject to be ignorant about, especially for a journalist.

As I stated in your personal reply, you are more than likely a fine
radio operator. No attacks from this origin. I believe eveyone has the
right to read whatever they wish and operate however they wish as long
as they bother noone else.
Happy DXing and hope
to hear you on the "off"
frequencies.

3s

==========

Hey twist, I getting really tired of digging up your old posts that
prove you are a liar. You don't even make it a challenge anymore. Just
admit it, and then try to find some new and more creative ways to cry
for attention.

OK, so if you never said you advocated freebanding, you should have no problem saying the following: "I, Twistedhed, do not advocate freebanding". Go ahead. Say it.

>
>2. Do you feel you have a "right" to freeband? (Your article in Sporadic
>Waves and your many, many posts here in the NG say YES)
>
>"Show me one, just one post where I said I have a "right" to do so. Show
>me where in the article I said that. You can't. Again, you lie."
>

OK, so if you never said that, you should have no problem saying the following: "I, Twistedhed, do not feel I have the right to freeband". Go ahead. Say it.

> A)
>Why do you attempt to mask your addy all the time when you post?

Same reason you mask your name when you post and use only your "handle". Got a problem with people using "handles", Twistedhed?

>B) Do you still pretend you are me around your house since you can't do
>it here in the cb room anymore?

Nobody wants to be you, least of all US. And we don't live in a house, we live in a mobile command bunker orbiting the NG.

>C) Why do you feel the need to bring gay sex topics into a cb room
>discussion

If a CBer is a gay faggot, as you are, it is definitely ON TOPIC.

>and why do all cbers who don't follow part 95 to a "T"
>intimidate you?
>

They do not intimidate us, Twisty. You have got intimidation on the brain. But even you admit to being "twisted" so it's no wonder.

726. Re: Sent to YNN.COM

After the fact therefore because of the fact is poor logic. Back to the drawing board scrotum breath. What you truly need to be doing rather than false logic might to be discover why you think it is that you need to post to provoke rather than to contribute.

Source record: 84895

From: sparky@cet.com (Frank Gilliland)
On Thu, 7 Jun 2001 18:27:31 -0400 (EDT), twistedhed@webtv.net
(Twistedhed) wrote:
  You posted it Spark, but you evidently didn't read it. Pay close
attention to this part..

I read it. It was unimportant.

"If it was so unimportant, why did you post it? Why have you and Dogie
posted many of my articles? All you do is blow my horn."
"
Anybody with half a brain can see right through your fallacies.

"What fallacies? Nothing I wrote in that article is an untruth."

The fact that a magazine can raise your ire by containing stories and
modifications not endorsed by our Uncle Sam is absolutely fantastic.

First, the magazine doesn't 'raise my ire',

"Sure it does, which is why you post it so many times."

your terrible journalism

"That "terrible journalism" is good enough to make print in many
publications. My paychecks dictate the opposite of what you say."

does. Another point to mention is how you understate the issue that
Uncle Sam does "not endorse" freebanding
-- not only does 'he' not endorse it, but has declared it a Federal
crime.
And your conclusion is subjective and unsupported.

"Of course it is. I make many references to the fact it is MY personal
view. See, you didn't read it."

That is what makes America great. One may not agree with what one reads
or hears, but that does not mean the others view point should be
censored or condemned.
Censored, no. But condemnation is itself free speech,

"Condemnation of what? My opinion is not "condemnation. If you take it
as such, so be it."

so your statement disappears in a puff of hypocrisy.

  It is all about knowledge and I can not emphasize that point
strongly enough. When you begin slinging innuendo that is unfounded and
unproven about a group simply because of its vehicle of media, your own

credibility becomes instantly compromised.
Oh boy!

"Yea, that part fits you to a "T"."

You say "it is all about knowledge". But while you strive to emphsize
that phrase, you fail to explain it's meaning.

"The intended audience understands exactly what I mean. If you spent a
buck and subscribed, instead of reproducing ads you find for the 'zine,
you would be enlightened. It is aimed at the communication enthusiast.
Argu that all you want.""

And while I agree with your statement about "slinging innuendo that is
unfounded and unproven", despite the terrible grammatical construction,
you have yet to prove any of your own accusations.

"Accusations? My word, man! The astounding amount of accusations has
come from you and Dogie.."

Your short and selective memory has made you forget your accusations
that I am Leland, Doug, Glenn Sparks, etc. You, OTOH, are too obliging
in your previous posts, admitting to everything that I have ever accused
you of being or doing. Have you beat your dog today?

"Not yet. I'll kick her for you."

There are
volumes of publications that are of questionable content available.
Including "The Wizard of Oz" and "Alice Through the Looking Glass", both
of which contain many references to drug use. Your point is vague at
best.

"Only to individuals like yourself and when taken alone and out of
context. It wasn't meant to stand alone as you have isolated it."

Laws
abound that make many activities legal elsewhere , but illegal here.
They sure do. If you were in a foreign country your freebanding

"What is considered freebanding here may not be considered freebanding
in somewhere else."

activities might be legal. But so far nobody has posted the country
where this is true, not even you, and not even after you spout your
phrase, "it is all about knowledge".

"The article isn't about debating the merit of foreign law vs. domestic
law, so no examples were needed, used, or asked for by the editor."

Your own knowledge, or lack thereof, fails to support your argument.

"Just because you fail to follow, doesn't mean the criculation of
subscribers did."

Does that mean we should not be able to read and learn about these situations?

Your question is moot--

"No it isn't. It is folks like you that I refer to. Folks that start out condemning the topic of what is written soleley on the content alone, which is what you have done and freely admitted several times over, then switch at a feverish pace to another complaint besides the topic when they bury themseves with foolishness and closed mindedness..Besides that, you are the hypocrite. Posts were shown where you offered to build illegal amplifiers, end of that story.."

-- none of your posts or articles was written where the intended readers were students of multi-culturalism or international law.

"You are correct. They articles were intended for communication ethusiasts, the bulk of the readership. The posts are for cbers. I find it odd you expect students of multi-cultures or international law to frequent a cb forum. Or do you just type so you can go back and admire your own post? "

  Reading an article by a publication or an author does not automatically mean the content is advocated by such.
No it doesn't, but that statement doesn't apply to you because you do,

"You 3 or 4 love to think you know what everyone thinks, feels, wants, and needs. Fact is, it ain't so."

in fact, advocate freebanding. There are too many of your previous posts advocating freebanding

"Show me where I advocate it. You still haven't done that."

for you to deny this fact.

"Not only denied, but made a liar ut of you, again."

I don't hold anyone
to any set of standards when broadcasting.
I have never heard your 'broadcasts',

"Course not. You have junk for a setup."

but as you know the CB is not legal for broadcasting.

"Who said it was. Oh, I se, another of your infamous "inferences."

If you are refering to your micropower broadcasting station, then I haven't heard that, either.

"Course not. You have junk for a setup. There is another inference. Where did I say I had a microbroadcasting station? I said I advocate microbroadcasting, which is totally legal."

If you want to act like an
idiot, why the hell should I care? There is a channel selector and an

off switch.
I agree. That point is preached here constantly. And people also have the choice to -not- change the channel and speak their mind. I respect that. You can say anything you want about freebanding or broadcasting or dog-beating or any other illegal activity,

"Of course I can. The speech thing, remember?"

but if you do you need to expect that there will be someone that is going to give you an earful.

"Spark, that mag was only a small part of my endeavors. The only reason you even found it was because it was about cb, hence the "Twistedhed" moniker that showed when you were offering a reward for info about me. I still get a snicker over that.I get emails concerning my stuff all the time, and guess what? It's all good. You wouldn't speak to a cb crowd with a Shakespearean approach, much as you wouldn't approach the podium of an investment seminar utilizing poor vernacular and anglo-saxon terms. But your opinion, once again, is duly noted. I hope this brief education assisted you in a few of your comprehension deficiencies."

And if you can't handle that, then you should either change the channel yourself, or drop the channel-changing argument.
  I also espouse the virtues of microbroadcasting. Should that be censored?
Censorship is not the issue. It is venue.

"One that you would like to write the TOS for and are unable. You want to censor the group. Admit it. You say you agree about changing the channel, but here you are contradicting yourself and using the premise of venue as a cover."

For an extreme example, nobody will censor your opinions in support of satanism, but if you start spewing them at the Vatican, it's a good bet that you will be carted away.

"We ain't in Rome."

And you can cry "censorship" all you want, because you are not being censored, you just picked the wrong venue. Micropower broadcast stations are not censored, and neither is their content. It is the illegal use of the spectrum that gets these stations shut down.

"Agreed."

That is not censorship,

"Agreed again. But they are not all illegal."

and to make that association is nothing short of a deliberate attempt to confuse the issue using the logical fallacy of 'false cause'.

"Man, you reach far and wide, do you not Frank?"

I should also mention that free speech has nothing to do with making unfounded allegations.

"Brother. That is so hypocritical of you, after you accusing so many in here of being criminals, sex perverts, etc."

You, shark-bait, and more recently, St. Hypocrite, all have this uncanny ability to say whatever you feel like saying, regardless of the truth.

"You can't handle the truth. It sends you into alias posting territory and fits of rage."

And you do so behind what you think is an impenetrable curtain of 1's and 0's. Your arrogance has led you to believe that if you can't understand how something works, then nobody else can either. This is -your weakness- and -my strength-, so please continue to place your ego above your common sense. And continue to think that what you are practicing is 'free-speech', because when you find out that it isn't free at all, your debt will be very, very high.

"Oh brother. Tell you what. If anyone, anyone at all has legal recourse in here for what might amount to libel, I am in the front of the line and Dogie would be in debtors prison. He has hit me with so much since I first pointed out his hypocritical and erroneous statements pertaining not only to cb and freebanding and running power, but life in general. Landshark alone could break your bank. Please, Frank. Go take your Prozac."

The bill-collectors will find you no matter where you hide, and they will show no mercy.

"I'm this anarchist, remember? You said it so it msut be so. Anarchists don't pay taxes, right? You think an anarchist will pay a bill if he don't pay taxes? Sucks for you, eh, Frank?"

I am an Independent Radio Station. Please don't judge an entire organization or even an individual based on a few un-informed posts. And I won't judge any publication based upon the ignorance of a handful of really bad journalists,

"You already did. Prozac affect the memory? I am not a journalist, but thanks for the confidence vote."

although the editor should

"There you go telling what someone else should do again. Nose problem."

have better control over his flunkies.

"Many flunkies get rave reviews. Does a flunky imply an employee? You are wrong again."

But I'll tell you now that I can respect Kevin

"Who the hell is Kevin?"

because he is enough of a man to stand up and be counted, not like others that must hide behind a webtv alias.

"Like you, right Frank? Well, I think you hide. I don't believe you are Frank. Post an address like I did so we can verify you are who you say you are...maybe a phone number, jpeg with your picture ID... Scratch that actually, I don;t care who you are.. Only you and Dogie are obsessed with who I am. It is you two who are obsessed with peoples identities. Get a life Frank, insteadd of grabbing hold of mine when I allow you."

Do the research yourselves people. Come to your own conclusions.
=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0=A0
"If you disagree with any of that Sparky, Leland, and Dogie, y'all are people that need told what to do all your lives and are in the wrong country."
Fasle cause once again -- you still haven't learned a single thing about logic. Not a good subject to be ignorant about, especially for a journalist.

"I'm not a journalist. Never claimed to be. Have a good weekend, Spark."

What hearsay I told you I know Jerry personally he went by the numbers #1470 Delaware, ran 8 pill amps etc, in the house off big power supply. Do you want to know the brand and type of radio they took from him. I guess that's hearsay.

I can't recall anyone in recent months reporting good news with regard to any mail order radio dealer. My suggestion is to buy your equipment locally from a dealer whom you can trust, and when it breaks you'll have a face to talk to. IOW, support your local dealer, and stay away from the fly by night mail box dealers with no name and no address.

Todd wrote:

Because I didn't snip the irrelavent parts of the post. Looking back,
I can see that I probably should have done so, since you use them to
divert attention away from the issue under discussion -- your advocacy
of freebanding. You could have used your head and pointed out that all
your quotes I posted were irrelavent because the question was asking
about you denying the practice of freebanding, which was not the
original topic of advocating the same. Instead, you chose to try and
avoid the issue altogether.

> Why have you and Dogie
>posted many of my articles? All you do is blow my horn."

>"What fallacies? Nothing I wrote in that article is an untruth."

Argument number 1:

P: All frogs are yellow.
P: All dogs are frogs.
C: All dogs are yellow.

That is a valid argument. It has nothing to do with truth, yet it is
still valid because if the premises are true, then it is absolutely
impossible for the conclusion to be false. Argument number 2:

P: Some dogs whine.
P: No CB radios are on Mars.
C: No dogs are on Mars.

While the premises may be true, and the conclusion is also true, the
argument is invalid. You should REALLY learn what you are talking
about before opening up that stomach-vent.

The rest of your reply shows you running around in circles, making cheap shots, and hanging on my words to the point of interrupting written sentences, so I'll just move on to something I missed before...,

> I also espouse the virtues of microbroadcasting. Should that
>be censored?

Keyword: also.

>"I'm not a journalist. Never claimed to be. Have a good weekend, Spark."

Do you think you could be any more obvious tossing out your bait? I'm afraid I will have to ignore you again, at least until you can come up with a new angle.

I used to read this group daily though not a regular contributor. It's a shame how this group has become recalling when there seemed to be friendly disagreements mostly over technical issues but a willingness of even the most crusty old poster to help someone in need of information. This used to be a decent newsgroup, one that I recommended to others with a sense of community based on shared interest in Citizen Band Radio, now all you see are personal attacks, profanity and I can't remember the last time I saw a really in depth discussion about anything that could be deemed as on topic.

It just goes to show just same as Citizen Band Radio the popularity grew and access increased the genuineness of the discussion suffered. Same holds true for this newsgroup.

Myst
Former KOD-4190
Citizen Band Operator since 1968

Interesting observation of how the newsgroup is a microcosm of the
entire CB community.

Some of us do not agree that it was such a great newsgroup. It was
dominated by freebanders (RF pirates) who flamed, ridiculed, cursed
and threatened anyone that dared to speak out against RF piracy. The
same harassment occurs on the air. There are now a few legal CBer's
that can not be intimidated, but that doesn't stop the pirates from
trying anyway. The tactics that were used by those pirates to
intimidate the legitimate operators are now used against them.

The chaos will subside when the pirates realize that this newsgroup is
for CB radio. CB radio is legal. Freebanding, pirate radio and RF
amplifiers are not, and are therefore off-topic.

Greetings!

On 6 Jun 2001 16:54:08 GMT, while the modem was busy tying up IRQ's
with the Mouse, "AntiKeyClown Disposition" <disposition@evidence.com>
dissertated the following:

:+> >If people want to discuss the topics of radios, they are supposed to
:+> >be allowed to - without harassment or spamming. What may be illegal in
:+> >one region, does not mean it's illegal in other areas.
:+>
:+> OK. Hang on here Andy, While you are correct in one sense - yes, FM is
:+> allowed in Europe and not in the USA - you are misleading in another
:+> sense. The
:+> commonly trafficked export radios and amplifiers are not legal for use by
:+> unlicensed individuals (which is what rec.radio.cb is topically dedicated
:+> to) ANYWHERE on the planet.
:+>
:+> The endless discussions about what "box" can pump out more watts serves
:+> NO audience - except pirate radio operators.
:+>
:+> The for sale ads for amps and 25-32 Mhz radios serve NO buyer except
:+> pirates.

This is your interpretation, not mine. I don't consider others
"pirates" simply because they post here. Most of those that "hang out
here" in the NG have a common interest, radio.

What campaign are you trying to represent?

Someone a long time ago, pointed out to me that "radio" is not just
the USA's problem, it's every ones.

I hope you can understand that aspect.

Because of trade barriers, and different interpretations of
Laws throughout the world, many countries are in a state
of Anarchy when it comes to radio and spectrum use.

The ITU and FCC for instance, did you know that Mexico, as
well as a lot of Latin America countries, look at CB radio
as "pirates"? Because they are allowed to speak openly and
exert an influence to the general populace.

The political machines in these countries use that as a method
of control - like a socialist society. So therefore - "self
rule" is out, but "whomever has the loudest radio" has the
final say. I can see why you feel the way you do, but it's

mis-directed. Many countries have a stake in the USA. The
populace of this wonderful country have relatives and a
background of other countries and societies. We are the
Hienz-57 of Earth.

Some countries don't follow FCC or ITU regs, I've listed one
of those and guess what, they share a border with us.

HOWDY Neighbor!

It's not just here in the USA, it's all over the world and
you and I can't seem to agree on this simple point.

All you have done in alienate yourself to a group of serious users
that are into radio. That is the point I'm trying to make, you're
dealing with "SERIOUS" radio operators. They mean business, and some
are into such a business that you're against, but not all. I don't
consider myself as one of them.

If you feel that discussing amps is misleading, that is your
interpretation. I already know what a lot of these "amps" can do and I
personally don't care to use one.

That is what makes the character of a person. Those that
get taken in are the gullible.

In one of many instances, there have been times the people wanted me
to help or buy a product from them. I did the research, I posted
questions, and I got some pretty good answers.

We, as John Q Public, have an influence. We've taught others
not to be taken in by hype or tripe.

A lot of changes have been made to how the internet
interprets a customer. "Gullible" that buy uninformed
are the culpable. Changes have been made, and I'd like
to feel that this NG as well as others, have exerted an
influence to a smarter operator.

If someone is going to buy something - are you there to
stop them? When I mean "something" - whether a pack of
cigarettes or a bag of shredded cheese.

Do you judge them by what they purchase? If so, you're
not god here. No one is.

:+> >If it's an illegal topic, either avoid it or take up flaming via
:+> >Email.
:+> >
:+>
:+> No. I submit to you this alternate concept. IF YOU NEED TO BE ILLEGAL AND
:+> TRADE ILLEGAL GOODS, SERVICES, ADVICE, CRIMINAL FELLOWSHIP, ETC. then do
:+> it by email. Hows that?

I'm not involved with this "trade". I don't sell, or market, any
equipment, if anything I spend time trying to help people.

Radio can be a simple recreation, or an investment.

To me, it's an investment. For many reasons.

Once again you pass judgement on people that will spend time, money
and effort make something of themselves. If this "conduct" is
considered illegal in your eyes, then that is your opinion. It doesn't
change mine - thank you.

If you consider stopping this "illegal operation", the crusade will
fail. There is simply too many people and too many different modes and
methods that this NG covers that Amateur discussions will support.

Tubes for instance, there are constantly talking about
"boat anchors" and parasitics. How to adapt to the new
Tubeless society, how to get more for less.

Bi-polars, FET's, MOS-FET - all are being discussed in the
Amateur groups.

That knowledge is far more dangerous than "try this with that", that
the NG shares amongst that type of group you are so against.

And NO, Amateurs and Radio Enthusiasts alike, will post here. We can
also go over to the Amateur side and discuss the finer points of radio
there too. Many out here do. Didn't you realize that by now?

We aren't "put" here, instead, we "chose" to be here.

Many are still here because they tolerate the bandwidth. Some left
because they either, got bored, or found a new hobby.

When you pass judgement, did you ever consider the consequences of
your actions? See above.

:+> >If it's something up your alley, then feel free to discuss this -
:+> >openly. If you get flames, and we all do, it should stay on the topic
:+> >and not bring in the relatives or bodily functions.
:+> >
:+> >The bandwidth is for the CB radio realm, which does include *any* type
:+> >of free and open discussion about CB. Keyword *UNMODERATED*.
:+>
:+> OK, then you agree it is open to all. That includes the opinions of those
:+> who disagree with the illegal majority. Live with them. The flames and
:+> flooding too. Because "it's an pen forum".

Not by my book, and a lot of others. You stay on topic, or be ignored
or TOS'd.

I noticed how you "circumvented" your own illegal topic of
TOS issues. You claim "open [pen? sp?] forum". It remains
open until you go off topic.

Flooding is a TOS issue - so you know.

Off topic means just that. Start a new topic about radio or
keep your personal vendettas to Email, or drop it.

If you wish to discuss the illegal side of radio, that is your
business. Same applies to you if all you want to do is talk
about legal issues.

When I came out here, I was new and in the beginning of discovering
"radio", I was a lot like you. But I've learned to get along with this
group and although I don't appreciate some of the commentary, we all
tolerated each other.

I learned to quit posting "moral issues" and learn more about
the people that post. This is why you're campaign will fail.

The more you attempt to influence your morals on anyone, you
are passing judgement that they are not equal.

That simply violates a granted right, to be treated as an equal and
respected even though you are not "the same as everyone else". That in
itself is outline in a lot of TOSA's.

When you go beyond the "intent" and into dictate, you lose
your audience.

:+> >What I don't want to read is stuff that even I would be embarrassed to
:+> >post.
:+> >
:+> >If you wish, or anyone for that matter, wish to discuss legal aspects,
:+> >and have it moderated for legal issues, then feel free to petition
:+> >USENET for such a NG.
:+>
:+> No....if you wish to have ILLEGAL RADIO as a focus, try alt.radio.pirate.

Not everyone here discusses Illegal Radio - as you put it. We discuss
radio. If it's illegal to you, that is your interpretation.

:+> >"Praise openly, Flambe Privately"
:+> >
:+>
:+> We appreciate your peacemaking intentions Andy, but you clearly want the
:+> "solution" to favor one camp and penalize the other.

I did not say that. You did.

I'M for the world effort to recognize all aspects of radio, and CB is
a major part of the communication spectra when it comes to people.
It's not just about 27MHz, is the type of people, like you and me, and
what they make of it, is what "CB-ing" is about.

If you wish to waste time on pointing out "Illegal" aspects, you are
sorely missing the point of why this NG is here.
Regards!

:+> Andy <+:

No not really. This ng is only a fraction of 1% of the top CB crowd in
the US and all over the world.

> Some of us do not agree that it was such a great newsgroup. It was
> dominated by freebanders (RF pirates) who flamed, ridiculed, cursed
> and threatened anyone that dared to speak out against RF piracy. The

> intimidate the legitimate operators are now used against them.

This ng is great, I have been in contact with many many fellow CB'ers
and hams who share a common interest, of the radio hobby. I have learned
a bunch of technical things and meet some great people.

The ng was never dominated by those who cursed or threatened anyone who
spoke out against RF Piracy. This is your biased opinion, and isn't

true. Yes the goof balls got flamed for being snotty and unfriendly, and if you interput that as cursed and threatened then your off base. And your opinion is a form of propaganda, and entertainment for your self.

There where never any Tactics to intimidate the legitimate operators. Most all wanted to have a few technical questions answered, to get their CB station on the air. There was never a push or effort to run new guys off the ng. This again is pure bull shit. And you know it.

The thing that got you guys upset is when they asked for help with a ham radio, VFO, or amp. But this certainly stood the hair up on your necks, and a good deal I might add. You guys have totally missed that the vast Lions majority of CB radio enthusiast that buy Ham Radios, and amps sooner or later end up getting a Ham license. And buy having a good technical CB ng they have had their pump primed to get into Ham Radio. Nothing wrong with this.

> The chaos will subside when the pirates realize that this newsgroup is
> for CB radio. CB radio is legal. Freebanding, pirate radio and RF
> amplifiers are not, and are therefore off-topic.

The chaos will never subside. Either on the ng or the air ways of the CB or Ham radio, get real.

CB radio is great, it has served the public very well, for many years, and will continue to do so. CB radio has gone through many changes in all the years its been on line, and will continues to change. But what a great amount of people have started out as a CB radio enthusiast, and then joined the ranks of the Ham radio world is great in itself. Thinking that your gonna stop the freebanding, pirate, amps, and so on, makes about as much sense as waving a Red Lantern at a run away train. Isn't it better to light one candle that curse the darkness?

Do you really think your making any one change their ways? It would be better to help out, and get people interested in Ham Radio than turn them all off as your doing. I hope your personal entertainment is worth it!

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

One is supposed to wait quietly for the offending party to start talking, then without keying up, locate said party and only key up when one is out front!

Cell phones are great for coordinating efforts.

(Been there, done that.)

wrote:

Now I'm really confused, Andy. Your posts are very informative and
even-handed. But your post has left me with a few questions:

>This is your interpretation, not mine. I don't consider others
>"pirates" simply because they post here. Most of those that "hang out
>here" in the NG have a common interest, radio.

There are different newsgroups for different radios. This one is for
CB radio, not ham, pirate, commercial, cel-phones, baby monitors, etc.
If you are a ham in this ng, you leave your ticket at the door. So why
not pirates? Isn't that a double standard?

>All you have done in alienate yourself to a group of serious users
>that are into radio. That is the point I'm trying to make, you're
>dealing with "SERIOUS" radio operators. They mean business, and some
>are into such a business that you're against, but not all. I don't
>consider myself as one of them.

Are you saying that others should watch what they say because there
are some that are making a living through the sale of illegal radio
equipment? Or should posters be cautious because some operators have
become obsessed with freebanding? Is that what you mean by "SERIOUS"
radio operators? Isn't it just as possible that legal CBer's can also
be "serious" radio operators? Should a "serious" legal operator
withhold his comments because it might offend a "serious" freebander?
This is a CB newsgroup, not a freebander newsgroup. Who has more
justification for voicing their opinions here? We live in a civilized
society, and we have to live under laws. Are these laws intended to
protect the law-abiding citizen or are they to facilitate illegal
activities? Do the laws favor only those that are "serious" about
their hobby or business regardless of it's legality?

>Not everyone here discusses Illegal Radio - as you put it. We discuss
>radio. If it's illegal to you, that is your interpretation.

What does "illegal to you" mean? Does it mean that laws are only
broken if you think they are broken? Just because someone may disagree
with a law, does that make it any less legal?

I'm not flaming here, Andy. These are all legitimate questions.

Todd,

Give John Mahoney at Panther Electronics a call. He's a straight
shooter with excellent knowledge/service and PHENOMENAL
support...particularly AFTER the sale. I've personally dealt with him
on numerous occasions and can vouch for his integrity 100%. His
website and e-mail address appear below. I'd tell you to say that Bert
sent you, but it wouldn't make a difference. You'll get the same
top-notch service whether you're referred from a current customer or
not. Good luck to you.

http://www.panther-electronics.com/

Great antenna's! Buy it! You'll like it! Easy to tune, install, etc. They work even better with 5' Firestick II as the top section.

789. COPPER CUSTOMER SERVICE SUCKS!!!

I bought a 2950 from Copper on 4/9/01. I got it a week later damaged in freight. They don't respond to emails & when I call I get a phony apology and a story about taking care of it right away. UPS has returned the radio & settled my claim.

!!!!!!!!!!!!!!!!COPPERS CUSTOMER SERVICE SUCKS!!!!!!!!!!!!!!

They did a crappy job shipping the thing & now I STILL DON'T HAVE MY RADIO! Has anyone else had this problem with copper? Is this some kind of insurance fraud? A scam to collect for damaged radios? OR is copper getting too big to give a rats ass about there customers? I've bought from other dealers and have never been treated like this.

Funny is it not Twisted that nobody else shares your views about what is going on here as far as me being the author of various posts under different names? You were told last time how wrong you were by various people, and I didn't even ask for the help, and here you are at it again expecting a different result, which is not going to happen. You want to continue making a total clown out of yourself, feel free to do so. The group needs a bit of entertainment at your expense. The more you screw up, the more laughs people get out of your performance. Remember Twisted to make your screw ups really BIG, just like last time.

Hello CB User: Yes the little Mickey Mouse window rollup antennas lack any real range capabilities.

The place where you bought the Man mount usually should be able to suggest a good antenna. I have had cheap mag mounts with like a 6 foot whip antenna and no problems.

The thing you half to watch for is getting the SWR down as close as possible to 1 to 1. The SWR Standing Wave Ratio, is the ratio of energy going out from the transmitter, compared to the energy be reflected by the antenna from a mismatch between the coax and antenna.

Some SWR is allowable, no reason to go nuts here getting the SWR down to 1 to 1, but it is nice to have.

The problem you may run into is that the 5 or 6 foot whip antenna will need a matching coil to get the SWR down as I have mentioned.

Its better to buy the hole antenna from one guy than parts and pieces, unless you are experienced at all this stuff.

Let us know how you make out.

Jay, just a quick question. What is the biggest, best, resonant antenna you ever had that did NOT work? I had one years ago - I was really anxious to try it out. Huge ground system. My rig could match anything (so I thought). I had loaded up ball point pen springs cherry red with the rig. I had literally loaded up bedsprings as a joke. Well, I hooked the thing up. It was a half-wave vertical. Unfortunately, the rig would not match up the high impedance at that frequency. NUTZ !! 256 foot vertical with extensive ground system and I could NOT load the thing on 1.8 MHz! (that was in 1966) I guess you can't depend upon the radio (even with a tuner) all the time to make up for strange impedances. Yep, 1.5 to 1 has to be better than to try and feed something over 1 k in impedance.... heh heh ... Well, it's a beautiful day here in Rochester, I think I'm gonna go kill a few brain cells on a tall cool 807 or something ...

73 from Rochester, NY
Jim

Jay in the Mojave <jay123a@qnet.com> wrote:
>Do you really think your making any one change their ways? It would be
>better to help out, and get people interested in Ham Radio than turn
>them all off as your doing.

That argument does not hold water. As Andy says, there is a new breed of CBer, e.g. the "serious" operator, the life-long freebander/keydowner. These are people like Tim Nebo, Twisty, etc. who plan NEVER to get a ham license. Others (like YOU) hold ham licenses yet still - for whatever antisocial reason - devote themselves to illegal operation on CB.

If this NG is, as you suggest, a training ground for new hams, then what kind of "education" can these prospects get here? They are exposed to people like Twistedhed and Tim Nebo and Pinhead and Punisha and Phoneman and Eitner who tell them that breaking the law is OK, stealing frequencies is justified, and "more watts" is what radio is all about.

If someone is interested in ham radio they will gravitate towards it anyway. They don't need an illegal CB community for support.

:+>
:+> >This is your interpretation, not mine. I don't consider others
:+> >"pirates" simply because they post here. Most of those that "hang out
:+> >here" in the NG have a common interest, radio.
:+>
:+> There are different newsgroups for different radios. This one is for
:+> CB radio, not ham, pirate, commercial, cel-phones, baby monitors, etc.
:+> If you are a ham in this ng, you leave your ticket at the door. So why
:+> not pirates? Isn't that a double standard?

The issue of "Pirate" is a bit overrated. If "freebanding" is what
labels people "pirates" then so be it. I simply do not see it that
way.

Amps? Well, I personally don't use them. Instead, I advocate the use
of a radio that will do the job, if it doesn't, get another one that
will. You simply save a lot of effort in getting taken in a typical
sale for something that was originally designed as a wheel chock or a
doorstop.

I consider, or look at, people that use CB to abuse other radio
operators as Inbreds. If you need further clarification - I'll explain
later. It's a personal attack issue and it doesn't need to be
explained all over again. It's a conduct versus opinion - and works
into a grey area that can be considered off-topic. Check my sig at the
end of my posts, you'll see what I mean. And I'm not ashamed to sign
my posts this way. I'm just like everyone else, I have pet-peeves.

I don't find too many of those IB's here in the NG, at least a person
that is new makes an effort to get up to speed before the flames
start.

Posters as of late aren't getting the right consideration when it
comes to replies. Not everyone is on the same page.

Answering questions one at a time...

:+> Are you saying that others should watch what they say because there
:+> are some that are making a living through the sale of illegal radio
:+> equipment?

Nope. Someone doesn't need to "watch what they say" - because that in itself is not an issue. It's when someone takes on a personal attack on a NG and make accusations that are biased - save it for Email and leave the rest of us alone. Remember that Amateur and non-Amateur are out here - we check our licenses at the door.

Yes, some people make a living at selling radios, export and otherwise. I used to think differently about the "export versus legal" CB issues. I've been "whapped" a few times when it was pointed out that some of the sellers deal with Amateur operators as well.

This NG was for the non-Amateur discussions, and some Amateurs feel that a "Galaxy radio" is a Crappy CB and frown on this NG. I don't necessarily think that - especially now, since RCI/Galaxy/SS lines have taken a more serious tone with the FCC due to RFI/EMI issues.

RFI and EMI topics were some of the most technical in any NG I've visited - you don't see too many out here in the past year because many radical changes have been made towards cleaner TX-ing by manufacturers. The FCC and the manufactures have been working together on this. It's good to see that this is happening.

Plus, it's more of a patent issue too. Redesign of a network or tank/filter circuit has been around for some time and manufacturers don't take kindly to public publishing of their secrets.

:+> Or should posters be cautious because some operators have
:+> become obsessed with freebanding?

No, because, again, Amateurs are also involved with "freebanding". Many Amateurs don't admit to the fact that they started out in CB - they get flamed for it. In the past, Amateurs would visit the NG simply asking for advice about topics that would turn any other Amateur-based NG upside down. This group was a buffer.

I look at this particular issue as, if you must - you know the rules. Pleading ignorance simply doesn't work.

:+> Is that what you mean by "SERIOUS" radio operators? Isn't it just as
:+> possible that legal CBer's can also be "serious" radio operators?
:+> Should a "serious" legal operator withhold his comments because it
:+> might offend a "serious" freebander?

When these "posers" go thru my mind, I consider a wide range of different issues; from Foreign country operators, to consideration that Skip noise forces an enthusiast to go elsewhere into quieter portions of the spectrum. Someone paid good money to satisfy a

curiosity.

A lot of the attacks as of late seem to be oriented towards people that seem not to care. It's the opposite, these people do care enough to a point that they don't want to bother others - they want to be able to communicate. That combined with other that don't care, when you have a big mess.

That brings up the "Serious" side of this.

Not everyone sees each other at the same level. In this NG, posters and the regulars have tried to keep an even keel. When someone is searching for information, I attempt to answer if I have an answer. I simply was not raised to pre-judge people. I got slapped if I did. And I do apologize to others if a post was interpreted in the wrong way. I'm not ashamed to admit that I'm wrong.

One of the major points of this NG is for answering questions. To pass judgment or opinion about a person, is not looked on favorably and places the poster in a position to be filtered. Sound Familiar?

If you passed judgement or opinions about radios or antennas, that is a technical view and you can get called out on the carpet and explain your reasoning. If you can't explain, you get flamed. You stay on the topic of CB's and its' issues - not drag in the relatives.

:+> This is a CB newsgroup, not a freebander newsgroup. Who has more
:+> justification for voicing their opinions here?

All of us. Anyone interested in radio. I don't see too many posters that push illegal issues and flame others because they use a Pro-538 or a Cobra 19+. If any flames, they usually are to the point of "You seriously need to upgrade" as the intent.

I used to bother professor to a point that he wouldn't answer my questions - but other people noticed. It would start threads that would prove or disprove claims. Even other amp-makers would join and it would turn into a foray of discussion with facts and fiction being hashed over. We never truly got personal unless provoked. Train, Ice, Dennis, Bill, Sean - and many others learned and discussed. We tried to avoid the personal issues and many left because of the tripe that eventually occurred. But during that time, we learned a lot from each other.

Only now, the NG has evolved into something of a shell of
it's former life.

I still chuckle at myself because of an issue I took up with Dennis about amplifier designs - open loop versus NFB. It was due to an amp he personally liked, and he didn't like me tearing it apart.

He called me a "Mud-Duck" and I still laugh at that. This is part of that RFI/EMI topic discussed earlier. We've learned to quit pushing buttons and just sit back and think first.

:+> We live in a civilized society, and we have to live under laws.
:+> Are these laws intended to protect the law-abiding citizen or are
:+> they to facilitate illegal activities?

No, once again, as above, pleading ignorance is not going to work.

Just as people are willing to risk their lives driving under the influence, or being careless about others - they suffer the consequences. Some with their lives.

It's mother natures way of "thining the herd".

When you join a Fraternity, or a Club, they also have rules. Some more stringent than common law. If you wish to stay, you have to follow those rules.

Same thing applies to freebanding and amps, if you want to play, be prepared to pay. I never cared for having that type of disposable income to waste on this aspect. I'm not that type of person either.

:+> Do the laws favor only those that are "serious" about
:+> their hobby or business regardless of it's legality?

When something is beyond it's capacity to hold anything more, issues like this "freebanding and amp" stuff come up. Freebanding due to lack of bandwidth thats open to use - it's an 11-year cycle we can thank the sun for. And Amp stuff because it's too easy to get your hands on one so you can attempt to "stomp" out others that don't share your view.

IMHO - the freebanding issue is moot compared to the amp issue. A call for help is quenched due to an amp from a careless operator. Linears are not my cup of tea due to such careless and casual use of them just to annoy others. Amps do more damage than a freebander using just a radio - put both together and you have a bad situation going to worse as time goes on.

If amps weren't so easy to get a hold of, there would be a different way of looking at this NG.

The amp issue is a performance issue with consequences.

You can do some serious damage to others if they aren't used properly. And that is a point I side with caution on.

We tend to forget that it's a cafeteria out there. Everyone has the right and privilege to use a radio as they see fit. Except rules are broken and there's no one around to enforce it. When a person sees and hears what is going on, they will take steps to survive.

When there is no one around to enforce issues like the above, you can't consider them "pirates" anymore. It's not even illegal, there's simply no way to enforce, or prosecute a person for their stupidity. So, when it Rome, do as the Romans do. Act accordingly. Or if you're

more of the Arabic types, ripping out their hearts and being blessed
by others for taking on such a task, leads you to think and believe
that it's more Anarchy than a CB world.

:+> What does "illegal to you" mean? Does it mean that laws are only
:+> broken if you think they are broken? Just because someone may disagree
:+> with a law, does that make it any less legal?

When dealing with international laws, I can't say much because I'm not
into politics. But I think that you and I agree to a lot of different
points. Only thing that I can see that may oppose this is the lack of
consideration for others. Thats where the laws get broken.

An open mind is needed to consider all aspects and I've described a
few above. I can't control others, but working together without
harassment, an amicable solution can be obtained if both sides care
enough to salvage what is left, and make concessions to keep such a
hobby alive.

:+> I'm not flaming here, Andy. These are all legitimate questions.

This post by far, has met all the criteria for a good discussion.

BTW, how are you? ;-)

Why is pointing out that (for example) stealing frequencies is illegal "a
waste of time"?

By your silence, you advocate and perpetuate the illegals views and attitudes.
By sitting meekly and quietly with your head in the sand and only commenting
on these issues if asked, you (in essence) give your approval to them, Andy.

Once posted to the group (on topic or not) it IS open for discussion. An initial post to the group should be on topic (a stretch for many in this group) and apply to CB radio or at the very least have something of interest to the group in general. This is why you will find so many posts dealing with both sides of radio (legal and illegal) in here. The overvalues(SP) self-righteous have taken to think they can just flood the group with spew about being illegal but this is still a part of the happenings in CB radio as a whole.

This is the same justification that LOOTERS use! (The store is being trashed,
no cops have shown up for hours, so why not "get some"?)

Andy, you seem like a nice guy, but your sense of personal responsibility
appears to have been warped by the criminal elements in this NG. This is
not meant as a slam, it's just that there's no other explanation for your
tolerance and support of predatory radio spectrum thugs.

Yes, Virginia, build it and they will come and by some magic sign up. Sure
they will.

And when they decide to go straight, what do they encounter? They encounter
some mental defective on a crusade to make him feel better about not even
attempting a Boy Scout level code test. My my.

I will make a bet that I have personally over the last 30 years elmered more
illegals who had seen the lite (and that in the 13 wpm days) than all of
your rants convinced to be nice.

Enjoy the power trip.

Sorry, thats not what 3 different sys Admins told me via phone and email,
just because someone posts off topic doesnt mean you follow them off topic.
2 wrongs don't make a right and if everyone did that then we would have a
group of off topic posts and not the one for which the Charter was written.
Ask all the fellows who got e mails regarding this. I love Cb radio.

>An

All posts initial or otherwise should be on topic, no exceptions. Of course
it is a CB radio Ng so they should pertain to cb radio and related items.
Not posting header info, and all the other BS.

Maybe im not seeing the whole picture, but if the damage occured during shipping, that makes UPS solely responsible for the damage and not Copper. If perhaps UPS can prove that Copper didnt provide proper packaging, then i would understand why you are venting towards them. It then would be their responsibility to provide satisfaction.
Granted, its been a couple years since ive ordered from them, Copper has always provided excelent service to me over the years.. And yes, i have had to place a claim with UPS when they trashed my Galaxy DX22B or whatever that Ranger in disguise was called. The real kick in the pants was calling Copper a few days after i received the smashed rig, and finding out they werent restocking that radio..oops

Dick, are we to assume from your comment that you are defending illegal CBers
who steal frequencies belonging to other services?

wrote:

>The issue of "Pirate" is a bit overrated. If "freebanding" is what
>labels people "pirates" then so be it. I simply do not see it that
>way.

It's a matter of definition. An 'RF pirate' is a person that doesn't
use the spectrum legally, in effect 'stealing' bandwidth. The term
'freebander' is misleading, since those frequencies are not free, they
are stolen.

>Amps? Well, I personally don't use them. Instead, I advocate the use
>of a radio that will do the job, if it doesn't, get another one that
>will. You simply save a lot of effort in getting taken in a typical
>sale for something that was originally designed as a wheel chock or a
>doorstop.

Amps are used to steal bandwidth by making the freqency unusable for
some that would otherwise be legal.

>I consider, or look at, people that use CB to abuse other radio
>operators as Inbreds. If you need further clarification - I'll explain
>later. It's a personal attack issue and it doesn't need to be

>my posts this way. I'm just like everyone else, I have pet-peeves.

It is not an accident if someone is injured as a result of the illegal
activities of another. At best it is called 'criminal negligence'.
Abuse of other operators may be by design or indifference, but never
by accident.

>I don't find too many of those IB's here in the NG, at least a person

I am sure you have noticed amps for sale in this newsgroup that were
not advertised in the amateur newsgroups, yet they use the excuse that
hams hang out here. If hams are supposed to check their tickets at the
door, then it should probably be the hams telling these dealers to
post their ads in the appropriate newsgroup. The reality is that the
ads are for pirates, ticket or not.

Sorry, I totally missed your point here. We have discussed the intent
of this newsgroup before, and I think we both agree that if it was
intended to encompass all non-amateur radio then it was poorly named.
That is not the fault of the CBer's, but it is not a fatal error. So
while the original intent may include GMRS, FRS, radio-astronomy, and
a host of other non-ham services, licensed or unlicensed, the name
remains rec.radio.cb.

>:+> Or should posters be cautious because some operators have

You are an anomaly. Many regulars used to promote and discuss piracy
at length while any dicussion of legal operation was flamed. Your
posts have indeed been fair to both sides, but that is not true of
many other regulars. The question from the occasional poster may have
been answered with goodwill, but if that poster was legal and wished
to post regularly, he would get no peace. Perhaps you didn't see it

because a lot of the flaming happened in emails, but some of it did occur in the group. And I am not just speaking from my own experience: others have emailed me in support of my legal position. Since most of them have been flamed into lurking, they did so confidentially.

I'm sorry that what you have seen was limited in scope, and may have even gone unnoticed. But there was major aggression towards the legal CBer. Now it is in the open for everyone to see. Now everyone gets a taste of the unpleasantness that was once reserved for the legitimate CBer.

>:+> This is a CB newsgroup, not a freebander newsgroup. Who has more

>seriously need to upgrade" as the intent.

Actually, I don't either. The best radio is the one that does what you want it to do, even if it is a TRC-9. But if someone asked about the best radio to use for talking to the Shuttle, I would probably direct him to a more appropriate newsgroup. When people look at the list of newsgroups and see rec.radio.cb, any reasonable person would think that this group is about CB radio, not ham radio, or cell phones, or police scanners, or RF piracy.

>income to waste on this aspect. I'm not that type of person either.

The purpose of laws is to make it fair and equal for all. Disparity
will result in benefits for some at the expense of others. The pirate
will pay if he gets caught, but those that have been deprived of their
legal rights because of his actions pay regardless of whether he gets
caught or not. The CB belongs to all citizens, not just those that
choose to use it. The pirate steals that opportunity from everyone.
Everyone pays -except- the pirate.

>that it's more Anarchy than a CB world.

I'm sorry, this is going to be a point of hard disagreement. As the
solar cycle drops, as it has been doing recently, the noise will not.
There will be more and bigger amps, and as the buffer bands get filled
up the pirates will look for more places to intrude upon. Things will
not get better because of the solar cycle, but they will get worse
because the FCC is very poorly managed (assuming there is any
leadership there at all).

Just because some have chosen to ignore the law doesn't give anyone
else the 'right' to do the same ad populum. All that does is make a
bad situation worse and puts you in the same monkey barrel with the
rest of them.

>:+> What does "illegal to you" mean? Does it mean that laws are only

>hobby alive.

Andy, you are a cool dude, but when a thief tries to steal my stuff
I'm not going to say, "You can have the silverware if you leave the
jewelry." Suggesting to someone that they should make such concessions
is called 'racketeering'.

>:+> I'm not flaming here, Andy. These are all legitimate questions.

I didn't know owning a radio was a prerequisite to conversing in the NG. If I remember correctly Landshark said he doesn't have a radio at this time .Did you ask him why he is here. Why are you here You don't post about anything CB related I have been keeping notes.

Not in the least. I am attacking bozos who have to find something to do to
avoid having to do something they don't like and bore everyone stiff in the
process.

There is a great scene early in Casablanca when Peter Lorre says, "I'll bet
you hate me, Reeck"
Rick (Bogart) replies, "If I thought about it I probably would." One of the
minor benefits of age and having seen it all before is the ability to

ignore: if it ain't fun and doesn't get me paid, laid, or fed it is really hard to stir emotion or opinion. If I thought about the issue at all, I would more than likely bellow a plague on both your houses. It just happens you are a far larger bore than the illegals, most of whose exploits are imaginary in any case.

Ok why are you here you skipped that question? Do you own a cb radio? Yes
keeping notes of all your off topic posts, that are non cb radio related.
Try another nic, what does that mean? Do I have to use the same one ..Nah My
isp laughed at that one in your complaint. So maybe Ill change nicks. I am
going check my swr on the beam this weekend. Ill be back.

Sounds like you thought about it a bit Dick since you bothered to reply a couple

of times to this thread. It also sounds like you are desperate to get back to discussions with Punisha and Pinhead about the 'imaginary' merits of a pair of 3-500z's on 27 mHz

No I will report you as you reported me, for off topic posting and for changing nics which they laughed at, they did say the post must contain something about cb radio, which none of yours do. Yes it is a free country so I figured I would return the favor. I am good like that. So hows your coax these days.

Message-ID: <4IhU6.133689$p33.2836936@news1.sttls1.wa.home.com>
Source record: 84927

I replied to you in another group where I saw your question, but I'll do it here also. I've wired both a Cobra CB, and a Kenwood ham radio, into my Goldwing with no problems. I did have to jump through a number of hoops to resolve alternator whine with the Kenwood while transmitting (a 50 watt transmitter loads down the bike's electrical system pretty heavily), but had absolutely no problems with the CB just hooking it up to the bike's 12 volt system.

The Cobra I got has the entire radio in the microphone, with a small box that has connections for the mic, antenna, and power. I put that box in the area Honda puts their CB, and ran the mic connector into the left storage pouch (right above where Honda's CB goes). Then I can plug the mic/radio into it when I want it, unplug it and store it away when I don't need it or want it secure. I used the external speaker connection and wired it into my headset. I've got the ham radio in my left ear and the CB in my right ear. The ham radio is wired to my helmet mic, and I have push to talk on the left hand grip.

I use the ham radio a lot more than the CB, but the CB is necessary to talk to other bikes. That's the only reason I bothered to put it on the bike.

Good luck, and happy riding.

Carl.

The Ten Commandments (In Ebonics)

I. I be God. Don't be Dissing me.
(I am the Lord thy God, thou shalt not have any other gods before me)

II. Don' be makin hood ornaments outta me or nothin in my crib.
(Thou shalt not have any graven images)

III. Don' be callin me for no reason -homey don' play that.
(Thou shalt not use the name of the Lord thy God in vain)

IV. Y'all betta be in church on Sundee.
(Remember to keep the Sabbath day holy)

V. Don' dis ya mama...an if ya know who ya daddy is, don' dis him
neither.
(Honor thy father and mother)

VI. Don' buss a cap in nonya brothas.
(Thou shalt not kill)

VII. Stick to ya own woman.
(Thou shalt not commit adultery)

VIII. Don' be boostin stuff.
(Thou shalt not steal)

IX. Don' be frontin like you all that an no snitchin on ya homies.
(Thou shalt not bear false witness against thy brother)

X. Don' be eyein' ya homie's crib, ride, woman, or nothin.
(Thou shalt not covet anything that belongs to thy brother)

First of all this is not as you say a new breed. Some or most of these heavy competitors have been doing this since the 1960's to my knowledge maybe before that!!!
You have certain guys who are mainly interested in keydowns and you have guys that just like to talk skip conditions. One thing for sure is it is not a NEW THING and I will be dead and gone and it will still be going on in some way!!!!
I agree with Jay. There are some who may be interested in ham but then there are some who never will want ham because they crave the competition. Perhaps it gets their blood flowing. Man has enjoyed the art of competition for a VERY LONG TIME and even if you succeeded in getting this thing somehow stopped, there would just be some new thing to keep men in competition.
There are still illegal drag races going on in my area as well. What are you gonna do??? NOTHING!! We are all just going to get OLDER!! ANTI KEYCLOWNS AS WELL!!!!!
Good Night!

Greetings!

Predatory spectrum thugs? Well, it's unique.

It would be far easier to make credibility in this NG if you kept your name the same for a while. Use anything you wish, but just keep it the same. Unless you have something to hide. Is this too much of a request? Don't push the issue of legal versus illegal when you can't make up your mind on what to call yourself.

I personally have nothing against either side, I'm guilty of walking a fine line between tolerance for both the light and the dark side. If that makes me a supporter in your eyes, then I will not follow you, or anyone elses' lead. I know too much to tell anyone they're right or wrong.

You missed the latter part of the paragraph...let me finish quoting it for you...

:+> ...[...]... Act accordingly. Or if you're
:+> more of the Arabic types, ripping out their hearts and being blessed
:+> by others for taking on such a task, leads you to think and believe
:+> that it's more Anarchy than a CB world.

The entire paragraph goes full circle on the way this NG is being treated by extremists.

It's self explanatory, I spoke my feelings and thoughts on the subject.

If I were to let this stuff eat me alive, I would have been gone long ago. I'm not gone yet, and quite frankly - you are passing judgement on anyone that speaks their own mind that may have some issues of tolerance on both legal and illegal that you feel is incorrect.

It's ok to feel that way, and to express it.

It's how it's expressed, is where the issue of what is the cause loses focus, and what is done to further provide emphasis [grand standing] can be TOS issues.

I've given you several hints and opportunities for anyone to see where I stand. Since you can't fit me into a "mold" that suits your definition of what type of a CB'er I am to you. Perhaps I can help you outline that further, I got the inspiration from a another "Techie" that called himself the 2X4. It helps change the playing field to a point that makes it far more clear...

There is a difference between a CB'er, and a DB 'er.

I invite you to figure that out.

In the meantime, I'll follow my own path, thank you. It's a little rocky, and lonely at times - but I manage to get a little farther each day towards my goals. People helped me get this far, and I would like to believe that I can return those unpaid favors back to benefit others.

Considering how much hard work it is to simply say the above and mean it, comes from direct experience.

Maybe a better way to state it - I'm simply not out here to "police people". I'm not qualified.

The stuff I could post about what to do with a CB radio, can make your life miserable.

However, what would it accomplish, or why should I post it?

The above is what goes thru my mind everyday I get out here and read thru the NG threads. I can be that "Darth Vader" or the "Jedi" in this NG. I feel no need to - I have my own character. I like where I stand. It's a nice view.

Did you ever contemplate what it's like being at the top? Everything else is "down" to you.

If I know something about a radio, I try to offer advice, sometimes the poster teaches me something I didn't realize before.

Perhaps you have me confused with someone else.

Going through this world with blinders on, you lose sight of the scenery around you. There are a lot of people that use CB for fun and recreation. There are also people out there that have an immaculate means to communicate using Citizens Band equipment. And all of them have something to hide.

There are people out here that fall somewhere in between those two categories.

And there is the fallout residue, a type of person that I have had to deal with in my childhood.

You follow this definition too closely.

It's shows when a meanness that is buried due to various reasons, surfaces. For no apparent reasons. But, it's a cumulative series of "triggers", both internal and external, that sets off this time bomb inside the person.

That kind of person is what you see later in life, become self-destructive. They can no longer find perfection in life no matter how hard they try to get the points across. They hide behind

themselves.

We are confused. That us, as individuals, [at least I am] whom have
decided to reside here need to know just what is going on.

Have we caused any emotional or physical harm to you? I'd like to
know, but mention CB every now and then to stay on topic.

You lash out at anyone that is trying to take you at face value. When
they explain their side the best they can, you refute their efforts.
Remember the intent versus the dictate, I mentioned this earlier
several posts ago. It's when you dictate, you lose your audience.

What you are seeing in this post, is a person that is simply saying,
"You don't have to be mean to make your point."

It will be your undoing.

On 8 Jun 2001 22:30:49 GMT, while the modem was busy tying up IRQ's
with the Mouse, "AntiKeyClown Discussion" <discussion@anti.com>

> It's unclear which side of the issue you're on, Dick and Randy. Care to
clarify?

Much like the Northern Ireland troubles, I am not on either side nor do I intend to be. I intend, like Calloway County Missouri did during the Civil war to secede from everything, shoot both armies on sight, and lead a calm and dignified existence.

Just because you state an issue, I am under no obligation whatever to take sides. Let me sit in my house by the side of the road and bellow BOOOOORING.

Greetings!

Hmm...where do I begin? Let's see...

Went to coffee break not too long ago, had a cup of java with them and
discussed how much we've learned from being who we are, and CB radios.

It's a wonderful life, isn't it? But there's more...

On 8 Jun 2001 20:48:23 GMT, while the modem was busy tying up IRQ's
with the Mouse, "AntiKeyClown White Paper" <paper@anti.com>
dissertated the following:

:+>
:+> Handy Andy <CodysPC@Iserve.Net> wrote:
:+> >If you wish to waste time on pointing out "Illegal" aspects, you are
:+> >sorely missing the point of why this NG is here.
:+> >Regards!
:+> >:+> Andy <+:
:+>
:+>
:+> Why is pointing out that (for example) stealing frequencies is illegal "a
:+> waste of time"?

First, you are stating that "stealing frequencies is illegal". I don't
remember where I ever argued against you on that point. If I have,
please point it out. I'd like to know.

If anything, I agree to your point because of my own
interpretation of the regulations.

It's pretty hard to *NOT* find someone on the regular 40, if you like
to listen and hide in those other "bands" - go ahead. I'm not stopping
you. It'll be a little dull though, just ask those neighbors I have up
here that got "chased off" channel 22 because of something familiar
that keeps cropping up in this NG.

:+> By your silence, you advocate and perpetuate the illegals views and
:+> attitudes. By sitting meekly and quietly with your head in the sand and
:+> only commenting on these issues if asked, you (in essence) give your
:+> approval to them, Andy.

I wondered what that big lump was, hard as a rock. Hey, now that
you're down here, care to talk about antennas? They work better when
they're *ABOVE* the soil level. You're part of the ground plane image,
but you need to work the element located above the ground in order to
be heard.

So, by your admission, if I keep my mouth shut, and stay away from flaming others for being stupid, I agree to their terms? I don't remember that in Part 95. Ok, I said it. Feel better? [There's a hidden twist to the above statement, you're invited to figure it out...]

Remember, what you do with YOUR radio, is YOUR choice, not mine...

Your serve...

Greetings!

Since I've been answering a lot of questions regarding legal versus illegal - to what end result is still unknown, I have to ask about my rights as an individual as to what I should do when I'm confronted by an illegal CB'er when they decide to blot out my conversation with useless drivel...

Am I allowed to go to that offender and rip/tear down their antenna?

Am I allowed to maim, mangle, fold, spindle, and otherwise mutilate the offender?

Am I allowed to use an amplifier to squelch out the offending station and continue the conversation?

The answers to the above [to ease the readers mind and soul] is nothing. I can't do anything about it.

I can't destroy the offender, or their station, or otherwise do any type of damage to the offender in any particular physical fashion.

The laws and regulations presented to the public, protect the offender from any type of harm because of their actions. We can't stop them from being idiots or acting stupid.

That is what makes me wonder if all this "Anti-Key-Klown" carp, is really just for trivia that will soon be seen on "How to Be A Millionaire"?

So, if anyone has any real facts as to why this group seems to be bent on illegal versus legal and where does someone stand regarding CB - please post them. I have no clue...

Should I even bother?

Have at it man, I'm washable! You will be awarded points on quality of mud slung and the style and class with which it is thrown -- sheer quantity is for guys with turned-around caps and pubic hair on their chins and lips.

Points will be deducted for self-importance, cutesy-poo, and labeling. Decision of the judge (me) is final. Prizes will be awarded when I am damned good and ready.

Let the games begin.

My name has been the same, I am not the one(s) posting under several
different aliases. The only thing I have changed was when I began
using my real name instead of my handle 'Sparky'.

>I personally have nothing against either side, I'm guilty of walking a

>wrong.

I'm not asking for your support. I had questions about your post. You
made your point clear, and so did I. I would expect you to take your
own course of action, if any, to pursue whatever you feel is right,
regardless of the actions taken by others for or against your own
opinions.

Disagreeing with an opinion is not passing judgment. Please do not attribute posts to me that are not from me. Once again, I don't need to hide behind a newsgroup anonymizer or an alias. If you haven't noticed, I'm outspoken enough without them.

> It's ok to feel that way, and to express it.

If I choose to fight fire with fire, just remember that the fire was there before I was. Also remember that not all those flames are mine.

>I've given you several hints and opportunities for anyone to see where

>point that makes it far more clear...

Whoa! Hold on there... I don't 'fit' people into any kind of 'mold'. Everybody is unique, but characteristics can be classified. It's not stereotyping to call someone blind if they can't see. If I see a flock of winged, feathered creatures flying over my house, am I fitting them into a mold by calling them birds? Of course not. When it comes to legal or illegal there isn't any gray area, you either are or you are not. And regardless of whether you are or not, the fact remains that I have never bothered you before. I responded to your post -not- because it appeared you might be defending illegal operation, which I believe you have done before, but because your arguments didn't make sense. So don't tell me about 'molds' when I don't fit into the one you have made for me.

Then that is my choice. My motivations cannot be explained with pop-psychology, so I will sum them up nice and simple:

Radio has been my hobby since I was small, and my livelyhood since I was old enough to work. I was given my first CB when I was seven. I started fixing radios and TV's in jr. high. I was a radio repairman in the USMC (2841), and eventually worked on everything from HF to microwaves to faxes to crypto to you name it. After that I worked a few years installing and repairing commercial radios. I went college and now I work on the serious stuff. I restore antique radios in my spare time, and a dabble around on the 160-190kHz band (one of the -real- freebands).

But lately there has been a rapidly growing problem with radio pirates. By far the worst of the lot are the ones that cluster around the CB. I could sit around with my thumb up my ass, or I can do something about it. My presence on the newsgroup is only one aspect of what I am doing to try and change things. But, right or wrong, at least I am doing something, which is more than most. Hell, freebanders do nothing to improve their circumstances except get a bigger amp every six months.

So if you don't like what I am doing on this newsgroup, fine. Because I really don't like it when people use poor excuses to justify their illegal activities, then try to psychoanalyze me when they don't have a clue.

Greetings!

Gee, spark, didn't mean to drag you back into this. No, it wasn't my intent to get you dragged back into it, you would have noticed that I would have placed the reply "quote" I see, somewhere in the message.

The "Anti-keyKlown" group is at it again!

The reply you're making to this former reply was my answer, you got it before the original posted by that AKG-reigstered poodle pup, and it was not directed at you...

I also noticed that it was edited out...

Heres' what I saw...and you'll see that it was directed to someone else. But, thanks for your input...

Very Well said Andy,
I guess that's what I have been trying to say,
but no where near as eloquent as you did it
I believe there is a quote from the bible,
please forgive me if I mess it up (not being
very religious) "Judge me not, for yee to be
judged" Something along those lines.

Well got to go, to nice of a day forming
to stay indoors.....

Landshark

I see you have been attending St. Hypocrite's Cathedral. You missed
one of the sermons. The verse says, depending upon your translation,
"Judge not, lest ye be judged...", which comes right after the verse,
"Woe be the sinner that speaks with a profane tongue, thou shalt use
colorful metaphors."

Hey guys how are your CB's doing, while your at it read this.. Food for thought.

* Discussion on any Usenet newsgroup is expected to be within the chartered subject of the group - there is no such thing as unlimited discussion here. This newsgroup is chartered for discussion of all aspects of CB radio. Though some topics are clearly outside these bounds, use some good judgement when talking about borderline cases. Please take seriously any complaints about the appropriateness of a subject.

Articles concerning illegal equipment (such as CB linear amplifiers and police
radar jammers) are not welcome. Not only will you be severely "flamed", you
are also opening yourself (and possibly the owners and administrators of your
news site) up to civil and criminal liability. Individuals who are involved in
the regular business of buying and selling for profit are requested not to
abuse this forum by using it as a "free advertisement" service for their
business, although they are welcome to participate as individuals. The
distinction here is that there is a cultural bias on Usenet, and an actual
prohibition on some networks that carry Usenet traffic, against using the net
for commercial purposes. Let your conscience be your guide.

The only "issue" as I see it here, is your posting methods. The porn, the spamming, et al. You have every right to voice your opinions here, as does everyone else. It should not matter to you what "side" of the "issue" I wish to reside on. I have read this NG for several years, long before many of the regulars were here, including Pain. That being said, I have never seen garbage like you post on any NG. There is no reason for it, and I think you *may* have started to see the light.....post your opinions, once. Post without pornography. There is a NG for that. You seem to have shown up in the last few months, and for some reason, you seem to think that your tactics are acceptable. They are not, and I'm tired of seeing your posts repeated 10-20 times. That is the only "issue" I have with you and your cronies. I will continue to forward any post that you repeat, or that contain porn to the appropriate service, and you know what? It has made a difference.

You appear to be contradicting yourself here... You frown upon illegal equipment, radios, amps, etc; basically ANYTHING to do with CB that isn't "by the rules". Yet you ask a question of "How's the DX today?" Now based upon FCC rules set up for CB, it is illegal to do any form of communicating with a station over 155.3 miles away. Now everyone knows that getting any form of DX from such a short distance away, is nearly impossible. In essence, you are asking people about an illegal subject; pretty much promoting it I guess you could say. Put your foot in your mouth often, do you?

Hey Andy, the Antikeyclown Group cannot alter space and time. Sorry if you got confused, but it's really not our fault.

As far as us being "mean", well, yes, the AntiKeyClowns are decidedly more radical than Sparky. We take the fight to the illegals and we don't shrink from using their own dirty tactics against them.

A cruise thru Google will show the familiar rec.radio.cb 'regulars' making unprovoked attacks and being quite "mean" to Mark Fuller, Aaron Voobner, Kari, Leland or ANY individual who stood up for themselves with a pro-legal view here in rec.radio.cb. Usually it's a one-sided battle, with the majority (illegals) driving off the individual (pro-legal) with a vigorous campaign of threats and profanity.

The illegals depend on being able to remain anonymous and take potshots from behind their masks while their opponents stand in the open.

The AntiKeyClowns changed all that. We fight on the same level as the illegals do in order to level the playing field. However you will notice a lot of crying and weeping from the illegals about this. After all, their whole existence is predictated on wielding an unfair advantage on the airwaves. They want the same on Usenet.

We don't care if you agree or disagree with us, Andy. If you have chosen to be neutral (like Switzerland) then that's your business. Guten Tag.

You seem to feel helpless and hopeless, like an inner city resident confronted by gang violence and crime. Actually you have some choices. You can ignore the idiots and move to another channel (unless the idiots decide to invade that channel too, which they may). You can turn the radio off (letting the idiots deny you the use of your radio). You can pretend it's not happening and try and get on as best you can. Or you can be an activist and find proactive ways to change things on an idividual level. No one says you have to be a radical if that is not your choice.

>please post them. I have no clue...

Simply put - we take the fight to the illegals and we don't shrink from using their own dirty tactics against them.

A cruise thru Google will show the familiar rec.radio.cb 'regulars' making unprovoked attacks and being quite "mean" to Mark Fuller, Aaron Voobner, Kari, Leland or ANY individual who stood up for themselves with a pro-legal view here in rec.radio.cb. Usually it's a one-sided battle, with the majority (illegals) driving off the individual (pro-legal) with a vigorous campaign of threats and profanity.

The illegals have historically depended on being able to remain anonymous and take potshots from behind their masks while their opponents stand in the open.

The AntiKeyClowns changed all that. We fight on the same level as the illegals do in order to even the playing field. However, you will notice a lot of crying and weeping from the illegals about this. After all, their whole existence is predicated on wielding an unfair advantage on the airwaves.

They want the same on Usenet.

Too bad they can't have it anymore.

Hello to all in the news groups,
I want to run open wire a mile up to the top of my hill.I am going to use two stacked 8 element beams.on a 50 foot tower.I have a clear path to the top of the hill.I also am going to put a static wand on the tower to reduce static buildup.I need to know where to puchase to baluns that will hold some power and match 50 ohms at the radio and antenna but between the two have a impedence for ladder line.Also will this work and will the losses be minimal thanks Genocide

Your loss running that much cable will be astounding. Should be interesting to hear about the end result. D'bags in the group will give you crap about the comment about having some power but screw them. I for one still believe in experimentation and this is just the sort of thing people who have not tried doing such a thing should jump in and have a good time with it!

Greetings!

Ah yes, the old "pro-active" approach.

Stop for a moment and realize what I have been doing in the NG.

A good way to put it is to lead by example.

I have not changed my reply-to.
When I can answer - it's for something I know.
I don't need to hide behind my keyboard.
When I'm wrong - I learn.

Right now, it has been a pretty clean dialog between you and I.

How long it will last? I don't know.

Greetings!

I've received a PDC-600 wattmeter/SWR/Mod meter from someone paying a
debt they owed me to fix their radio.

The "power meter" of the center one is either burnt out or has lost
it's jewel movement.

These meters are 100uA type and I was wondering where one should start
to find a replacement?

Thanks in advance!

Genocide

Ladder line is good stuff but it is hardly lossless over a mile. You do have to support the stuff, it doesn't work worth a damn lying on the ground. I would be more interested in how you plan to rotate the beams; 24V from the control box wouldn't lite a pisant's cigar at that distance.

I would expect attenuation of .15 db per 100 ft or something on the order of 6-8 db per mile which might get one watt in 6 delivered to the antenna. For this you get to support a mile of twin #12 wire. Keeps the birds warm on a chilly day though.

It looks to me as if a remote base would make the most sense and would be the cheapest (?) way to use the location. Now comes the hard part: the construction of this station might be done just about in time to wave goodbye to the current sunspot cycle. This would most certainly be best described as a vast project with a half-vast result.

Can't say I would recommend it.

Dick NBK

890. Dare: Different kind of antenna

Newsgroup: rec.radio.cb
Date: 2001-06-10 00:02:50 UTC
From: sparky@cet.com
Message-ID: <3b22b5ce.2044418@news.cet.com>
Source record: 84977

I just spent the day in the field comparing different types of antennas for an unrelated project, but while I was out there I tried a CB antenna based on an odd idea. It worked.

Basically it is a shorted piece of coax (I used hardline) fed from a 16:1 balun. I used an AMU to feed the balun just to protect my radio. The antenna coax started at 24" and I kept cutting it shorter to see how small I could get it. At 24" it worked just as well as a 1/4 wave whip (100 yards using a relative FSM). By the time it was shortened to 8" it started losing power quickly.

So I came back to the house and laid out a 50' piece of RG-8 across the yard, shorted it at the far end, hooked up the balun and then to my shortwave. It worked very well. I hooked it up to my o-scope and I could watch local AM broadcast stations on the 300 millivolt scale!

Since this is a non-resonant antenna, any reasonable length will work. It should also be very wideband, but I didn't test it for that. I would think that a better balun could also be used, or perhaps a proper impedance matching network.

Ideas? Comments? Suggestions?

Just because we oppose illegal CB doesn't mean we will suddenly unleash a
torrent of profanity upon you for no reason, Andy.

Of course, the AntiKeyClown Organization, like any dissident group, contains
a few extremists who advocate a scorched-earth policy, and once in a while
they may go a bit too far, but their targets are always hard core keyclowns.

It's pretty clear that Genocide plans to run "power" to this antenna, therefore his query concerns operation of either a "pirate" station or a licensed amateur station -- which is not "on topic" for rec.radio.cb. and is more appropriate to either alt.radio.pirate or rec.radio.amateur.antenna.

A better approach would be the occasional hike to the top of the hill carrying
a stock CB rig, a gel cell battery, and a sectionable 8 foot vertical antennae.
Of course, this would assume he intends to actually "communicate" rather
than blow a hole in the spectrum.

Dick, your answer is pretty good. Care to recalculate the loss on the ladder line with 1/4 inch of ice on it? Assuming that the line stays up in the air (however it is supported). Hmmm ... maybe a mile of hardline? Big hardline. Low loss (well, not over a mile - and ESPECIALLY not low loss on the wallet!). Then you could bury it. How much does a mile of trench cost anyways? It was a cute thought, although the troll-o-meter barely budged.

Consider that a 1/4 wavelength (include velocity factor) hunk of coax, shorted at one end, will present an open circuit to the signal source. As the length shortens (or, actually even if it were longer), its' impedance will drop. Current will flow. The current flowing along the outer braid (shield) will radiate. A quarter wave (in space) on 11 meters is around 9 feet. Once you figure in velocity factor, that will shrink to maybe (depending on the exact velocity factor) to 6 to 7 feet. This would be an 'open circuit' to the radio. You shorten it to maybe 3 feet and it may well start working as an antenna. You can make an 'end fed dipole' by using coax, stripping off everything from the center conductor for 1/4 wavelength and forming a few loops around 1/4 wavelength further back the line. The bare 1/4 wave section forms 1/2 of the dipole, and the loops form a choke, stopping RF further back the coax. Meanwhile, the coax remaining between the coils and where the bare wire now appears forms the other half of the dipole, due to current flowing in the outside conductor (braid). The question remains as to exactly what the impedance will be from this short 'stub'. That will depend upon the length; however, it might seem almost miraculous that a shielded wire could be an effective antenna (although it is the current flowing on the shield that performs the miracle).

I make it a policy not to assume a troll no matter how off the wall it seems. Things acquire legendary status in the vicinity of 27 MHz and it looked like good old ladder line had begun to be bronzed and worshipped as 'really low loss' which it is but a mile is stretching the point.

On the other hand, a guy who owns a hill a mile away could probably afford the run of wire.

I don't mind being taken in; it's recreation. So I play straight man.

I should have mentioned that neither the shield or the center
conductor were grounded, it was fed directly off the low-impedance
winding of the balun.

I was thinking more along the lines of trimming a dipole down to it's
low-impedance 'center' and feeding it from both ends, and then folding
the shortened dipole in half via coax. Only half the dipole would
radiate (the shield) while the other half (the center) is a return
path. But you're right, it may actually be resonant. If this is
similar to a 'trimmed, ends-fed dipole', then the feedpoint impedance
should be able to be calculated and measured, but it will be low.
That's probably why my GDO doesn't show resonance. My impedance bridge
doesn't measure that low, so I think I need to come up with something
new to test this idea.

Well, I have usually simply said 'live and let live'. There is little to be gained by flaming everyone. However, since you raised the question, allow me to pass along what happened back in the mid 70s. A dear friend of mine and her husband lived in the city and a fellow on the street behind her street and 1 house down (in other words, the property kitty-corner to hers in her back yard) had a real love for power. Although I know that telephones and (also in her case) electronic organs were the problem when receiving CB signals, the unbelievable intensity of the signals in her telephone and organ very strongly suggested to me that he was running a not inconsiderable amount of power. Oh, I heard him alright. 40 over 9 on both the telephone and the organ. My guess would be in the 250 to 750 watt catagory. Simple solution. Got a gasoline powered lawnmower? Yep. Got some bell wire? Nope. Ok, I've got some here (I have fixed her equipment before). We simply cut a piece several feet long. Now you tie the wire to the clothes line, strip a couple of inches off the end ... and I got out the lawnmower. Now you warm the lawnmower up to make it real easy to start. Shut it off. Connect the bare end of the bellwire to the sparkplug. Now, when he is on the air, start the lawnmower. No, you can't jam his signal, but he can't hear squat. Ya can't work 'em if ya can't hear 'em. Complain? To whom? Oh ... gee ... that wire must have just fell of the clothes line where I was drying it. Believe me, some women can play pretty stupid if they have to. Hey, if you have to fix something, you use the tools at hand (no, not guns!).

If line-of-sight is possible, maybe a microwave link? The local and
remote can use up/down converters. The remote site would only need the
amplifier to transmit. and a preamp w/band-pass filter to receive.

Isn't that nice... But, why was it you happened to choose to post something about an illegal subject... Either way, required or not, you chose to make it what it was... Something that you consider illegal, but felt it would make a good topic for your post anyway.

BTW.. The SWR is great... Doesn't even move the needle...

Assuming you are serious:

(1) See the ARRL Antenna Handbook for an easy-to-build matching device, made from coax.

(2) Open line works great in many circumstances. Not only do you improve the number of watts reaching the antenna, but receive is better, also. However, for lengths less than 150 feet, stay with a good grade of coax.

(3) Open wire line exposes the public to RF burns. If running the wire across the property of others, keep this in mind.

QRM

Greetings!

What Mark, Voobner, and N8 did, they did to themselves.

I guess the bandwidth they generated was so large, that many of those replying got tossed into the trash too.

Mark took it to the posters employer - I post on my own time. I never disagreed with Mark when it came to finding peace with the neighbors. In fact, that was a good learning curve. It was nice to know that someone did speak out openly on an issue that not many others considered. It had my attention.

Aaron got caught with a Double-standard approach. Advocated CB-rules, but sold Amateur equipment in a separate NG, that can be converted to CB use. I'm glad he sold it. I also had a concern for his daughter, Petunia. I did recommend that he give the girl a little slack and remove the Alcohols on the premises and spend a little more quality time with her.

N8? Well, I did try a post a few times but they must have been trashed due to his self-generated bandwidth exceeded the limits of a few ISP's. I personally don't mind a discussion about RFI/TVI issues. I also take a similar approach about using the type of equipment he was against. It's something I have a similar basis of thought upon. The requirements that such a device needs, can be extremely expensive for those whom their next paycheck is questionable. Furthermore, many of todays vehicles have the problem of economics, and wiring is one of those that adds to the suffering. Easier to get a radio to take care of the job versus the hassle of installing, testing, tuning and using such an aftermarket accessory.

On 10 Jun 2001 01:09:20 GMT, while the modem was busy tying up IRQ's with the Mouse, "AntiKeyClown Responder" <responder@anti.com> dissertated the following:

:+> However, we are still a bit puzzled by why you chose to speak out against
:+> the AntiKeyClowns unorthodox posting tactics, yet you remained quite
:+> silent when a few of the NG regulars threatened physical harm to Mark
:+> Fuller, Voobner, and N8?
:+>
:+> This is not an idictment, we are just very curious.

Idictment? Did you mean Indictment?

Well, let's stop and think about that word, "curious" - I was curious to know why "Spamming" and Flooding was considered acceptable? When it

came to actual intellectual content, I didn't find much.

You may want to inform members of the committee that by such
appearances and conduct - they work against the efforts of the
committee.

:+> >Right now, it has been a pretty clean dialog between you and I.
:+> >
:+> >How long it will last? I don't know.
:+> >
:+>
:+> Just because we oppose illegal CB doesn't mean we will suddenly unleash a
:+> torrent of profanity upon you for no reason, Andy.

I am glad to know that.

:+> Of course, the AntiKeyClown Organization, like any dissident group,
:+> contains a few extremists who advocate a scorched-earth policy, and once
:+> in a while they may go a bit too far, but their targets are always hard
:+> core keyclowns.

Now I must ask... Why do you consider yourselves Dissidents? It tends
to lower the tone of your approach.

I just thought the committee was a group of individuals that finally
had enough and decided to do something about it.

Your committee has a radical approach. As a regular poster out here,
some type of warning would have been far more effective in my Email.
Aaron has my address, I'm suprized why he didn't forward this to the
committee.

Regards!
:+> Andy <+:

Hello,
This is an off topic question, but I do hope you sell your radio.
My question is...
I am getting a new ISP and can't seem to find the news groups on the new server.
I noticed you have web TV.
Is there a link you could send me to get to the news groups or could you give me some direction on how to do so.
I really enjoy the news groups and the service provider is Goingplatinum.com.
If you can help me out with this it would be great.
Thank you...

942. How to get to news groups through new ISP.

HaHa woo You arent of the Anti Keyclown Faction. Nice try Though. Btw, Did you check your swr Today. Mine is 10-8
But since you ask, I have seen the light and changed my ways I don't own any amps or any other illegal eqipment you have to be really stupid to waste your money on those kinds of things for a Cb. Why so youi can step on someone elses qso,. You can keep operating the way you are myself I am not afraid of change you guys are. Cb radio Rulez!
They are for

So anything that generates large bandwidth is necessarily bad?

>Mark took it to the posters employer - I post on my own time.

As we recall, Mark took it to the posters employer only after the poster started publishing the names and addresses of other people named 'mark fuller' along with the suggestion they be harassed. (Sort of like Twistedhed did with Sparkey when he thought he was "Glenn Sparks")

>I never
>disagreed with Mark when it came to finding peace with the neighbors.

(with apologies to Paddy Chayevsky)

We don't have to tell you things are bad. Channels plugged by splatter a mile wide, profanity, obscenity, and criminals with big amps blowing holes in the spectrum for the fun of it. Punks are running wild on CB and there's nobody anywhere who seems to know what to do, and there's no end to it. We know the airwaves are unfit to use, we know they are crazy, so you don't use them anymore. You sit in the house, and slowly the world you are living in is getting smaller, and all you say is, 'Please, at least leave me alone on my computer. Let me at least talk about CB and I won't say anything.

'Just leave you alone.' Well, we're not gonna leave you alone. We want you to get mad! We don't want you to protest. We don't want you to riot - we don't want you to write the FCC because we wouldn't know what to tell you to write.

We don't know what to do about the criminals on CB. All we know is that first you've got to get mad. You've got to say, 'I'm a legal CBer, god-dammit! My existence has value!' So we want you to get up now. We want all of you to get up out of your chairs. We want you to get up right now and go to the window, open it, and stick your head out, and yell, 'I'm as mad as hell, and I'm not going to take this anymore!' We want you to get up right now, sit up, go to your windows, open them and stick your head out and yell - 'I'm as mad as hell and I'm not going to take this anymore!'

Things have got to change. But first, you've gotta get mad!...You've got to say, 'I'm as mad as hell, and I'm not going to take this anymore!' Then we'll figure out what to do about the criminals that have taken away your CB. But first get up out of your chairs, open the window, stick your head out, and yell, and say it: 'I'm as mad as hell, and I'm not going to take this anymore!'

You should be aware that some sites, e.g. <http://groups.google.com/>,
archive messages in some or many newsgroups, more or less permanently,
and provide some way to search them easily. Therefore, it's not a good
idea to post under your own name something that could embarrass you with
your spouse or employer or some other significant person.

Auctions on YAHOO
posted by wpeloqui on Wednesday June 06, @09:27AM
from the illegal-activity dept.

John Massa writes "I have recently been looking through the amateur radio auctions at YAHOO and I have discovered most of the equipment listed is CB stuff (I resist using radio equipment) and a large percentage of the stuff is illegal. I have e-mailed copies of the obviously illegal stuff the FCC and I have e-mailed YAHOO about the illegal activity on their auction.

We amateurs are working hard to keep our frequency spectrum free of illegal and unlicensed activity. It saddens me to see this stuff being sold and used by unscrupulous CB'ers because there are a lot of people out there that believe CB and HAM radio is on in the same.
I have several suggestions:
1st let the FCC know when we see illegal equipment being sold.
2nd notify the hosting auction of the illegal activity
3rd encourage legal CB radio usage there is a place for CB
4th and the most important educated the general population that HAM is not another form or name of CB

YAHOO Auctions (Score:1)

(User #490 Info)

"It's not my problem...;" "Let someone else take care of it..." "Tin badge radio cop..." If we don't step up to the plate, then, I ask you, who the hell will. The FCC, like most governmental agencies is overburdened, unfortunately by choice, as they try to be everything to everyone. The criminal justice community once enforced every law, arrested those with outstanding warrants and appropriately incarcerated them. Well, guys, that isn't the case anymore. Vigilanty antics aren't the answer, but consistently getting into the face of the bureaucrats is. Remember, a squeaky wheel always gets the grease. At some point, if we collectively become proactive rather than reactive something IS going to happen. Remaining passive and letting the governmental agencies be our collective voice isn't going to work...now that should be relatively obvious at this juncture.

At some point, many of us became aware that there was some "upstanding" citizen that had a KW amp in their home connected to a rig of some form and were unlicensed to operate it. Unfortunately, many of us have chosen not to directly confront or report that individual. One need only get on the HF bands at any

time of the day or night to see the results of our passive approach to this problem.

It isn't a local problem, it's a global one, and we, as the world wide amateur community, must become collectively proactive, and either put up or shut up about this creeping problem. Attacking those who voice concern, or have taken some form of proactive stand on the problem isn't a logical nor productive approach. An inappropriately modified piece of equipment that remains unsold is another piece of equipment that we don't have to compete for band space against. Illegal users who are reported are a red flag to others that express an intention to or are currently using this equipment. If every "good ol boy" or that minority of truckers who use this equipment got the word that it can and ultimately will become expensive, we're moving in an appropriate direction. This bantering and attacking those who are trying to become part of the solution vice the problem simply cannot be productive to a collective voice for amateur radio.

Very interesting post. But I just HAVE to know...the last time I checked, this is only a computer, and NOONE is keying-up on here! Shouldn't you folks actually be on the RADIO? I mean if computers are only in 40% of households (ya...I read that somewhere) you are NOT reaching 60% of the population. Or worse yet, NOONE on the radio! So...get off the computer, and get on the radio fellas! I'll be listening on 27.395 LSB for you comments. Gimme a shout.

Subject: "No ground base antenna....."
Newsgroups: rec.radio.cb
Date: 2001-03-06 16:32:23 PST

Ok, I did something stupid. I live in an apartment and decided to try
one of
the "no ground" base antennas. Ok, I bit and deserve to be beaten with
a
resonant wet noodle! Anyway, this piece of whatever causes feedline
radiation, high SWR, et al.............unless............I hold the
damn
thing in my hand by the aluminum base. Then it matches fine. This
seems to
suggest to me that it needs some sort of counterpoise system. I am
open to
any suggestions that might help, but keep in mind that I live in an
apartment when considering ideas. I do have a tuner, and have not
tried that
yet. That will be my next endeavor with this thing, although I don't
hold
out much hope for that working. I have tried decoupling the coax via
the
loop method below the feedpoint, with no success.

This thing is one of the 39" antennas that you see advertised by some
of the
sites on the web. Has anyone had any experience with these things, and
if
so, what did you do to make it work? Any suggestions?

Thanks,
Randy

Thanks rfcop.

This fella Randy is a REAL piece of work. A Tech ham who dedicates himself to illegal CB. Hey Randy, please mail your license back to the FCC and then turn yourself in to the nearest FBI office. The charges: "Being An Asshole".

==========
Here's Randy encouraging CBers to buy ham rigs...
==========

From: Randy (randy28@swbell.net)
Subject: Re: RCI-2990dx

In the price range that you quoted, a nice ham rig would be your best option. Furthermore, if..(sorry, but it will happen)......not if, but when you decide that chickenbanding gets old, you have the radio you need to work the ham bands.

==========
And here's Randy giving advice on how to get illegal gear past Ebay's censors...
==========

From: Randy Chapman (randy28@swbell.net)
Subject: Voobner
Date: 2001-01-14 08:29:34 PST

And about the E-Bay thing with him, just do not post that radios are modified, or that amps are capable of being used on 11 meters. We all know what equipment can be modded, and what name brand amps are actually designed to be used on 11. Without blatantly stating that they are for 11 meters, E-Bay will have a harder time of deleting the posts.

> by choice, as they try to be everything to everyone

So, by forwarding them all this shit, do you actually think that they will magically become NOT overburdened? No, this will in fact make it all the worse. Not only do they have to deal with there already overburdened shit, but then they have all this forwarded bull shit to add to the pile of work they already have... That's a great way to get nothing to happen! Keep piling it on them, so they REALLY have no time to enforce the rules... Makes life easier for the illegals.... Some people just don't think before they act... I don't see how giving them MORE work is lighten there workload any.... lol

Too funny! You guys are a blast! Off topic? Send all that you think are off topic. Hell, forge some if you wish! But the fact remains that I will still forward all the spam and porn you post. Did I hit a nerve? Hmmmm..........

Bet you poor puppies are searching the net looking for a picture, huh?

Laughing on my way out to dinner.........

the fact remains that I will post what I want, forward what I wish, and report the anti-faction for doing what I have stated I do not agree with. For some reason, and I remember reading the words "you can't do s--t", I seem to have struck a nerve with the anti's. If you guys want to do a search, there are more posts that I have made in the various amateur newsgroups. Look there and post them as well. Feel free. I'll still be here.

Take care.
Randy

What about other TOS rules? Like the use of profanity, and the
endorsement and promotion of illegal activities? Or is it just more
convenient for you to whine about rules you don't break yourself?

Obviously the original post was written by someone with to much free time, and a misguided judgement of what's important and what's not.

To the poster: Couldn't you be doing something more beneficial for yourself like treating your woman (if you have one, and if you're capable) to a good time? Or perhaps just whackin it (if it still works) ?

Maybe you could spend more time operating a radio instead of telling others how to operate? You could get a life and gain respect if you'd just try to fit in with the rest of society. A good psychiatrist can help you in this area. Respect toward you seems to be absent. How come?

Couldn't you also be doing something more beneficial for others? Like adding in a constructive way to the subject matter concerning CB? You seem to be negative. Everything that comes from you is meant to be destructive and inflammatory. Is this how you converse with your friends (if you have any) and neighbors?

Conclusion: Your attitude is easily explained. It is a classic "napoleon complex" You either are physically little, phallically puny, or a mental wuss. Therefore you overcompensate with your continual assault on this newsgroup. Well.....which shortcomings do you suffer from?

The interesting thing about Legal, Eagle, Beagle, and Briefcase is that without the code test they can't even take Element 3, basically rules and regs. This is a bozo lifer Tech doing everything he can to convince himself he is doing something useful while avoiding the Girl Scout-level code test.

Here's a site for you to check out:

http://www.intio.or.jp/jf10zl/

I don't think this guy spends much time lounging around on boats.
Myself, I prefer to spend my time doing things that are constructive.
I even set up my computer at my bench so I can read your drivel while
I work. And that way I can be proud of what I have accomplished, not
arrogant about the things I have bought. I have even planned my
vacation to be both relaxing and constructive. What are you doing for
the 4th, moped?

Every time I start thinking about getting an amateur license I start looking at the rec.radio.amateur newsgroups and I get better. Their bickering about code vs. no-code isn't any better than what happens here. And looking at some of the more recent threads about farts, puke, and stealing radios from widows, it doesn't look like it's improving any time soon. Then I listen to the old shortwave and I hear conversations -- even on HF -- that I could swear I heard on the CB the night before.

The only advantage is there are more places on the spectrum to be an asshole if you have a ticket, and even more if you do the code. If he doesn't want to take the code test, maybe you should count your blessings.

You might have a point. As I make part of my living talking, my hf gear does not at the moment have a mike connected so I don't feel particularly endangered.

There are parts of the ham bands where no sane human being ever goes, particularly the non-treaty portion of 75 meters and the upper part of 20. You should be aware that rec.radio.amateur. misc has become the dumping ground for some jammers that got Rileyed and find it safer to use the internet while .policy was set up specifically for the code wars so Wysiwig. The puke thing is more a case of not changing a cross-post than anything else. You should also be aware that both are quite recreational -- some of the guys at each other's throats are the best of friends.

If I had a General ticket, I would more than likely not operate on any band where Generals do not have full privleges with the possible exception of 15 meters. The DX on 15 has been phenomenal until the last solar storm.

I am neither defending nor recruiting for Amateur Radio. Give anyone a mike and an audience and you will get some flakes. Having enough spectrum to swing a cat, however, is one very real advantage.

Hello Mr. Iococa,
What would Frank know about apartments, he always
busy hiding behind bushes with a scanner, waiting to
jump out, and scare the geezers out of some old woman
walking her dog. (thinking she might be dealing drugs,
burglar, carjacker, rf pirate, whatever.....
Oh by the way Frank, I did like your post about
the antenna test, I did almost the same thing, but
used an antenna tuner between the radio and coax.
It worked quite well, was able to be heard about
5 plus miles away. Also Frank, respond away, but I
hate to tell you that I still have filters installed and only
see your post if someone quotes you.

My interest isn't so much the communication as it is the radio itself.
I enjoy experimenting on the lowfer band, 13.56, CB, etc, and
restoring those firebottle rigs. A general would certianly open up
more opportunities. I would also like to get involved in emergency
comm, but every time I listen during an emergency the hams seem to
clog up the bands with idle chatter -- I would be suprised if anyone
could actually hear a distress call when it's that busy.

But I will consider what you said the next time the gumption strikes.

As I noted in a reply to Sparky emergency communication requires either a group that has worked with each other for some period and/or a net control with the management skills of Attila the Hun. The only thing that stops the babbling is fear.
>
> But I will consider what you said the next time the gumption strikes.

When it comes, here's three websites:

http://www.arrl.org for the mechanics.
http://www.qrz.com for sample tests
http://ah0a.org for Morse Academy.

Well, the best idea I would have would be to click on this.. This should set you up, unless they use a non-standard method of accessing the groups....

news://news.goingplatinum.com

I'm not sure if that will work with other newsreaders, but I know that it will work with Outlook Express... Just click on it, and if that is the address this ISP uses, then it should ask you if you want to download the list of newsgroups.

Good luck!

Computer monitors are usually poorly shielded and there's not much you
can do to fix them. On the main box, most of the RF comes out of the
plastic faceplate. A good case will have lots of sheet metal behind
the plastic. If you don't have sheet metal, you might have that black
anti-stat sprayed on the back of the plastic, which is worthless for
preventing EMI.

So either get a good case and monitor, or turn your computer room into
an RF cage.

>Just an observation, by why do 2950 user seem to think that everyone
>else is "off frequency"??

Is this when you are using SSB? Here are some theories:

(1) 2950 users may not know how to use the clarifier knob properly.

(2) Every 2950 I have owned drifted with temperature. It is difficult to keep them on frequency.

(3) When "tweaking" the radio, someone may have misaligned the xmit/receive boards so they are not synchronized.

No RCI-2950 user should establish himself as the "standard" for the SSB net. The rig isn't that good. Sorry.

QRM <----who owns 3 2950's and a 2970.

1057. Taking a hiatus...

Newsgroup: rec.radio.cb
Date: 2001-06-11 13:39:50 UTC
From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <udi9itsffs0c17uetrtv7c79trtlgbqggt@4ax.com>
Source record: 85096

I've been considering a few options.

Each and everyone of them has a similar end result.

What you are reading is frustration at the lack of control people have over simple discussions. Not only is there badgering and constant taunting, a committee of self-proclaimed fighters for "a granted right to stay legal" [which is an oxymoron in itself] has formed.

They have decided to start picking fights over who is going to get the next batch of Girl Scout cookies.

Since faced with a dilemma of either backing down, or putting up a fight for people that have problems with their egos or their radios, and have no desire to be considerate of others that simply do not want to play with the same equipment. Besides, many of you would rather see me go away due to the drivel I seem to be producing as of late.

Instead I'm going to simply throw-up. Nothing productive is going on in this bashing that is going on.

On one side, we have spamming and flooding of personal and bodily functions along with the cursing and swearing of this "Legal Committee".

The other, "I'm the king of the CB-world" mentality that bigger is always better.

And I am to choose sides?

No offense folks, but the CB-kings have shown, repeatedly, they can handle themselves just fine and in a kinder way towards tolerance of a person such as myself and exist together to benefit all.

These Kings, are far better at controlling themselves and their ways better than a committee that seems bent on "Keying down" and destroying a NG.

For what purpose?

That is why I'm taking a hiatus. I'm tied of seeing friends bicker amongst each other and myself for posting questions that can't be answered by a group of individuals that seem to act above the laws I am bound by in my own TOS I clicked "Agree To".

As far as the topics themselves? Whether it's a schematic of a TS-667V or how to put in a Cobra 19+ - we have been there for it. And I am proud to say, That I've had fun!

Now it's at a point where the "Self-Proclaimed Anti-Key Committee" is
feeding on it's own kind.

This is a feeding frenzy folks, any smart fish, invertebrate, Bird,
Animal, Human - warm or cold blooded, needs to get the h*ll out of it!
So they can keep themselves in perspective and to maintain integrity,
let alone, sanity. It just looks bad...

To Train - share your knowledge man!
To IceCold - Keep those thoughts, and those jokes coming!
To CD - Glad to have you aboard!
To PowerHouse - Slap those that flame others because they know better!
To A.E. - I'll be trying to Shout out there for you!
To Richard - you better keep the troops entertained!
To Spark - good luck in your endeavors!
To Dave & Debby - Keep reminding us of what it could be like!
To Sean - you may not see this, but you're sorely missed!
To Bill - Keep up the good work, I may be contacting you!
To Dennis - If you're reading this, you're not forgotten!
...

And for Morph, Twist, all the rest - you know who you
are...remember...

You are a CB'er when...
No matter where you go,
What you do,
or who you do it with...
You can take a CB away from the kid,
But you never, ever, can take the CB out of the kid!

Unit 38, Handy Andy
:+> Andy <+:

Don't worry, I'll be back!
Keep the channel warm until I return.
My Box is open!

Regards!

"Profanity isn't addressed in everyone's TOS rules."

  and the endorsement and promotion of illegal activities?

"Talking about something is quite different than endorsing it, which is where your argument self destructs and you lose all merit. Something about your inablility to distiniguish."

  Or is it just more convenient for you to whine about rules you don't break yourself?

"Still pissed about getting caught, eh Frank? Wanna buy a cb that will get you out better?"

1061. Weekend CB radio report update

Newsgroup: rec.radio.cb
Date: 2001-06-11 14:20:09 UTC
From: twistedhed@webtv.net
Message-ID: <7737-3B24D399-132@storefull-126.iap.bryant.webtv.net>
Source record: 85151

Gee! Aren't you the Superslueth! So funny! Is this suppposed to
intimidate me?

"I dunno, either. He thinks that we care about identities or something.
Since he hides, he thinks everyone that talks on cb hides. Haven't you
noticed that pattern? If he cares about something, he automatically
thinks it is what others care about...hence the "reward" (I still get a
chuckle from that) he offered for personal info on regular posters, and
is why he is posting your personal stuff, (his worst fear, being found
out, or, just found) and the same for his rabid homo rants he posts here
(he projects his desires through insults to another) and basically
thinks someone besides him cares. 27.555 USB, you can hear the best of
the week compliations from the stuttering camp, and the retorts by the
World Wide Famous Adair Agitators (AA's) that are Q5 on Saturday
mornings. Remember, the frequency is upper side of 27.555, and there is
no law against scanning and listening, y'all! Turn on, tune it in, and
check it out and tell me if it ain't funniest thing you heard on the
airwaves in a long time. For you spectrum thugs, numbers are being
issued, but people better hurry. Last I was listening, they were already
up to 2AA0011, and that's no joke!!! StatiC FreE RaDio..straight outta
the RF spectrum and down 'yer throat..click...click...click..with my
'lil 'ol cb!!!

This is what your poorly attempted frameup did for you Spark...nada,
zip, zero, just what you are used to. ADAIR" <N8WWM@FREEHEAD.CUM> wrote:
FREE HEAD TO ANY KEYCLOWN WHO CAND STAND MY ROTTEN BREATH.
N8WWM AHAHAHAHAHAHAHAHAHHAHA
Jeez, twist, you're in prime form this morning. What'sa matter, fish
ain't biting?

"Congratulations, Sparky. You just joined Leland in frequency of
misattributing headers, although some would have expected more from you
than to reply to a post with such bad words and pornographic content,
but not me, 'cause I know what you're made of, which is why you fear me
so much and attack me for no reason. You feel inferior to me, and with
good reason....you simply are. It's ok though, I don't mind. You've
thrown your best at me and your ignorance is all you have left. I see
how Dogie has been behaving himself in comparison. Your game is over, we
won and you both lost. Catch you on the bowl (that is channel 6 on your
cb dial) or triple 5 (which would be 27.555 USB) on your modded, peaked
and tweaked, echo bouncing, roger beeping, RF emitting converted ten
meter radio getting up with a four hundred pill linear. You know, that
was almost as bad as someone else forgetting a certain sequence that
always deletes the remainder of his post before he is finished. Next
time, at least remove your time zone, Spark, from your attempted forge.
Not even a good try. Hey..did you fellas listen to triple nickel
Saturday morning? The radio conditions allowed for good copy of Roy
Mercer doing Dogie in his finest hour, sort of a Foster Brooks crossed
with Jeff Foxworthy with a no code call sign. They taped it for
rebroadcast for whenever they feel it may be necessary to replay (like
next Saturday?). Anyone else say hear the sheriff say they were working
on getting live feed from six meter? A tape was mentioned, but the
sheriff was quoted as saying, "Is it live, or is it Memorex, it's
1800TollFree and we are going to bring it to you LIVE from 6 meter."
Good conditions allowed for many, many DXers comments across the country
to be included, thanks to our crystal clear pirate in the desert network
of Arizona that owns the frequency. Now that the Alfa Tango's that still
frequent 555 seemed to have reached a semi-agreement, the network was
heard saying they new blood, and Dogie and his anti's gladly offer
themselves up. You sure you don't have a call, Frank? Would make things
so much more interesting. Ask the Kansas City octahedron radio station.
He's now famous. Anyways, interesting things are happening in the funny
channels. Strange occurrences in the desert. Keep those cb's trimmed and
burning....click...click...click!"

the Desk of Handy Andy <CodysPC@Iserve.Net> wrote: Greetings!
Since I've been answering a lot of questions regarding legal versus illegal - to what end result is still unknown, I have to ask about my rights as an individual as to what I should do when I'm confronted by an illegal CB'er when they decide to blot out my conversation with useless drivel...
Am I allowed to go to that offender and rip/tear down their antenna? Am I allowed to maim, mangle, fold, spindle, and otherwise mutilate the offender?
Am I allowed to use an amplifier to squelch out the offending station and continue the conversation?
The answers to the above [to ease the readers mind and soul] is nothing. I can't do anything about it.
I can't destroy the offender, or their station, or otherwise do any type of damage to the offender in any particular physical fashion. The laws and regulations presented to the public, protect the offender from any type of harm because of their actions. We can't stop them from being idiots or acting stupid.

Chickiehawk spewed forth, while jumping up and down and saying, "Look at me, Andy, Look at me and give me self worth", opined the following hilarious self embarrassment: You seem to feel helpless and hopeless, like an inner city resident confronted by gang violence and crime. Actually you have some choices. You can ignore the idiots and move to another channel (unless the idiots decide to invade that channel too, which they may). You can turn the radio off (letting the idiots deny you the use of your radio). You can pretend it's not happening and try and get on as best you can. Or you can be an activist

"Oh, is that what you call yourself now, chickiehawk? A cb activist? On what channel do you reside? LMAO!"

and find proactive ways

"Name one proactive measure you have employed. There have been many ways for you to express your displeasure with certain elements of cbers, but proactive sure isn't one of them."

to change things on an idividual level.

"Part of that is essentially correct. The only thing you have managed to do is let the newbies see what a troubled and disturbed individual you are, on an individual level, of course. You accomplished nothing else. Oh, you did lose a few access servers."

No one says you have to be a radical if that is not your choice.
That is what makes me wonder if all this "Anti-Key-Klown" carp, is
really just for trivia that will soon be seen on "How to Be A
Millionaire"?
So, if anyone has any real facts as to why this group seems to be bent
on illegal versus legal and where does someone stand regarding CB -
please post them. I have no clue...

Dogie resumed his bile with:
Simply put - we

"Who is we? Leland and Sparky have both publicly posted saying they have
nothing to do with your anticb "whatever" campaign and both have stated
they disagree with your methods. Looks like you were abandoned,
chickiehawk. So who is we? Answer: There is no "we". It is a word that
lends support to your fractured ego that the cbers were responsible
for."

take the fight

"Was no fight 'tll you came here. Still isn't, except in your rooster
head."

to the illegals and we
(self ego stroke number 2)
don't shrink from using their own dirty tactics against them.

"Again, as usual, you are blind to the fact that you came in to this cb
ng calling ANYONE who disagreed with you on any issue, a fag. Tell it
like it is, Dogie, or don't bother telling it."

A cruise thru Google will show the familiar rec.radio.cb 'regulars'
making unprovoked attacks

"A cruise through google will show how you came in here calling people
names and admitting to trolling anyone you can. Now you are trying to
say it is about cb? Right."

and being quite "mean" to Mark Fuller, Aaron Voobner, Kari, Leland or
ANY individual who stood up for themselves with a pro-legal view here in
rec.radio.cb.

"Funny, many more than you just mentioned take a pro legal stance, but
none associate with the group you mentioned. Where are they now? You
mention them (we already know how much other's acceptance and approval
means to you), so why are they not running to your aid? Fact is, they
distanced themselves from you by hiding, because you're a 'tard"

Usually it's a one-sided battle,

"You against the world."

with the majority (illegals) driving off the individual (pro-legal)
with a vigorous campaign of threats and profanity.

"No, these were your tactics and anyone can easily confirm it, as you said, a google search of N8WWM, or of any of the original morons that started your anticb glee club will do quite nicely."

The illegals have historically depended on being able to remain anonymous

"Brother. Look at you. You're hiding now. You won't even get on your radio anymore since someone played your guttersnipe bellowings back to you and you realized you were being taped. How's that for far reaching?"

and take potshots from behind their masks while their opponents stand in the open.

"You went and hid when you were shamed to no end by a cber and haven't shown yourself yet."

The AntiKeyClowns changed all that. We
(ego stroke number 3)
fight on the same level as the illegals do in order to even the playing field. However, you will notice a lot of crying and weeping from the illegals about this. After all, their whole existence is predicated on wielding an unfair advantage on the airwaves. They want the same on Usenet.

"Dogie knows what's best for all and what "they" think and want. (snicker)"

Too bad they can't have it anymore.

"Oh, but nothing has changed, chickiehawk, except you have less supporters now than you ever did, thanks to people like me that you can't intimidate or run off of the cb group, despite your numerous and various attempts. A weekly cb comedy program on triple 5 is now giving you all the attention you apparently seek. The mods for the new Galaxy CB base station are supposedly making the rounds. Anyone see them or need them yet?"

On Fri, 08 Jun 2001 16:35:41 -0400, Handy Andy <CodysPC@Iserve.Net>
wrote:
The issue of "Pirate" is a bit overrated. If "freebanding" is what
labels people "pirates" then so be it. I simply do not see it that way.

Saprky hissed:It's a matter of definition. An 'RF pirate' is a person
that doesn't use the spectrum legally, in effect 'stealing' bandwidth.
The term 'freebander' is misleading, since those frequencies are not
free, they are stolen.

"No, they are still there. Isn't "flooding" misleading, since they are
technically stealing bandwidth from the provder of this service?""

Amps? Well, I personally don't use them. Instead, I advocate the use of
a radio that will do the job, if it doesn't, get another one that will.
You simply save a lot of effort in getting taken in a typical sale for
something that was originally designed as a wheel chock or a doorstop.

Amps are used to steal bandwidth by making the freqency unusable for
some that would otherwise be legal.

"Like fooding the ng with posts and stealing bandwidth here, or doesn'
that count because it is one of your cronies?"

I consider, or look at, people that use CB to abuse other radio
operators as Inbreds.

"And many of us here feel the same about the abusers in the room here.
Just because you feel one is more valid than the other, again Sparky,
doesn't make it so."

If you need further clarification - I'll explain later. It's a personal
attack issue and it doesn't need to be explained all over again. It's a
conduct versus opinion - and works into a grey area that can be
considered off-topic. Check my sig at the end of my posts, you'll see
what I mean. And I'm not ashamed to sign my posts this way. I'm just
like everyone else, I have pet-peeves.

It is not an accident if someone is injured as a result of the illegal
activities of another.

"The only injury I could see happening from a barefoot freebander having
at some DX is to the clown that rudely gets in his face about it and
self professes to spit in his face. Of course, that would never
happen...hehe"

  At best it is called 'criminal negligence'. Abuse of other
operators may be by design or indifference, but never by accident.

"How about abuse of the usenet groupies? Or the room itself? Why don't you show the same concern for them that you profess to show for the cbers? Didn't your pal Dogie abuse many on here? Oh that's right, you pass judgement. We didn't know that Jesus Christ was posting here as Sparky, thanks for letting us know."

I don't find too many of those IB's here in the NG, at least a person that is new makes an effort to get up to speed before the flames start. Posters as of late aren't getting the right consideration when it comes to replies. Not everyone is on the same page. Myself included, at times...
Answering questions one at a time...

:+> Are you saying that others should watch what they say because there
:+> are some that are making a living through the sale of illegal radio
:+> equipment?

Nope. Someone doesn't need to "watch what they say" - because that in itself is not an issue. It's when someone takes on a personal attack on a NG and make accusations that are biased - save it for Email and leave the rest of us alone. Remember that Amateur and non-Amateur are out here - we check our licenses at the door.
Yes, some people make a living at selling radios, export and otherwise. I used to think differently about the "export versus legal" CB issues. I've been "whapped" a few times when it was pointed out that some of the sellers deal
with Amateur operators as well.

I am sure you have noticed amps for sale in this newsgroup that were not advertised in the amateur newsgroups, yet they use the excuse that hams hang out here. If hams are supposed to check their tickets at the door, then it should probably be the hams telling these dealers to post their ads in the appropriate newsgroup. The reality is that the ads are for pirates, ticket or not.

"Puh-leeze! A post by you was already shown where you offered to build and sell an illegal amp. Need to see it again, since you are so fond of regurgitating old posts?"

This NG was for the non-Amateur discussions, and some Amateurs feel that a "Galaxy radio" is a Crappy CB and frown on this NG. I don't necessarily think that - especially now, since RCI/Galaxy/SS lines have taken a more serious tone with the FCC due to RFI/EMI issues.
RFI and EMI topics were
some of the most technical in any NG I've visited - you
don't see too many out here in the past year because many
radical changes have been made towards cleaner TX-ing by
manufacturers. The FCC and the manufactures have been
working together on this. It's good to see that this is
happening.
Plus, it's more of a
patent issue too. Redesign of a network or tank/filter
circuit has been around for some time and manufacturers

don't take kindly to public publishing of their secrets.

Sorry, I totally missed your point here.

"Beause you are not interested in anyones view but your own. Some of the best posters on the group have tried to have civil dialogue with you, but you will have none of it."

We have discussed the intent of this newsgroup before, and I think we both agree that if it was intended to encompass all non-amateur radio then it was poorly named. That is not the fault of the CBer's, but it is not a fatal error. So while the original intent may include GMRS, FRS, radio-astronomy, and a host of other non-ham services, licensed or unlicensed, the name remains rec.radio.cb.

"And all it encompasses, like it or not. You apparently do not. Deal with it."

:+> Or should posters be cautious because
some operators have :+> become
obsessed with freebanding?

No, because, again, Amateurs are also involved with "freebanding". Many Amateurs don't admit to the fact that they started out in CB - they get flamed for it. In the past, Amateurs would visit the NG simply asking for advice about topics that would turn any other Amateur-based NG upside down. This group was a buffer.
I look at this particular issue as, if you must - you know the rules. Pleading ignorance simply doesn't work.

This newsgroup does not have the title rec.radio.amateur.buffer.

:+> Is that what you mean by "SERIOUS" radio operators? Isn't it just as
:+> possible that legal CBer's can also be "serious" radio operators?
:+> Should a "serious" legal operator withhold his comments because it
:+> might offend a "serious" freebander?

When these "posers" go thru my mind, I consider a wide range of different issues; from Foreign country operators, to consideration that Skip noise forces an enthusiast to go elsewhere into quieter portions of the spectrum. Someone paid good money to satisfy a curiosity.

And I paid a lot of money for my house. That doesn't give me any more rights than any other home owner.

"Maybe not in your area, but many areas exist where that statement is false. Someone can put up a beam, but someone else across town cannot simply because of zoning, for just one example. An upscale neighborhood may be less tolerant of a huge beam and a groundplane or dipole may be all that one can use, for another example. If my property is 3 acres or more, and yours is any less, I can have livestock and you cannot, for still yet another example."

A lot of the attacks as of late seem to be oriented towards people that seem not to care. It's the opposite, these people do care enough to a point that they don't want to bother others - they want to be able to communicate. That combined with other that don't care, when you have a big mess.
That brings up the "Serious" side of this. Not everyone sees each other at the same level. In this NG, posters and the regulars have tried to keep an even keel. When someone is searching for information, I attempt to answer if I have an answer. I simply was not raised to pre-judge people. I got slapped if I did. And I do apologize to others if a post was interpreted in the wrong way. I'm not ashamed to admit that I'm wrong.
One of the major points of this NG is for answering questions. To pass judgment or opinion about a person, is not looked on favorably and places the poster in a position to be filtered. Sound Familiar? If you passed judgement or opinions about radios or antennas, that is a technical view and you can get called out on the carpet and explain your reasoning. If you can't explain, you get flamed. You stay on the topic of CB's and its' issues - not drag in the relatives.

You are an anomaly.

"Because you fail to see his point he is an anomaly?? Maybe it hit a little too close to home for you, struck a raw nerve."

Many regulars used to promote and discuss piracy at length while any dicussion of legal operation was flamed.

"That is a lie, except, of course, if you count return fire. Then you are dead on."

  Your posts have indeed been fair to both sides, but that is not true of many other regulars.

"That isn't true either. Most here give the benefit of the doubt until attacked."

The question from the occasional poster may have been answered with goodwill, but if that poster was legal and wished to post regularly, he would get no peace.

"More BS and you know it. Again, just 'cause you say it, don't make it so."

  Perhaps you didn't see it because a lot of the flaming happened in emails,

"Ok. Your word is good enough for us to believe
you. NOT!"

but some of it did occur in the group.

"Some? Some? And for this you took on the persona of the mad cb dictator?"

And I am not just speaking from my own experience: others have emailed me in support of my legal position. Since most of them have been flamed into lurking, they did so confidentially.

"Then respect their wishes and don't even bring them up, which effectively nullifies a claim you couldn't prove any way, which is why you presented it the way you did."

I'm sorry that what you have seen was limited in scope, and may have even gone unnoticed. But there was major aggression towards the legal CBer.

"Not true. Everyone was getting along fairly good and still does, despite you and Dogies best efforts at instigating your malice. If you think you or Dogie disrupted anything, you are mistaken. The discontent has all been centered around Dogie, and you. The attacks have come from Dogie and you."

  Now it is in the open for everyone to see.

"Yep. Despite all y'alls aliases."

Now everyone gets a taste of the unpleasantness that was once reserved for the legitimate CBer

"How so?"

:+> This is a CB newsgroup, not a freebander newsgroup. Who has more :+> justification for voicing their opinions here?

All of us. Anyone interested in radio. I don't see too many posters that push illegal issues and flame others because they use a Pro-538 or a Cobra 19+. If any flames, they usually are to the point of "You seriously need to upgrade" as the intent.

Actually, I don't either. The best radio is the one that does what you want it to do, even if it is a TRC-9. But if someone asked about the best radio to use for talking to the Shuttle, I would probably direct him to a more appropriate newsgroup. When people look at the list of newsgroups and see rec.radio.cb, any reasonable person would think that this group is about CB radio, not ham radio, or cell phones, or police scanners, or RF piracy.

"Um, what you would call "RF Piracy" , according to you, takes place with a cb, by cbers, so the topic is very much pertinent. You can claim otherwise 'till the cows come home, BUT.......jes' 'cause you say it, don't make it so!"
I used to bother professor to a point that he wouldn't answer my questions - but other people noticed. It would start threads that would prove or disprove claims. Even other amp-makers would join and it would turn into a foray of discussion with facts and fiction being hashed over. We never truly got personal unless provoked. Train, Ice, Dennis, Bill, Sean - and many others learned and discussed. We tried to avoid the personal issues and many left because of the tripe that eventually occurred. But during that time, we learned a lot from each other.

Only now, the NG has evolved into something of a shell of it's former life. I still chuckle at myself because of an issue I took up with Dennis about amplifier designs - open loop versus NFB. It was due to an amp he personally liked, and he didn't like me tearing it apart. He called me a "Mud-Duck" and I still laugh at that. This is part of that RFI/EMI topic discussed earlier. We've learned to quit pushing buttons and just sit back and think first. Controlling one's competitive nature is not always an easy task.

:+> We live in a civilized society, and we have to live under laws. :+> Are these laws intended to protect the law-abiding citizen or are :+> they to facilitate illegal activities?

No, once again, as above, pleading ignorance is not going to work. Just as people are willing to risk their lives driving under the influence, or being careless about others - they suffer the consequences. Some with their lives.
It's mother natures way of "thining the herd". I don't need my herd thinned by someone else's stupidity. When you join a Fraternity, or a Club, they also have rules. Some more stringent than common law. If you wish to stay, you have to follow those rules.
Same thing applies to freebanding and amps, if you want to play, be prepared to pay. I never cared for having that type of disposable income to waste on this aspect. I'm not that type of person either.

The purpose of laws is to make it fair and equal for all. Disparity will result in benefits for some at the expense of others. The pirate will pay if he gets caught, but those that have been deprived of their legal rights because of his actions

"Again, you have repeatedly failed to cite who is injured or deprived by barefoot DXing?"

pay regardless of whether he gets caught or not. The CB belongs to all citizens, not just those that choose to use it. The pirate steals that opportunity from everyone. Everyone pays

"How? Many of us talked on cb for years before we learned about jumping freqs. How were we deprived all those years, and how come no one knew about it all those years except you?"

-except- the pirate.

:+> Do the laws favor only those that are "serious" about :+> their hobby or business regardless of it's legality?

When something is beyond it's capacity to hold anything more, issues like this "freebanding and amp" stuff come up. Freebanding due to lack of bandwidth thats open to use - it's an 11-year cycle we can thank the sun for. And Amp stuff because it's too easy to get your hands on one so you can attempt to "stomp" out others that don't share your view.
IMHO - the freebanding

issue is moot compared to the amp issue. A call for help is quenched due to an amp from a careless operator. Linears are not my cup of tea due to such careless and casual use of them just to annoy others. Amps do more damage than a freebander using just a radio - put both together and you have a bad situation going to worse as time goes on.
If amps weren't so easy to get a hold of, there would be a different way of looking at this NG.
The amp issue is a performance issue with consequences.
You can do some serious damage to others if they aren't used properly. And that is a point I side with caution on.
We tend to forget that it's a cafeteria out there. Everyone has the right and privilege to use a radio as they see fit. Except rules are broken and there's no one around to enforce it. When a person sees and hears what is going on, they will take steps to survive. When there is no one around to enforce issues like the above, you can't consider them "pirates" anymore. It's not even illegal, there's simply no way to enforce, or prosecute a person for their stupidity. So, when it Rome, do as the Romans do. Act accordingly. Or if you're more of the Arabic types, ripping out their hearts and being blessed by others for taking on such a task, leads you to think and believe that it's more Anarchy than a CB world.

I'm sorry, this is going to be a point of hard disagreement. As the solar cycle drops, as it has been doing recently, the noise will not. There will be more and bigger amps, and as the buffer bands get filled up the pirates will look for more places to intrude upon.

"Arrogant speculataion Why all of a sudden?
This HAS to be your first solar cycle, otherwise you would never have made an erroneous statement such as that."

Things will not get better because of the solar cycle, but they will get worse because the FCC is very poorly managed (assuming there is any leadership there at all).
Just because some have chosen to ignore the law doesn't give anyone else the 'right' to do the same ad populum.

"That's Dogie's excuse for his behavior in here. He says, "Look at how some of these guys talked to me," and uses that as an excuse to do it himself even though he started all the porn and accusatory ridiculous slamming and spamming and vile, disgusting connotations.. Why haven't you ever pointed this out to him, hmm?"

All that does is make a bad situation worse and puts you in the same monkey barrel with the rest of them.

:+> What does "illegal to you" mean? Does it mean that laws are only :+>
broken if you think they are broken? Just because someone may disagree

:+> with a law, does that make it any less legal?

When dealing with international laws, I can't say much because I'm not into politics. But I think that you and I agree to a lot of different points. Only thing that I can see that may oppose this is the lack of consideration for others. Thats where the laws get broken. An open mind is needed to consider all aspects and I've described a few above. I can't control others, but working together without harassment, an amicable solution can be obtained if both sides care enough to salvage what is left, and make concessions to keep such a hobby alive.

Andy, you are a cool dude, but when a thief tries to steal my stuff

"The freeband isn't yours. You're not even allowed on it. Bad analogy, therefore, void."

  I'm not going to say, "You can have the silverware if you leave the jewelry." Suggesting to someone that they should make such concessions is called 'racketeering'.

:+> I'm not flaming here, Andy. These are all legitimate questions.

This post by far, has met all the criteria for a good discussion.

BTW, how are you? ;-)

Not bad. I haven't checked out your web page
lately. Any changes?

Jay in the Mojave <jay123a@qnet.com> wrote:
Do you really think your making any one change their ways? It would be better to help out, and get people interested in Ham Radio than turn them all off as your doing.

That argument does not hold water. As Andy says, there is a new breed of CBer, e.g. the "serious" operator, the life-long freebander/keydowner. These are people like Tim Nebo, Twisty, etc. who plan NEVER to get a ham license.
Others (like YOU) hold ham licenses yet still - for whatever antisocial reason - devote themselves to illegal operation on CB. If this NG is, as you suggest, a training ground for new hams, then what kind of "education" can these prospects get here? They are exposed to people like Twistedhed and Tim Nebo and Pinhead and Punisha and Phoneman and Eitner who tell them that breaking the law is OK, stealing frequencies is justified, and "more watts" is what radio is all about. If someone is interested in ham radio they will gravitate towards it anyway. They don't need an illegal CB community for support.

"The gentlemen you named have never said what you attribute to them, anywhere, period. Your anticb club is becoming quite desperate and frustrated."

Andy,
You are one of the few who might leave the fold and be sorely missed.Whole over the years I've had the opportunity to meet many in this group, You are one of the ones I have not had the occasion to meet. I'd tip a glass or raise a fork with you any time sir! I will continue to share (usually in mail) with others in the group. I've been to the big breaks and met so many of the "keyclowns" and a better bunch would be hard to put together.
Good luck and come back soon.
Train

If the Earthlink software package is properly removed via
the "control panel" and add/remove programs to delete it,
there should be no traces of the program left on your machine
and you should be able to load 5.5 ie or whatever without any
ill effects on your machine. There is absolutely no reason
to have to reload all your software to get the pc back to normal.
Not to be smart, but if you had Internet Explorer loaded to start
with, why would you have even bothered with the Earthlink
package? Also, if you properly removed the Earthlink package
and had these problems, you should have notified tech support
at 800-890-5128 and advised them of the problem. They like
to hear about these problems.
Mr.K.

Feel free to be smart. The software was removed as you suggest and in fact under the supervision of Earthlink's Tech Services. Quite a number of oddities remained including the Earthlink name, the funny colors, and the lack of ability to use links. It may not have necessary to blow it up but it was faster and more certain than fiddling.

As for why it was installed in the first place, they bought my ISP. One quiet day two orange packets arrive Fed Ex. As they were dismembering my old provider so it seemed reasonable to join the program. Wrong.

Dick

Seems like you hold that title all by yourself Twisted. It took you weeks to accumulate the pile of headers you mistakenly attributed to me. People kept pointing out your mistakes, but you kept at it anyway. Now here you are at it again. I though you had enough of that nonsense already. You want people to go back and start counting how many times you screwed up misreading headers? That would settle things in that regard once and for all. You keep giving people good reasons to go back and see how you made a fool of yourself. You really must like it. No wonder the "TwistyTweaker" group finds you so much fun to kick around like a football.

Everyone was still sore from laughing at Dogie from last time when he cried: Keep an eye on your mailbox for a letter with a government address on it.

"Yea. He told me the same thing last December. He imagines he is surrounded by cb gangsters..(chuckle) Can you imagine these guys together? Sparky with my patented and named directional finder jumping out of bushes at old ladies whose hearing aids he mistook for an unwanted source of RF waves, and Dogie hurling obscenities at the passerbys with anglo-saxon terms..."Are YOU twisted, you *%@##$$? LMAO! He's just mad 'cause he has nothin' left. No radio equipment, no friends, and even the regular, straight shooters on barefoot 40 channel radios that once might have saw his point have deserted him."

>
>"No, they are still there. Isn't "flooding" misleading, since they are
>technically stealing bandwidth from the provder of this service?""

So you talk on the freeband becasue Doug floods the NG Is that what your twisted Logic is saying.

>
>"Like fooding the ng with posts and stealing bandwidth here, or doesn'
>that count because it is one of your cronies?"

I guess you don't count all your off cb radio topics stealing bandwidth, or all Mopedholic, or Randys, Or Train, Or Sharky? I guess its turn the other cheeck when we get flooded with posts of just headers, with no topic relating to cb radio Is That ok Twisitecrit? You and your bunch can do as you please (ala radio) and the rest must follow the letter of the law. Who the Fuck died and made you the piece of shit you are?

>"And many of us here feel the same about the abusers in the room here.
>Just because you feel one is more valid than the other, again Sparky,
>doesn't make it so."

The same again Titsie goes for you jsut because you say doesnt make it so. You are an abuser just as much as anyone. You waste as much Bandwidth replying because you are the almighty Twitsie and you cant let anyone get one up on you. So you are Just as guilty every post that is made you feel the need to answer . Ahhh Loser!>"The only injury I could see happening from a barefoot freebander having
>at some DX is to the clown that rudely gets in his face about it and
>self professes to spit in his face. Of course, that would never
>happen...hehe"

I guess your the only freebander out there no one runs power on the freeband? Its all just legal radios and 4/12 watts of power. Thats your problem twitise you think everyone is as stupid as you. All these Texas Stars, Xforce amps with SSB are used between 1-40 Get off the crack pipe you idiot

>"Beause you are not interested in anyones view but your own. Some of the
>best posters on the group have tried to have civil dialogue with you,
>but you will have none of it."
Of course you are not one of the best posters on here. You are a shit follower. You never ever offered anyone any technical advise. I can see why you don't have any. Your claim to fame here is hey catch you on the triple nickle Dx is good! Duh!

>"And all it encompasses, like it or not. You apparently do not. Deal
>with it."

Twitise you had better read the Charter of this NG It is for the Citizens Band 1-40

>"More BS and you know it. Again, just 'cause you say it, don't make it
>so."

Touche! >"Again, you have repeatedly failed to cite who is injured or deprived by
>barefoot DXing?"
>

Who barefoot Cb's Oh that right you do . Just because you say so doesnt make it so. Is that the same as well officer I was only going over the speedlimit by 10 miles an hour not 50. Ya Know who is bothered the services that were deignated to that band. How would you like to be the someone who is Officialy assigned to that freq and hear Your stupid ass calling CQ. Barefoot or not, with 10/11 meters it is a world wide band. You are hurting people all over but just because you dont know it it's ok. So don't hand me that shit about who gets hurt by a little innocent dxing. You either allowed there or your not its that simple!

That was a thought, and the OP-amp can be run from a single supply as
well. But the bottom half of the cycle needs to drop below ground,
which can't be done with a single supply unless you add extra parts.

The OP-amp circuit is simpler, cheaper, and the output has a 50% duty
cycle (can't do that with a 555). The 555 also needs a pull-up on the
output, while the OP-amp doesn't.

You can still use a single 9V battery, just add a voltage divider and
a couple caps.

Date: 2001-06-11 22:32:38 UTC
From: AntiKeyClown News Bulletin <news@anti.com>
Message-ID: <3b2538f6$1@news2.mibx.net>
Source record: 85182

(AP) Former East Coast Keyclown "Prozac" has defected to the AntiKeyClown Group causing illegal CBers much concern.

"He knows too much," said Pinhead, aka Dr. Doolittle, Tappindatass etc. "a guy like that could put our whole illegal system at risk".

Prozac commented that his decision to abandon the illegal CB lifestyle was prompted by the hypocrisy of his cohorts and the fact that "what they do is lame". Spokesmen for the AntiKeyClown Organization say they expect many more such defections in weeks to follow as the pressure is turned up on the keyclown community.

Source record: 85349

Seems like you hold that title all by yourself Twisted. It took you
weeks to accumulate the pile of headers you mistakenly attributed to me.
"I didn't misattribute anything to you. You started it by insisting and
lying to your fellow ham operators that a forged post in a hammie room
was by me, and for no apparent reason at all. You were caught and
exposed and can't get past it. Any "misattributions" must have been
"friendly fire", but you would have to accept that aligning yourself
with Dogie and Sparky and playing cb games with cbers a step ahead of
you on the evolutionary ladder."

People kept pointing out your mistakes,

"And the ham operators pointed out yours."

but you kept at it anyway. Now here you are at it again.

"As you refused to listen. You even attacked another hammie and quickly
attempted to change the subject that you still can't answer after 3
months. How can a computer grad, such as yourself, not tell a webtvers
post from a forged one?"

I though you had enough of that nonsense already. You want people to go
back and start counting how many times you screwed up misreading
headers?

"One better. Let's look how you became involved. You forged me, then
insisted it was authentic. Anything afterwards in moot."

That would settle things in that regard once and for all.

"As it would if you can answer why you were attempting to frame me in a
hammie forum."

You keep giving people good reasons to go back and see how you made a
fool of yourself.

"You were quite adept at doing that when you were caught lying about
that post. I have a post of you bragging about your numerous years of
experience in computers and radio, touching on algorithm's
(erroneously), but you are unable to explain away that error in
judgement where you slipped and were caught."

You really must like it. No wonder the "TwistyTweaker" group finds you
so much fun to kick around like a football.

If it's spam you're after, you should get on that American Eagle CB Club
"AE 352" guy's case. He posts the same message again and again and again.

Then try "Cookiemade". He's posted redundant ads for his "merchandise".

Ok, now I see you got suckered by "The Incident". That link right next to the SETI link probably got you going. And then you briefly saw my "fourth dimension" page but didn't actually read it.

Yeah, I can see where you thought I was out chasing little green men. That's because the site is written for people with some intelligence, not for morons looking to belittle the author. Landshark already tried that and it backfired in his face.

Got something else in your arsenal?

As an old-timer here, I think you're all wet. Go lay down on the porch.

I'm going to go talk skip with my stock PC-122 (with stock mike) hooked
to a TEXAS STAR 250 out of my mobile. It's too nice to stay in tonight...

No extra channels or echoes or roger beeps here...good day!

"More watts" is what CB is all about?

You'd think so by reading some of the "technical discussions" in the archives of this group. Aside from the occasion newbie question about antennas, all the advice and experimentation seems to be centered around RF power and how to get more of it.

Boring.

After the fifteenth discussion about how to get the meter to go all the way to the right, it gets boring.

How about more efficient antennas? (No interest)

How about more efficient receivers? (No interest)

How about more efficient modulation methods, EQ, compression, audio shaping, etc? (No interest)

No, it's the same old discussions about power, power, power, power.

Boring.

Spam is more a matter of intent than content. And there is a matter of
degree. The guy selling ancient copies of an ancient book is spam for sure
but handleable by a killfile so who cares.
Spam is simply any intent to hijack a group for personal purposes, usually
but not always financial. AE352 is a spammer but again a handleable one.

So, I guess, are those advertising auctions on Ebay, etc. Message rules handle these.

This leaves us with unidentified crap as in the current case, not a spammer merely a crapper. Is he using it for personal purposes, yes; He is kidding himself, a fairly normal human activity.

Another idea of spam is abuse of an audience massed for another purpose entirely. Lots of things qualify for that and that is why people, like me, react to e-mail spam with pretty good bozo filters; mine burped a bit in fact when I just got on. But I volunteered for this so the standard is a bit looser. I can unvolunteer with a few keystrokes.

Most cross-posts and all multiple posts are spam per se. Profanity and sexual references are spam per se. Being part of the post-vasectomy set (my 50th birthday gift to me) I find most references more comical than threatening.

Truthfully, I don't spend a lot of effort worrying about what spam is. My interests are purely recreational so I live with it or deal with it, whatever the current 'it' might be.

It's overhead, man

I too have heard that she is in El Paso, TX. I have heard her in
MI,MS,PA,TN, and TX. I know she is annoying as hell and wish we could
find where she is and put an end to it. She has to be pushing some
MAJOR power to get out like she does and as loud and clear.

> *one of your stories about the Navy?

Whatever else I may be, I am certainly not Navy. Wouldn't know a Davemade if it hit me on the toes or even why I should care. And the only Kraco anything I ever dealt with was junk.

My interests here are purely recreational. I have some technical competance and a few years under the belt (and over it too). There are large areas of the CB realm that I know not a lot about, notably mobile operation. My experience is on the ham bands and some time doing broadcast engineering for fun and profit. You will note that I tend to stay out of areas beyond my ken, preferring to learn a bit instead.

One of the minor advantages of being somewhat of an antique (57 as you can readily find from QRZ.com) is a view that goes back to the beginning of CB as 17W0908 and in fact to 11 meters as a ham band. I vas dere Sharlie. Amps appeared almost instantly because 5 watts was stupeeed. Freebanding was not far behind and is, in fact, the reason Techs (code tested ones anyway) got 10 meter privleges. I have elmered well over a dozen SSB freebanders and that was in the 13wpm days; my only problem was that they had better gear than I did. I don't view the problem with quite the missionary zeal that you do nor do I overestimate my ability to make a dent in the problem. Forty years of legal operation has given me a real case of the ass with unidentified bozos, however. Your campaign causes me to question both your sanity and testosterone level.

Lots of things are fun. Prof selling his Muntz amps is absolutely hilarious. Antennas are always fun. We have had some interesting technical discussions. Until you showed up, I often went weeks without having a lot to add.

You play cop, you are a third-rate Channel Master, and you do so under an assumed identity with liberal doses of juvenile sexuality. You are not fun, you are BOOOOOOOOOOORRRRing.

1130. Super Star 360 FM for Sale

Newsgroup: rec.radio.cb
Date: 2001-06-12 02:04:48 UTC
From: hfdps016removethis@csun.edu
Message-ID: <3B2578C0.67DE4E8A@csun.edu>
Source record: 85369
Cross-posted to: rec.radio.swap,rec.radio.cb

I had this unit for auction on Ebay but they pulled it off, forcing me to Usenet.

I have two of these "export" radios, they have not been used for about eight years but worked great and I presume they still do. They have FM and CW in addition to AM, LSB and USB. The coarse/fine tune affects the transmit frequency as well as receive. The "roger beep" feature is switchable via the tone high/low switch. They have 40 channels above and 40 channels below, in addition to the standard 40 channels.

The unit includes mounting bracket, power cable and microphone. I can send a photo to serious buyers.

$175 each or sold to the highest "bidder."

I will ship within the United States only.

Please "remove this" from my e-mail address to reply.

1131. MEETING AT THE KEYCLOWN KLUBHOUSE

Newsgroup: rec.radio.cb
Date: 2001-06-12 02:16:55 UTC

(THE SCENE: Moped's Dinghy somewhere in the Atlantic. Various KeyClowns are huddled under a blanket, wet and shivering)

TWISTEDHED: HELP SOMEBODY! We're sinking! Where are we?

MOPED: We're NOT sinking, that's just bilge water. And I don't know where we are

so stop asking me godammit! We'll drift ashore eventually.

LANDSHARK: Do you think there's a chance we could land on....Fire Island?

MOPED: No, you queer gaylord. Sit your faggy ass down and stop trying to flash your underwear at us. It's disgusting!

LANDSHARK: Watch your language or I'll turn you in for TOS violations you intolerant beast!

MOPED: Who are you calling a beast?!!

TWISTEDHED: Hey, dogs are beasts...does that mean I can beat Moped?

RANDY: HEY! (whistles loudly) ENOUGH! Stow the bickering fellows! Let's get the keyclown meeting underway! If we want to keep the newsgroup illegal we need to STICK TOGETHER! Okay, first order of business. Moped, read the minutes of the last meeting.

MOPED: (fumbles with pages) Uh...well...uh...er...uhhh.....

RANDY: What's the problem?

TWISTEDHED: HE CAN'T READ! (whispers to Randy) Can I beat him now?

RANDY: No. There'll be no beating. Landshark, you read it for him. And take off

that Marilyn Monroe wig.

LANDSHARK: Darn, I just had it permed! (sashays over and grabs the pages from Moped) It says here... "The Menendez defense was forwarded to ISP to remind TOS pertaining to a cb ng on topic with the addy to beat the hound again and again my right to shoot college kids as a journalist of renown"

RANDY: What the hell does THAT mean?

LANDSHARK: How the hell should I know? Twistedhed wrote it. It makes NO sense whatsoever.

TWISTEDHED: (shrugs) Don't ask ME what it means.

RANDY: OK...forget the minutes of last meeting. Let's move on to new business. What are we going to do about Prozac's defection?

MOPED: He left?

TWISTEDHED: That little weasel went over to the AntiKeyClowns. He deserves to be...beaten like a dog....yeah...that's it....LIKE A DOG!

LANDSHARK: You could beat ME if you want. As long I can wear my leather dress.

RANDY: CAN THAT CRAP, you queers! We need to get down to business. Now this week's guest speaker is TRAIN. Train is gonna show us how to get 5 kilowatts out

of a Kraco CB rig.

TRAIN: Look guys, I been doin this since I was a pup and I'll NEVER GO LEGAL, NEVER, so pay attention.

TWISTEDHED: Did you ever get a good beating? I mean, when you were a pup?

TRAIN: What's with this guy? Is he psycho?

RANDY: Ignore him. Go on, Train.

TRAIN: OK. The main idea is to outrageously violate the FCC rules. So (demonstrating) we just turn all the screw adjustments to the right, slap in a bunch of pills I got from hot car stereos, then wire the whole shebang to this VOA transmitter I traded Davemade some cocaine for, and....

MOPED: This is WAY too technical! When do we get to the part about cuttin' people's lips off?

TRAIN: Son, you key down with this and you cut lips off for 3000 miles in all directions on all frequencies....guarun-FUCKING-teed, heh heh.

RANDY: AND THAT'S WHAT WE LIKE! RIGHT BOYS?

ALL: (weakly) right!

RANDY: What's wrong now?

LANDSHARK: Moped peed on my dress!

MOPED: It was Twisty!

TWISTEDHED: He lies! It's a conspiracy! They're ALL against me! It was Leland! It was Glenn Sparks! It was Regis Philbin!!!!!

RANDY: I give up. Meeting adjourned!

LANDSHARK: (waves to passing boat) YOO HOO! SAILORS! IS THAT A NO-NAME IN YOUR POCKET OR ARE YOU JUST GL

This will probably get in major trouble with the FCC, but here goes anyway. When I was young(11ish or so).....I tapped the phone line to my sister's room in the attic, ran a wire to my room, and installed an inconspicuous 1/8th inch jack on the intercom wall plate. That way, I could plug into any call she was having, and be disconnected by the time she thought I might be on another phone listening. My friends and I had a blast with that, and would drop little hints that really made her wonder! I finally told her about it last year.....at age 39.

Now, to keep things on topic, I also "modified" a 100mw, channel 14 walkie talkie to accept a D-104. With the gain that mike had, it was an awesome listening tool! I also took same radio, and......dare I tell the anti's.....um, added a substantial length of antenna to it. Around 6 feet or so of thin brass brazing rods. OK.....I don't deny it! I guess the "keyclown" monger fits. But on the upside, I was able to get about 3 miles out of that little radio on open water in my little flat-bottom boat. Probably blew the type acceptance all to hell though.....guess I was lucky that Uncle Charlie wasn't around.(and the anti's) I'm sure the ERP was phenomenal!

Get a fucking life! I have been a ham for many years. It is STRICTLY a hobby and I have yet to witness CBers making a mess of our ham bands. The majority of doing so are actually ham operators on the upper edge of our 80 meter band. Let it go, already. It's people like you who have made it impossible for us to sell our legal 10 meter radios on eBay.

BTW, I'm not a no-code as you probably already labeled me. I'm an Extra class and have been for 10 years.

Why waste your time and energy getting mad about something when you can still continue to use the amateur bands and enjoy this wonderful hobby? Don't get mad, get glad.

Very clever attempt at legitimizing illegal CB, Randy. You *know* we've all done

things like that. However, most of us don't use those youthful experiments as an

excuse to sell illegal CB amps or export radios in defiance of federal law or operate pirate transmitters on unauthorized frequencies or (for that matter) do whatever we want to whomever we want whenever we want to. What seems to totally evade you is the concept that personal responsibility has nothing to do with slavish obeyance to rules. It's not about the rules, it's about common sense and

respect for the other guy. When you routinely abuse public property (the airwaves) you render them useless for others. If you use the excuse that "everyone's doing it" as your justification for trampling on radio spectrum belonging to others or blowing off RF power restrictions (that others remain limited by) you're no better than a looter, i.e. a common

>(AP) Former East Coast Keyclown "Prozac" has defected to the AntiKeyClown
>Group causing illegal CBers much concern.
>
>"He knows too much," said Pinhead

incorrect assumption on your part. i never said any such thing .....if the truth be known, i think he knows far too little , considering he is a college type person.....i mean if this type of person is what is being produced from the universities in new jersey .....they have my heart felt condolences. acutally i think that prozac has spent just a wee bit too much time with his earphones on listening to his portable cd player, he bought using his daddy's credit card........

, aka Dr. Doolittle, Tappindatass etc. "a
>guy like that could put our whole illegal system at risk".
>

i think not old boy....it has not been at risk and will not be, probably ever,.....at least until the one world government starts, then some of you will see.....

>Prozac commented that his decision to abandon the illegal CB lifestyle was
>prompted by the hypocrisy of his cohorts and the fact that "what they do
>is lame".

oh my, that illegal cb lifestyle is really something , isn't it???? there has been and will never be any hypocrisy exhibited by anyone i know of on this newsgroup except you pussies.......

the thing is kind of lame though, i will have to admit,.......and the only reason i say that is there is a shortage of attractive babes around here,,,,,,,but other than that, ...i enjoy dropping the maul on all my ducks........and i would certainly do the thing on a certain person in jersey if he would venture out of his back yard,.....no doubt about it.......

Spokesmen for the homosexual group known as the AntiKeyClown mudduck Organization say they expect many more such defections from other mudduck pussies, in weeks to follow as the crying, whining and sniveling ascends to new heights. the homosexual pussies will continue to try and pressure the long nose community.................

antikeydown homos......quit crying and start buying you pussies.........head
out..............

I was just wondering if any of you can remember the publication of S-9 magazine? I had a few copies of it back in the late 70s but have not seen or heard of it in years. It was totally devoted to CB and had good antenna articles and product reviews. As well it had adds from all over North America. I would like to take a flip through the pages of it again but of cores it is not in publication now. any of you have copies still hanging around or even heard of it?

Hi Doug,
Why no, not in your wildest fantasy's.
You just don't get it do you? You are
so fixed with trying to piss people off,
but most people don't care about what
you post..
What is it that you have just posted, have
to do with illegal or for that fact, legal radio?
It just show that you are here not to talk
about legal or illegal radio, you really should
try to seek help...................

Just one question.......how did we all wind up in Mopar's dinghy....no less in the Atlantic? Actually, I have another question......with a sense of humor like you seem to possess, and a knack for seeing the irony in a situation, why the hell are you not putting those talents to good use? I have to admit, I really did laugh my ass off at this dramatization! You missed your calling guy! Thanks for the "from the diaphragm" laugh!

Later

We is not Doug. If you really want to talk to Doug, send him mail to n8wwm@arrl.net,
but if you rouse him, be prepared for another flood in here.

>Why no, not in your wildest fantasy's.
>You just don't get it do you?

You are right. Why would someone post "sex partner wanted" ads in TS/TV newsgroups
with the same email address and ISP that he uses in a rec.radio newsgroup
and then try to deny it? We don't get it.

>You are
>so fixed with trying to piss people off,
>but most people don't care about what
>you post..

Boy, it sure don't look that way from where we sit. Any little thing we put
on here gets dozens of replies. Even when we don't post, Twisty or Tim Nebo
or some other keyclown practically begs us to respond to their lame taunts.

> What is it that you have just posted, have
>to do with illegal or for that fact, legal radio?

Landshark wrote earlier:

>try to seek help.....

We have plenty of help. Tons of help. Prozac just joined us. And more illegal
CBers are coming over each day.

Have a nice time at the "track".

ATTN KEYCLOWNS*

Pining for Doug? Miss his way with words and clever graphical entertainments? Want a little more of N8WWM in the NG?

Who doesn't?

Now that the AntiKeyClown Organization has taken over duties in rec.radio.cb, Doug is off pursuing other diversions. But you KeyClowns get lonely. You refuse to accept he's not really here. You even address posts to him. "Hi Doug"..."Yes Doug"..."Oh Doug" this...and "My, my, Doug" that. It's both pathetic and touching at the same time. If only there was a way to sate your desires for the absent, sorely missed Doug!

Well now there IS a way!

Just drop him a note at n8wwm@arrl.net

Say "Doug! We KeyClowns crave your mighty presence here in rec.radio.cb! Please, please PLEASE come and push our faces in our own feces some more because we as masochists love that kind of treatment!"

Then put your oilskins and wading boots on.

It was published by the same bunch that does CQ magazine. They were going to make big bucks in the 70s CB craze and recover from Wayne Green's defection to start 73. CQ often crosses the invisible Amateur/CB border to the sounds of wailing. Unfortunately it is still not a really great magazine.

Source record: 85202

Hello everybody,

Does anyone have any information re. professional services available to correct (restore) small nicks or surface blems on older CB or amateur rigs? Most "vintage radio" restoration shops appear to specialize in restoring the "functionality" only and I have that base covered. I tried performing a Google search for various "cosmetic" restoration services and I got everything from plastic coating for old wooden radios to plastic surgery.:-D I'm no real collector, however I was able to bag my old 1977 "dream" CB set-up and am looking for a "mint" FT-757GX as well.

The radio is a President Madison, (FCC type certified and completely unmodified!) circa 1977, "brand new in the box." Didn't really believe it until I removed it from the box to find ALL the protective plastic bags and card stock perfectly intact. All works well, however...there appears to be ONE very small surface blem; (possibly during manufacture) A very small nick on the to edge of the front faceplate bezel. Since I'm not a collector and plan on using this rig, I don't mind spending the money required to correct this small, but nonetheless present, blemish. I've provided a link to a similar rig so you can get a feel of the radio. It's not in pristine condition but it's the same model. Thanks so much for any help you may render.

> months. How can a computer grad, such as yourself, not tell a webtvers
> post from a forged one?"

I never bothered to look because I don't see the point in forging posts anyway so it didn't cross my mind at the time. If it looks like you, squeaks like you, and signs your name to it, well you got the blame. And I most definitely did catch you red-handed giving out my name and phone number in response to those phony for-sale ads. It's really hard, I'd say impossible, to send something to Twistedhed@webtv.net and have a response come back with my name and phone number as contact information, in the returned E-mail from the above address, and now you want to claim it wasn't you? If any of the stories are true that you beat puppies, then maybe your dog has a bone to pick, and wanted to get even. Get a life Twisted. That's what I call "verification" of you up to no good.

Given the nature of how the Internet works without the posting logs from the ISP, who hosts the account(s) in question, it's just a wild a** guess who is really who. Particularly when dynamic IP addresses are used. The best you'll ever do for sure is isolate the domain the post came from. If the ISP is a large one then the probability that one or more posts, from different accounts, can be traced to the same domain is not surprising either. Finally Twisted even with a unique ID all that does is identify the account, not who is using it. And as a computer grad I know what a waste of time it is screwing around trying to accuse people of forging posts without some other solid means of verification, such as access to an ISP's internal logs. They only way you'll ever see something like that is with a badge and a court issued warrant which you don't have. That's why the advice has always been to forward the complete post, E-mail, or what-have-you to the ISP. They are the only ones that have all the pieces of the puzzle. So if you have been wasting your time sending my ISP complaints, guess what? I haven't heard a thing from them, and never expect to either. As a matter of fact since your so screwed up I bet they don't even look at anything from you any more, they most likely have your E-mail address in their killfile.

> "One better. Let's look how you became involved. You forged me, then
> insisted it was authentic. Anything afterwards in moot."

Nobody on this news group has ever agreed with you on that account, and none will, they know better. As you well know it was pointed out to you where and how you were going wrong. There seems to be one or more people on this news group who are network administrators, or know somebody who is, and none of

them are sticking their neck out to make the wild claims you are. Why don't you just face facts Twisted, you're out of your league, over your head, and totally clueless.

Shit, it aint even that.. CB in general has gotten that way.. Here in Colorado, you are lucky to have ONE actual conversation an evening that doesnt entail talking shit to a trucker, bickering about which side of town has the best and loudest radios, who's the biggest toddler on the block etc.. CB really isnt any fun anymore unless you are some idiot that either likes to complain, cause problems or just plain fight about NOTHING.. 99% of these idiots are big mouths on the radio, but when you try and get up in their faces IRL their little Bill Gates asses run off crying and to hide.

When i first started using the radio, god, like 16 years ago, people actualy talked and had something with some substance to talk about. Well thats basicly what has happened to this group, no one gives a shit about anything except who can come up with the next latest and greatest come back or put down.. How fucking childish have we gotten people? I guess if you missed out on being the big bad bully in grade school or were picked on all your childhood then this is your way to get to be the big bad moron..

So if anyone wants to start a new group that will actualy have some substance instead of bickering i would be more than happy to start reading and posting there.. I hope Colorado is the only state with these problems, but i seriously doubt it from what i hear from most of the truckers that come through town that arnt too busy joining in the BS..

Perhaps you are "lucky" and got a good one! Or, you are using your Galaxy on AM, where a few hundred cycles does not show up as a problem.

Mine are used on SSB and CW in Amateur service, working rigs like Kenwood, Collins, Yaesu, etc. From the house, I can put in a standard offset of .2 and I am close to the true frequency. In the car, where the temperature varies from 50F to 125F this time of year, the problem is more pronounced.

1177. Re: Weekend CB update with Twisty (Undoing the mess by Sparky andCo.)

Newsgroup: rec.radio.cb
Date: 2001-06-12 16:25:33 UTC
From: twistedhed@webtv.net
Message-ID: <10361-3B26427D-97@storefull-128.iap.bryant.webtv.net>
Source record: 85217

I never bothered to look because I don't see the point in forging posts

"Really? I ain;t the only one you forged. Matter of fact, you forged someone else with such frequency, that their sig is now a disclaimer alluding to your games."

anyway so it didn't cross my mind at the time.

"Well, it must have crossed your mind, Leland, because when it was pointed out by another licensed amateur that the post wasn't made by me but a forge, you attacked that ham operator and insisted it was indeed authentic. Why would you do that without verifying where it came from? You thought that once you obtained a nocode ham license that you would be treated with some type of reverance by us cbers and when that didn't happen, your ego was wounded, so you began to harass us."

If it looks like you, squeaks like you, and signs your name to it, well you got the blame. And I most definitely did catch you red-handed giving out my name and phone number in response to those phony for-sale ads. It's really hard, I'd say impossible, to send something to Twistedhed@webtv.net

"Oh, you mean all those emails you sent under false identities that you claimed you never do WAS you? Of course I knew it was you, which is why I responded in kind. I said it was you when you were still denying it. You self-destruct quite nicely."

You even and have a response come back with my name and phone number as contact information, in the returned E-mail from the above address, and now you want to claim it wasn't you? If any of the stories are true that you beat puppies, then maybe your dog has a bone to pick, and wanted to get even. Get a life Twisted.

"See, I have a great life, and you, Dogie and sparky feel compelled to be a part of it."

That's what I call "verification" of you up to no good.

"Yea, me too. Whoppin' puppies and smoking cb."

Given the nature of how the Internet works

"Ok Leland, we'll indulge your ego stroke for a second, bestow upon us your knowledge."

without the posting logs from the ISP, who hosts the account(s) in question, it's just a wild a** guess who is really who. Particularly when dynamic IP addresses are used. The best you'll ever do for sure is

isolate the domain the post came from. If the ISP is a large one then the probability that one or more posts, from different accounts, can be traced to the same domain is not surprising either. Finally Twisted even with a unique ID all that does is identify the account, not who is using it. And as a computer grad I know what a waste of time it is screwing around trying to accuse people of forging posts without some other solid means of verification, such as access to an ISP's internal logs. They only way you'll ever see something like that is with a badge and a court issued warrant

"Which is what I told you last week after you threatened me with legal acton in email. I see I am still good enough to plagiarize by all three of you."

which you don't have. That's why the advice has always been to forward the complete post, E-mail, or what-have-you to the ISP. They are the only ones that have all the pieces of the puzzle. So if you have been wasting your time

"Leland, my time is never wasted. I do what I wnat, when I want. even have you girls sinking in your cb lies, responding around the clock."

sending my ISP complaints, guess what? I haven't heard a thing from them, and never expect to either. As a matter of fact since your so screwed up I bet they don't even look at anything from you any more,

"Well, it is obvious someone complained about you, but it wasn't me. You slipped and caught yourself so there was no need to complain. The only one I complained about was Dogie for spamming and flooding and forging. You can say whatever you want about me, that is your right, but if you flood or forge, I will complain."

they most likely have your E-mail address in their killfile.

"One better. Let's look how you became involved. You forged me, then insisted it was authentic. Anything afterwards in moot."

Nobody on this news group has ever agreed with you on that account,

"Here we go. It didn't happen on this ng, does that somehow make you feel more credible with your lies by saying "Nobody on this ng?' You always look to others for validity, and you are lying, which is so easily proved I won't even bother. You were dressed down by several licensed amateurs for your fiendishness on the hammie forum, which included you forging me and attributing it to me, SEVERAL times, even when pointed out the error you made. If you were smart, you would have dropped it, but your ego dictated you "get one up" on anyone that pointed out your error...thus..you made your own bed, which is why you are looked upon as you are in the ham circles, as well as cb and the main reason you are hiding here in the cb room instead of the hams is they won't have any of you."

and none will, they know better.

"They" do know better. How many friends you have here, Leland? Again, you are so wrapped up in an approval rating since yours is so poor, let's get to the heart of the matter where you have been trying to take this anyway for so long. "We". "Your favorite words. Let's see. I count two people that post to you on a regular basis, Spark and Dogie, and the occasional ham that corrects your nocode common mistakes."

As you well know it was pointed out to you where and how you were going wrong. There seems to be one or more people on this news group who are network administrators, or know somebody who is, and none of them are sticking their neck out to make the wild claims you are.

"Thats' not their job, but they are the same admins that spanked Dogie. I am certain if you forged them as you did me, they would definitely, "stick their neck out."

Why don't you just face facts Twisted, you're out of your league, over your head, and totally clueless.

"You say that everytime you get found doing something wrong, Leland. You forged me, you forged Tim, and you still lie like hell about it. Why are you avoiding the cb topic I posed to you? Did you not say that only criminal minds seek to get around the rules? I saw a post from you looking to get around the rules for an antenna system in your HUD housing. What did you come up with? Does it receive the cb channels well? How long have you been "getting aroud the rules" while bashing others for the same thing? You are a hypocrite for trashing cbers, Leland, when your own posts show you doing the same thing, innocently seeking a way to get on the air and away from the antenna police. It's ok for you to pick and choose which rules and regulations to obey? Your words, son, your words."

I've watched this pile of dung get larger and larger until all who dared say anything at all in contrast with what Leland, Dogie, or Sparky said were attacked or slammed. Sparky and Dogie admitted trolling, Leland denies it, but the FACTS speak for themselves.You guys are agitators. Maybe not at first, but you all are now. At first I thought you three may have a personal problem, maybe even a legitimate gripe or two about CB, but it became an obsession for you. Nobody on the group takes any of you serious anymore, so you took to agitating.
This is what happens on the radio. People like you three try to get involved with CB locals; but you cuss on the air, dead key, harass people, play music,, don't ask for breaks, etc. I believe the way you 3 conduct yourself here is almost parallel to the way you conduct yourselves on the air, in fact, I am quite certain of it.

Do you think ONE person would have all this time? We are many. And we DEFINITELY do not want to be the "group dictator". Absolute power corrupts absolutely. That's why Doug had to go away and rest. (But if you keep calling him he might come back, that's what we were trying to tell you) No dictatorship here. Think of us more like the Seven Samurai. The gang of thugs (keyclowns) want to take over the village. When they are beaten off, the village needs to be given back to the villagers.

>

Oh come on Twisty. Things just look bleak to you because we pick on you so much. You are our "special" project. The reason we pick on you can be found in your own behavior. It was your own choice to act arrogant, belligerent and ignorant in this NG towards all who did not agree with you. Now you are reaping the results of those actions. Instead of owning up to it, you want to pretend you're an innocent victim.

It won't wash, Twisty.

First
name?

Do you think ONE person would have all this time? We are many. And we DEFINITELY do not want to be the "group dictator". Absolute power corrupts absolutely. That's why Doug had to go away and rest. (But if you keep calling him he might come back, that's what we were trying to tell you) No dictatorship here. Think of us more like the Seven Samurai. The gang of thugs (keyclowns) want to take over the village. When they are beaten off, the village needs to be given back to the villagers.

I can only think of two people"with all this time",Gilligan and Doug. Check the time stamps when they flood the group. Gilligan even replies to himself.

Twisted, trying to educate you is like trying to teach a drooling retard to fly the space shuttle, it's a waste of time. You don't have the intelligence to begin to understand the issues so I'm not going to bother to do so any more. Tim's mistake was thinking you knew what you where talking about. He regrets trusting your poor judgement now I'm sure.

You drool and babble on a lot but you still haven't posted any "independently verifiable evidence" to support any of your wild claims of forged posts by me. I got the goods on you cold, posted it here, and nobody disagreed with it. In fact it looked like several people wanted a piece of you hide after seeing how you lied all this time. I haven't forged any posts so it's impossible for you to produce any evidence. So here's the challenge, start producing what doesn't exist. It's either put or shut up time for you Twisted. I'm sure the group is going to be interested in seeing how you're going to get out of the hole you dug for yourself this time. If nothing else you'll provide a source of comical reading entertainment while trying, so it won't be a complete waste of your effort.

I still don't see anybody on this news group running to your rescue even now. You ticked off so many of your former supporters by blindly, and in error, accusing others of being part of a vast conspiracy that only you seem to be able to see. People are already wise to your predilection to get things thoroughly confused and don't want to have anything to do with you. You're alone, isolated, with only the demons in your mind for company.

Found this in old book from where I sent away for my license in '75:

FEDERAL COMMUNICATIONS COMMISSION FEE SCHEDULE FOR SPECIFIED SERVICES
EFFECTIVE MARCH 1, 1975 (taken from Subpart G of Part 1)

CITIZENS RADIO SERVICE..application for station
license.....$4.00

Commercial Radio Operators Applications for new operator license or
permit: First Class, second class, or third
class.....$.4.00

Restricted Radiotelephone operator
permit.....$4.00

Provisional Radiotelephone third class operator certificate with
broadcast endorsement....$2.00

Applications for renewal of operator License or permit:

first, second, and third class.....$2.00

Restricted radiotelephone operator
permit $4.00

Separate application for endorsementof license or
permit.....$2.00

Applicaion for replacement of duplicate license or
permit.....$2.00

Amateur Radio Service

Initial license, renewal, new class of operator
license.....$4.00

Modification of license without
renewal.....$3.00

Modification of license with renewal.....$4.00

Special Call sign (plus any other applicable
fee).....$25.00

Aviation Radio Service

Microwave stations (new, renewal or
assignment).....$20.00

All other applications.....$4.00

Industrial, Land Transportation and Public Safety Services

Initial license, modfication, renewal or
assignment.....$4.00

Microwave station (new, renewal or
assignment).....$20.00

Microwave station modification without
renewal.....$4.00

Microave station used in CATV systems, yearly
renewal.....$5.00

Stations using frequencies in the band 806-947 MHz and provding service
on a commercial basis--
per channel.....$200.00

I've had a lot of luck getting 757's to talk up a storm. While I like the 757 and have had one in the past, You might do better looking at a Kenwood 440 as a Gen Coverage radio. Short of prying a 7 series Drake from the cold dead fingers of its owner, you won't find a better talking radio for the money.

Source record: 85231

I still don't see anybody on this news group running to your rescue even now.

"Nor shall you. Everyone here on the ng knows I need no assistance in dealing with you and your two aliases. The subject was your inquiry about breaking the law in your housing complex to find a way to put up your cb radio antenna. Why did you change the subject?"

You ticked off so many of your former supporters

"Er, what exactly do you mean by supporters? What the hell does one need support to post in a .....oh, I get it. YOU need the validation...ok, understood. Now will you get back on the antena question?"

by blindly, and in error, accusing others of being part of a vast conspiracy that only you seem to be able to see. People are already wise to your predilection to get things thoroughly confused and don't want to have anything to do with you.

"I am in touch with everyone that I initially was on this group. Ok, now about that antenna plot you hatched to get over on the antenna police."

You're alone,

"You have eyes, but you still don't see."

isolated, with only the demons in your mind for company.

"The only demons are the ng demons like yourself that start trouble and have a temper flareup when caught and consistently try to change the issue to that of another's actions, which you have done repeatedly. Why must you change the subject? The subject is, and will remain, your attempt at circumventing rules in your apartment in trying to put up an antenna so you could receive something on your flea market radio. Did your own words concerning people who try to bend rules embarrass you? It seems you are a victim of your own hypocrisy and are having a devil of a time addressing it, just like always, you point your fat little finger, shake it and say, "Well, what about you when...." SORRY Leland! Doesn't work that way. This is about you, not I, and how you attempted to cheat Uncle Sam with his tenant rules concerning your two way radio. You posted here looking for help in getting around the rules. Your explanation, given your rants about legal cb radio and the number of times you have condemned rulebreakers, I am certain, is in way more of a demand among the ng devotees, more than anything I could possibly offer concerning your forges."

That's just too complicated for somebody like Twisted with his greatly diminished mental capacity to figure out. He just rather use smoke and mirrors to get people to believe him.

You got to get the forged post issue out of the way first Twisted. You're looking more like your old self, paranoid. So where's your evidence of my forging posts Twisted? You start making claims here then start backing them up with indisputable facts. There isn't any is there? Go read Landsharks long post. You might learn something if you can keep from drooling all over your keyboard long enough. What a putz.

I have a collection of about fifty that we're given to me dating back from
1974 -1978. I published an webpage back in '99 from S9's article on the
"Early History of CB Radio" located at http://craig328.tripod.com from one
of the magazines.

Both. I would like to go 40 down. This is going on a motorcycle. I would also like to be able to tap into the microphone element and be able to have a jack which would connect a microphone in my helmet. I wonder if anyone out there has a set of schematics for this radio.

You are absolutely correct. The anti's have exclusive rights to the
use of the subject line for the message. In fact, it never happens
anywhere else. There is NO PLACE on Usenet where ANYONE ELSE can ever
do that because the idea has been trademarked by the anti's. In fact,
your newsgroup server is REQUIRED BY LAW to delete ANY post where the
subject line contains the message, unless authored by the anti's. Even
the FCC has recognized this special privilege ... blah, blah, blah.

That's ok twist, I hear that there is a cell, ...er, room reserved at a nice hotel especially for you -- it's all padded, and they show the movie 'Old Yeller' over and over. Just make sure you don't trip over the strings hanging from the sleeves on your bathrobe. You can stay there until they clean the mushrooms out of your field. They might even let you read a book or two, but stay away from those Lyndon LaRouche books. Instead, try a book that exercises your mind, not your hand.

BTW, do you see those little arrows at the beginning of every line in the quote? Do you know what they are for?

dB means nothing by itself. Antennas are usually expressed as 'dBi',
meaning the gain over an isotropic antenna. A hertzian dipole is
typically +3dBi. A multi-element yagi or end-fire can get you up
around +15dBi, but it will be big. A parabolic array can push 26dBi,
but I can't even imagine that on 11m. Interesting thought, tho.

1256. Relay box?

Newsgroup: rec.radio.cb

Are there any commercially made relay boxes that allow the use of seperate transmitters and receivers? I'm thinking about building one, but if they are already made and cheap enough, I'll just buy one.

The noise of listening to CB channels in your helmet will drive you nuts
(pun intended). The "off" frequencies are just as noisy (besides being illegal).
VHF is a better way to go. FRS radios are cheap, reliable, use shorter antennas,
and will be kinder to your ears.

You have it hooked up wrong. But why bother with an amp? Using it will make you unpopular and lessen others enjoyment of the band. You don't need an amp on CB anyway. Why not impress everyone and erect a wire beam instead?

1272. Twisty-Buster order delay...

Then again, it's a simple matter to connect any transceiver to an external
T/R switch mounted on the handgrip of the bike. You won't need a schematic
for this. Just carefully bridge pairs of pins on the mike jack with a screwdriver
to find which two control T/R and run a cable from there to the switch.

1281. Re: Cobra 75 wxst?

Motorcycle mounted radio has its own special issues, but the idea of using a bike intercom to feed a transciever has some merit. Both T/R and audio would need to be routed and switched thru the intercom. Not impossible.

Back when this was standard practice a company called Dow-Key made them.
They show up at hamfests but tend to be a little pricey these days. They
never were cheap.

When you are switching rf it helps if the contacts are remote from the
armature and all the clattering stuff. The best source I ever ran into was
old pinball machines.

Hello Neon Homer:

Look at the Motorola RF Transistor manual for diagrams.

It sounds like the transistors and or relay is bad.

Have a great day.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Very interesting gizmo, but I don't think a coaxial relay is needed
for just a few watts. I was thinking along the lines of a simple
relay, or perhaps a couple pin diodes. I want to be able to use the CB
while my SW is going without keying right into the receiver. I did a
couple searches and didn't find anything that wasn't homemade, so I
think that is the way to go here.

That coaxial job might make a unique paperweight. Polish it up real
nice, maybe get it plated...

If all you want to switch is 4 watts then look at the cheap relays at Radio Shack. At H.F. frequencies the relay will not cause much of an impedance bump as long as you keep the leads short. Take a look at the reed relay which has closely spaced contacts and the current drain will be around 12 ma at 12 VDC. Get a couple of those, a piece of vector board, a cheap diode like a 1N4004 to strap across each relay coil, 3 SO-239 sockets, metal utility box, some wire, and a switch if need.

If you don't like the idea of building one, then check out RF Parts and get the CX-600M(UHF) coax relay ($85), a diode, and a switch, then you're done.

http://www.rfparts.com/ (Look under "Relay" / "Coax")

This is a SPDT coax switch. You can click on the left side, on the above web page, for the above part number to view the complete data sheet if you want more details.

Depending on what your time is worth to you I think the part cost and time to build v.s. buy solution is about even.

In my case it's just your opinion that I'm trolling. Of course if the illegal operators don't like being signled out as bad examples they have the option to clean up their act.

> Nobody on the group takes any of you serious anymore, so you took to agitating.

Which is precisly what you did for a long time with your wild claims of post forging by everybody you laid eyes on. Even your fellow CBers on the news group told you in plain language to knock it off, but you persisted anyway.

> cuss on the air, dead key, harass
> people, play music,, don't ask for breaks, etc.

That's a great discription of CB Radio any day of the week Twisted. So that's the kind of on-the-air conduct you stick for here? That's a real change. You opened your mouth in that article you wrote and said even worse things about CB operators.

http://sporadic1.tripod.com/page7.html

> I believe the way you 3
> conduct yourself here is almost parallel to the way you conduct
> yourselves on the air, in fact, I am quite certain of it.

I could of course use your logic above to conclude that you are a drooling mentally challenged nut-case off the news group too, based on your conduct here.

1301. FS:BIRD 43 RF Thruline Wattmeter w/ 3 slugs

Newsgroup: rec.radio.cb
Date: 2001-06-13 15:44:09 UTC
From: RFGun@webtv.net
Message-ID: <11410-3B278A49-19@storefull-232.iap.bryant.webtv.net>
Source record: 85291

I have a Bird Model 43 RF Thruline Wattmeter w/3 slugs
50 watt (100-250MHz)
100 watts (2-30MHz)
1000 watts (2-30MHz)
This meter is almost new in appearance and looks to have been used very little or stuck on a closet for most of its life. I have the manual and its also in great condition.
I will let the meter go and all three slugs for $300.00
After looking at AES and HRO this seems to be a fair price and the norm on Ebay.

1302. Hey Antikeyclones

Newsgroup: rec.radio.cb

Just received my latest copy of the Burghardt Amateur Radio catalog
http://www.burghardt-amateur.com and on page 19, they are selling
a Henry 5K Classic amplifier! Let's see...that's about 3500 watts
ABOVE the legal-limit for hams. BAD Elmers...BAD,BAD Elmers!
Sick 'em...

1303. Antenna question

Newsgroup: rec.radio.cb
Date: 2001-06-13 17:47:20 UTC
From: Henry County American Red Cross <arcweb@bnnorth.net>
Message-ID: <tKNV6.4774$Bo2.218014@cletus.bright.net>
Source record: 85294

I am looking at building dipole antennas for my home base, my question is this. I know that a dipole is directional, so if I want to go more than one direction do I need multiple dipoles and a switch box? And if I do this do they need to be the normal wave length apart so as to not resonate and conflict with the radiating patern? I am trying to get by with something I can place in the attic of my house, the wind storms here have taken out 2 towers this year and this is getting expensive.

These guys that create these virii can attatch a virus to a simple jpg or mp3 file as well. I have worked with several internet anti-virii task forces for years and have seen countless of these type, they are rather simple codes but it does and can happen.

I made it back alive (barely) the party/dance on saturday night after the classes was a blast drank a cubic butt ton (polite way of saying a whole sh*tload to your commanding officer/boss) of b33r. Now I am home and am on alert for deployment to the flooded areas in Texas and Louisiana.

REACT has expanded beyond just CB communications, teams now use GMRS, FRS, Amateur, as well as CB for comminications, we strongly encourage all our members/teams to obey the rules and regulations set forth by the governemt. Especially as we often support the local governments in emergency situations, such as the flooding where I will most likely be heading. Here locally our team supplies the backup emergency communications for the local EMA, Red Cross, we also work with SKYWARN. So we have to be flexible, and we also try to have some fun. I travel Ohio alot, and I always enjoy meeting people for a coffee and to trade radio "war" stories.

Have fun everyone, and I am glad to see that some of the nonsense has settled down while I was out of town.

Don't harass the man for asking a legit question in the proper forum....I doubt many "Hams" in the ham group know much about this FCC approved Citizens Band radio.....Anyway, Yes, there are mods out there if you do an inernet search that will take the radio up to about 27.9 or so by wiring a couple of switches...In order to get the radio up to 10M you will also need to install the "Viagra board" , witch, when installed will normally give the radio 120ch, but when used in conjunction with the "switches mod" it will get youinto the lower CW & voice portions of 10M

That particular argument ran its course in here long ago and guess what?
Your side lost again. Transmitting tubes and RF tuner components in particular
are rated at WAY above their actual in-use output. MFJ sells 3KW tuners.
Does that mean that hams run 3KW? (Only if you are a dumbass like Jay in
The Mojave, perhaps)

In practice, dipoles are more forgiving about direction than you might expect.
If you want omnidirectionality, mount the dipole as an inverted vee "under
the eaves", or vertically.

> Don't harass the man for asking a legit question in the proper forum....

It is in fact NOT the proper forum. CBers are not allowed to "mod" radios
for additional frequency coverage - so why would hams go looking in a CB
NG for such information?

>I
>doubt many "Hams" in the ham group know much about this FCC approved Citizens
>Band radio.....

Again, proving that the CB newsgroup is not the proper forum for dissemination
of such info. But it's becoming rather clear that you knew that already.

>Anyway, Yes, there are mods out there if you do an inernet
>search that will take the radio up to about 27.9 or so by wiring a couple
of
>switches...

Thes mods are illegal.

>In order to get the radio up to 10M you will also need to install
>the "Viagra board" ,

Why do CBers need to get on 10 meters?

>witch, when installed will normally give the radio 120ch,
> but when used in conjunction with the "switches mod" it will get youinto
the
>lower CW & voice portions of 10M

You obviously are not concerned with disseminating mods that enable CBers
to transmit on 10 meters. What kind of a ham are you? Never mind, you've
made the answer to that question CRYSTAL clear.

For good reason, Tim. They are usually posted by people with names like "mauldropper" and "worldwide".

According to you, there are hundreds of hams running 3KW.

Can you provide us with the callsign of just ONE of these "3KW stations"
so we can verify, Tim?

Some muting schemes simply interrupt the B+ coming off the voltage regulator
of the receiver, but there is likely a better way.

1327. Report this: DATING MY DAUGHTER.....

Newsgroup: rec.radio.cb
Date: 2001-06-13 21:44:35 UTC
From: "Scott (Unit 69)" <upplus@hotmail.com>
Message-ID: <3B27DEC3.9AC4765@hotmail.com>

Rules for dating my daughter (from a father's point)

Rule One: If you pull into my driveway and honk you'd better be delivering a package, because you're sure not picking anything up.

Rule Two: You do not touch my daughter in front of me. You may glance at her, so long as you do not peer at anything below her neck. If you cannot keep your eyes or hands off of my daughter's body, I will remove them.

Rule Three: I am aware that it is considered fashionable for boys of your age to wear their trousers so loosely that they appear to be falling off their hips. Please don't take this as an insult, but you and all of your friends are complete idiots. Still, I want to be fair and open minded about this issue, so I propose this compromise:

"You may come to the door with your underwear showing and your pants ten sizes too big, and I will not object. However, In order to ensure that your clothes do not, in fact, come off during the course of your date with my daughter, I will take my electric nail gun and fasten your trousers securely in place to your waist."

Rule Four: I'm sure you've been told that in today's world, sex without utilizing a "barrier method" of some kind can kill you. Let me elaborate: when it comes to sex, I am the barrier, and I will kill you.

Rule Five: In order for us to get to know each other, we should talk about sports, politics, and other issues of the day. Please do not do this. The only information I require from you is an indication of when you expect to have my daughter safely back at my house, and the only word I need from you on this subject is "early."

Rule Six: I have no doubt you are a popular fellow, with many opportunities to date other girls. This is fine with me as long as it is okay with my daughter. Otherwise, once you have gone out with my little girl, you will continue to date no one but her until she is finished with you. If you make her cry, I will make you cry.

Rule Seven: As you stand in my front hallway, waiting for my daughter to appear, and more than an hour goes by, do not sigh and fidget. If you want to be on time for the movie, you should not be dating. My daughter is putting on her makeup, a process that can take longer than painting the Golden Gate Bridge. Instead of just standing there, why don't you do something useful, like changing the oil in my car?

Rule Eight: The following places are not appropriate for a date with my daughter:
o Places where there are beds, sofas, or anything softer than a wooden stool.

o Places where there are no parents, policemen, or nuns within eyesight.
o Places where there is darkness.
o Places where there is dancing, holding hands, or happiness.
o Places where the ambient temperature is warm enough to induce my daughter to wear shorts, tank tops, midriff T-shirts, or anything other than overalls, a sweater, and a goose down parka zipped up to her throat.
o Movies with a strong romantic or sexual theme are to be avoided; movies which feature chain saws are okay.
o Hockey games are okay.
o Old folks homes are better.

Rule Nine: Do not lie to me. I may appear to be a potbellied, balding, middle-aged, dimwitted has-been. But on issues relating to my daughter, I am the all-knowing, merciless God of your universe. If I ask you where you are going and with whom, you have one chance to tell me the truth, the whole truth and nothing but the truth. I have a shotgun, a shovel, and five acres behind the house. Do not trifle with me.

Rule Ten: Be afraid. Be very afraid. It takes very little for me to mistake the sound of your car in the driveway for a chopper coming in over a rice paddy outside of Hanoi. When my Agent Orange starts acting up, the voices in my head frequently tell me to clean the guns as I wait for you to bring my daughter home. As soon as you pull into the driveway you should exit your car with both hands in plain sight. Speak the perimeter password, announce in a clear voice that you have brought my daughter home safely and early, then return to your car. There is no need for you to come inside. The camouflaged face at the window is mine.

Until you get a whole lot higher than yours will be, directivity is not that huge a factor. If you want to see crossed dipoles, the Radio Scrap FM antenna and a number of others when Muzak was done on a subcarrier are good examples.

With attic antennas you come face-to-face with the fact that the input impedence of the Universe is 377 ohms. What this means is that for the first couple of feet of the dipole you have one hellacious magnetic near field that can couple to every roofing nail in the place. It also makes it a bit of a bitch to run the coax at right angles far enough to avoid making the coax part of the system. This coupling to everything in sight (you will see it when you have to trim a foot off to get to resonance - thats each side) lowers the feedpoint impedence, makes the antenna very broad (50 ohm resistors are broad, efficient antennas generally are not) and keeps the snow melted in the winter time. As a practical matter, plan on 35-40 ohms - if that, not the 72 from the book.

Were it me, I would use a folded dipole and a coax balun (half-wave of coax including the velocity factor). By dividing the current you reduce the magnetic field, get the bandwidth naturally, and probably manage to keep the stray coax currents to a gentle ladylike belch. Assuming anyone in the world still sells TV ribbon feedline, it is an admirable material to build the dipole out of.

It will work but not as well as one outside.

Next time you put up a tower, use some concrete :-)

Actually, no. Unless you had some reason to do it, there is no good reason
why an amateur should know a dx959 from a passing ice cream truck.

install the viagra board, and the switch mod, then replace the loop mixer crystal with one of a higher frequency (depending on desired coverage), retune the transmitter and receiver, and have fun.

Here we go again. No, he has no special privleges using a modified rig ON
CB or any other freq not authorized to an amateur.

But he has every right to modify equipment to operate in the ham bands.
There is no type-acceptance or any other blessing required for amateur
frequencies. Type-acceptance creates a permissive use for the frequencies
intended; it does not create a holy shrine.

I have personally modded a Browning LTD for ten meter usage, an old 2 MHz
Marine transmitter for 160 AM, and a GE law-enforcement repeater for 2 meter
use. Monty's use is perfectly legal, moral, and non-fattening.

I once had a bad case of grubs on a south-facing slope in WI. Watching the robins feast on the grubs and reading the label on Diazinon made the decision easy. Robins and grubs got to eat too. There are some more important things than radio and lawns.

Look at the bright side: at least you did not have a house bracket. :-)

Dick

Thx for your input

Heh I did use concrete, the problem is the tower getting twisted like a stinking pretzel, or tree limbs taking it out. Yeah I know, cut down the tree, only problem is, my dipole for my shortwave reciever is strung to the tree, and the tree is old, I have cut down too many trees here already.

I liked that reed relay idea enough to give it a try, and I discovered
something interesting. There is a lot of capacitive coupling across
the contacts. Reed relays (and switches) don't have much gap when they
are open, so I tried a couple standard relays with larger gaps and the
problem went away. That's an effect I never thought to look at before,
and now that I think about it, a lot of relays have long armatures
that run parallel with each other: there should be a small amount of
inductive coupling as well. I wonder how many radios get cooked
because of amps with cheap relays....

>If you don't like the idea of building one, then check out RF Parts and get
>the CX-600M(UHF) coax relay ($85), a diode, and a switch, then you're done.

I'm not about to shell out 85 bucks for something that will just
amount to overkill. I have some very good relays from old tube-type
mobiles, I think they will work just fine.

Oh man, I put my first base antenna on the roof. The first year it got hit by lightning, the second year it got blown off, the third year it got hit by lightning again, etc. So I took it down and got myself a tower. It could handle the lightning and wind fine, even a small tornado. So mother nature, not to be outdone, sent down an ice storm. The tower came down, a tree landed on top of it, and power lines were thrown on top like tinsel. Now I just put up the cheapest thing I can find and she leaves me alone.

Hello Dick: Good one! Thats the way to sink the goof ball in the corner pocket.

Use to buy the old marine AM radios 2 to 6 MHz, 25, 50, and when you could find them 100 watt marine radios like Karr, and a few other radio manufactures. They use to make CB Radios also, if one had the diagrams and a little work, the CB radios could be converted over to the 25 or 50 watt versions very easily. And sounded great, if you could keep the audio levels down.

But the neatest thing these radios had on them was a dial with the AM Broadcast Band on them that used a separate antenna, (usually just a long wire wire antenna) and even a few with the FM Broadcast Band on them. Most guys would would turn up the squelch for the CB Band, and listen in on the radio, it made the radio very pleasant to use.

In 1967 to 1970 I worked on my Dads fishing boat, that had a old Raytheon Model 60A, two 807's plated modulating another pair of 807's in class C, it sounded great. The Raytheon Model 60A had a insulator mounted at the radios top left corner, everyone use to place their left arm on the radio, because it was warm, and mounted next to a window in the wheel house, the left arm would get a RF burn from the antennas insulator feedthru connection, I still have a few nasty scares. Ah the memories.... of burnt flesh, and the old man cussing at the radio.

Whereas: many "CB" radios currently on the market are designed to be easily modded to expand their frequency rage.

Whereas: these easily-expanded frequency coverage CB radios are designed to appeal to illegal CBers and not amateurs.

Whereas: it is not uncommon for illegal freeband CBers to obtain a ham ticket with every intention of remaining an illegal freeband CBer.

Conclusion: a 'ham' seeking advice in a CB newsgroup about how to mod radios for expanded coverage will very likely be using said radio on freeband.

(Next time we hear a roger beep on 28.085 we'll think of you, Dick)

Date: 2001-06-14 01:41:03 UTC
From: ericsradio@aol.com
Message-ID: <20010613214103.28067.00001672@ng-md1.aol.com>
Source record: 85439

Prozac, I was just wondering. Wasn't that you on this same newsgroup say around a year or so that posted pics of you holding that big 32 pill davemade? And also didn't feature the DaveMade products on your web site WWW.BAYSHORENETWORK.COM And didn't you also say that you lived at home with your parents. I thought that I read that you made open statements about anyone coming to Jersey for a keydown with you and that "they" should bring money because "You" would be the man to beat.

Things that make you go hmmmmmm

1351. Re: Report this: DATING MY DAUGHTER.....

I thought it was a great post. I heard Charlie Sykes read it on 620 WTMJ out of Milwaukee. And to tell you the truth I think this newsgroup is not the ISP's newsgroup, not the "ANTI'S" newsgroup, but its the CBers newsgroup. I saw post all you want. I'll go by what the antikeyclow people say...if you don't like it, don't read it.

Which makes Prozac the perfect informant. You couldn't ask for better. The guy knows EVERYTHING. Names, places, who's connected to who, etc. No wonder Frank Nitti.....er, Pinhead...was sent to try and scare him off. We have to give Prozac credit, he's got balls.

We don't blame you guys for being on the offensive (or is it simply being offensive?). After all, your whole little illegal CB world is coming crashing down around you. Interest in your brand of CB is declining. No one likes to hear

channel masters either on air or off. Your rude antisocial beahvior is beginning

to be seen for exactly what it is. Now your gangster talk falls on decidedly deaf ears. You're just a bunch of chest-beating clowns desperately trying to make noise that no one pays attention to. B

It is in fact NOT the proper forum. CBers are not allowed to "mod" radios for additional frequency coverage - so why would hams go looking in a CB NG for such information?

>I
>doubt many "Hams" in the ham group know much about this FCC approved Citizens
>Band radio.....

Again, proving that the CB newsgroup is not the proper forum for dissemination
of such info. But it's becoming rather clear that you knew that already.

>Anyway, Yes, there are mods out there if you do an inernet
>search that will take the radio up to about 27.9 or so by wiring a couple of
>switches...

Thes mods are illegal.

>In order to get the radio up to 10M you will also need to install
>the "Viagra board" ,

Why do CBers need to get on 10 meters?

>witch, when installed will normally give the radio 120ch,
> but when used in conjunction with the "switches mod" it will get youinto the
>lower CW & voice portions of 10M

You obviously are not concerned with disseminating mods that enable CBers to transmit on 10 meters. What kind of a ham are you? Never mind, you've made the answer to that question CRYSTAL clear.

1363. Hey AntiKeyClones

Newsgroup: rec.radio.cb

Message-ID: <poVV6.7765$pb1.299642@www.newsranger.com>
Source record: 85450

In light of your 'groups' one-dimentional (cb'ers only) attacks, let's take this time to do a little comparison between hams and cb'ers.

1. Both at times run excessive power.
2. Both at times use profanity.
3. Both at times splatter on the neighbors.
4. Both at times use modified equipment.
5. Both at times use illegal frequencies.
6. Both at times transmit music, ect. over the radio.
7. Both at times overpower legal operators.
8. Only ONE kerchunks repeaters.
9. Only ONE spews hate and racism on the 'Liberty Net.' (3950 KHz)
10. Only ONE transmits Pirate shortwave broadcasts on 6955 KHz

You see...hams and cb'ers are actually ALOT alike. They BOTH use radios for a hobby. The only real difference is that the ham operator has a license, and the CB'er does not need one. So with this in mind, I trust you fellas will sashay over to rec.radio.swap and commence your silly barrage on the 'illegal' ham operators there too. What's illegal, is illegal...ham or CB. I'll be waiting with baited-breath for your whimsical responses.

"Must have really upset you to go through all that trouble to try and stir trouble up in a hammie forum under my name. Why am I so important to you that you would go out of your way? Well, you shouldn't have been so hypocritical. When people have a legitimate question about cb radio, you shouldn't call them criminals and tell them that if they break a

rule they are criminal minded when you have posted here seeking help in breaking Uncle Sam's law regarding your HUD housing complex just so you can have an antenna for your cb no code fun. Those rules are there for everyone, you aren't special. How can you fix cb's when you are busy playing forging games?"

Given the fact that 10 and 12 meters are increasingly the target of unlicensed intruders and Monty's Advanced Class notwithstanding, his judgement is exceedingly poor if he feels that soliciting info about CB radio out-of-band mods on

a CB newsgroup contributes in any way to the overall good of the hobby.

If by 'one-dimensional' you mean that we oppose illegal CB, then YOU ARE CORRECT. Many self-proclaimed illegal CBers hold ham tickets. We oppose them, too. Ask Bill Eitner if we give him shit. Or any of the other pussies who claim to be hams but ae afraid to give their calls.

Percentages are against you, my man. Lot more shit on CB. A *LOT* more. But even

IF ham and CB contained equal amounts of offenders -- how would that give you the right to operate illegal CB? The fact that someone else is being an asshole gives YOU an excuse to be an asshole? No.

Either you are truly weak-minded person and easily led astray or you honesly believe the typical lame-ass jailbird excuses for being a pirate CBer.

>

Here's a question for ya: how come ham newsgroups are totally lacking in info/discussions regarding illegal power, mods, frequencies, etc.....but the CB group is chock full of such stuff? Kind of knocks a hole in your theory don't it.

>So with this in mind, I trust you fellas will sashay over to

What about the HAMs asking about modifications to their rigs for the
WARC or MARS bands? Do you honestly think they're asking simply so they
can transmit on those bands?

What about the two HAMs with US callsigns I heard the other day
transmitting on 14.530?

Illegal HAM operators do exist, and they do chat about illegal mods to
their rigs, and some of them do operate at power levels that exceed the
FCC's rules...

Ok, here's mine:

Let's compare CB radio operators to

1. Both at times talk.
2. Both at times sleep.
3. Both at times eat.
4. Both at times have sex.
5. Both at times bathe.
6. Both at times dig holes.
7. Both at times drive cars.
8. Both at times defecate.
9. Both at times make endless lists to prove a point.

Well then, let's open this newsgroup for any and all activities in
which a CBer can possibly partake! Let's talk about birdfeeders!
Whaddya say?

So where are they using ALL these modded rigs? How come there aren't thousannds of "out of band" QSO's happening all over the spectrum? Where are they operating???

What you can't grasp is that the average ham has TONS of frequencies to operate on. He has no need to move onto unauthorized frequencies just for the "thrill" of breaking the law.

>
>What about the two HAMs with US callsigns I heard the other day

They would be pretty stupid hams - with all that free spectrum - to go outside of the band AND use their callsigns too.

>Illegal HAM operators do exist, and they do chat about illegal mods to
>their rigs, and some of them do operate at power levels that exceed the
>FCC's rules...

Yes but HOW WOULD THAT JUSTIFY YOU OPERATING ILLEGAL CB? (Answer: It doesn't)

Thanks Dave, that brings up an interesting question: Which is better,
PLLs or crystals? And don't forget that a PLL is not crystal-free, it
still needs one on the reference oscillator.

I think I'll take the position that PLLs are better only when the
number of freqs makes individual crystals impractical. But for just a
single freq, nothing beats a good rock.

Decent stuff. Legalities aside, you should get a license and open it
up. It should purr on 80m.

> It's really a cool old rig,nock on wood the tubes arestill available too..

Look around on the net and you will find that almost all tubes since
the 1920's are still available in working condition.

What antenna are you using?

....Wouldn't be too surprised if the callsigns heard were indeed legitimate.
MARS callsigns are pretty close to sounding like amateur calls... just an
added letter.

I didn't know they had one. But if it is like any other 'instant-on',
what it does is keep the tubes hot. That can suck some juice, and will
shorten the life of the tubes if used constantly. The same problem
happened with all those 'instant-on' TV's. Probably shouldn't use it
unless you need it.

How in hell would you know about 12 meters?

You do not supress knowlege, not now not ever. To try is right up there with pissing up ropes and pounding sand down a rat hole. Similar information is available at the touch of a search engine. The LTD mod I mentioned came right out of an amateur magazine. There are kits available to do CW thru modded CB rigs; I strongly doubt that came from the brain of an outlaw CBer.

If I could spell it I would call you a Radio-Pharisee.

There was a spate of conversions when Antique Modulation was outlawed I
believe about 1972. The Amateur Service makes its leaps forward when some
first-rate junque becomes available; repeaters etc date from the narrowing
of commercial FM channels and the availability of a lot of decent Motorola
etc gear. Hell, even the CW practice from W1AW is done on modified
commercial gear. Key an audio tone thru an SSB transmitter.

The fishing boats today have about every freq from 135 to 175 in use; the HF
we won't talk about. For this pisant to think he is going to have any
effect on much of anything is laughable. You just try to keep the carnage
to a gentle, ladylike belch.

I do, but I don't suspect that he is going to be home while I am on vacation. He is a pussy, and will probably be hiding on the lake.

> If you don't mind, I'm curious what the goal is in Cleveland. Are you
>looking to get him a pink slip? As you know, the FCC is notoriously lax about
>CB except in extreme cases.

Pink slip? Nothing so trivial. My only plan (right now) is to take his picture through the scope of my best rifle. There is so much satisfaction in knowing what I -could- do but don't. Like I said, I have an interesting photo album. If half these people knew that their lives were once dependant upon my control of my index finger, perhaps they wouldn't be so fucking arrogant. I figure that people will eventually get what they deserve, so I let fate take it's course.

It's a personal matter. When some dipshit can't think deep enough that he fucks up something that has more importance to me than he has for his own dick, his ass is mine to do with what I will. My will is not to pass judgment, but to know that I can if I so choose is my ownly justification. And nobody, NOBODY, can take that away from me.

So what do you think? Crystal or PLL?

Frank "Gilligan" Gilliland
==========
That's right, I got you pegged. It's called 'skip-tracing', and I got twistie in the same way. It helps when your best friend in high school is now a big-wig at microsquash. You are a fucking nobody, but somehow you are able to make your odor noticable in places that you shouldn't even poke your nose. And all because of your big fucking mouth. Well moped, say goodbye to both. You fucked with the wrong person this time. You can either come clean or you can wait till I come back from my 'vacation' so I can humiliate you to the point of suicide. Do I care if you kill yourself? Fuck no! People like you should not even breed.

Yeah, moped, you pushed the limits and now it's time to pay the piper. And you won't even know I'm there. What a fucking laugh! You with your big fucking mouth bragging about how you are going to "beat me like a red-headed stepchild" but you don't even have a clue as to the abilitiy or determination of the person you just fucked over.

You are the biggest fucking hypocrite in the conus. But not for long. Yeah, complain to my ISP, I'll just find another one when I get back. And that still doesn't negate the facts: I'll be there, and you can't do shit about it. That's power, regardless of how many watts that leak out your antenna. Kiss your Collins goodbye.

> What about the two HAMs with US callsigns I heard the other day
> transmitting on 14.530?
==========
Bullshit, why would any ham risk his license to transmit out of band and yet
be so close to the edge of 20 meters. There is no reason for them to
transmit on 14.530 and the best part why would they use there call signs.
Thats what make your point Invalid.

==========
This is a cb NG Why should hams be attacked here , other than Eitner, toll
free, dick, and other illegal Keyclowns. Go to rec.amatuer.radio and start a
thread over there. This is a CB NG.
>
> 1. Both at times run excessive power.

And your proof is? Do they have keydowns like the Cbers?
Where known Illegal Hi-power cb's are?

> 2. Both at times use profanity.
==========
Yes, so does the 12 year old out on the corner. Your point? Turn on your Cb
it is far worse than any ham band.That is fact1

> 3. Both at times splatter on the neighbors.
==========
Yes and a ham is responsible for his actions, he must help eliminate the
problem.. Cbers just act like the problem isnt there or therre not causing
it.

> 4. Both at times use modified equipment.
==========
Legal for hams, Illegal for Cbers. try again.

> 5. Both at times use illegal frequencies.
==========
Again highly doubtful on the hams part they have so much bandwidth, and
legal freqs they don't need to freeband, unless of course you consider guys
like Bill Eitner a ham, I consider him a pirate who happens to hold a ham
callsign. he is not a ham but a Cber. Another unfounded accusation. But for
real facts Listen to 27.555 many illegal freeband pirates there. That is
fact not fiction.

> 6. Both at times transmit music, ect. over the radio.
==========
Again How do you know who is playing the music, perhaps it is an illegal
cber on the Ham bands playing the music.

> 7. Both at times overpower legal operators.
==========
What proof of this do you have? If you are talking on a dipole and I am on a

4 element tri bander, I guess I will overpower you.

> 8. Only ONE kerchunks repeaters.
> 9. Only ONE spews hate and racism on the 'Liberty Net.' (3950 KHz)
> 10. Only ONE transmits Pirate shortwave broadcasts on 6955 KHz
>
> You see...hams and cb'ers are actually ALOT alike. They BOTH
> use radios for a hobby. The only real difference is that the
> ham operator has a license, and the CB'er does not need one.
==========
The similarity is they both talk on the radio, many cbers are hams perhaps these are the same ones causing the ptroblems on the ham bands. Look at Eitner, Toll Free, etc, all admitted hi power freaks who also carry a ham callsign You are right they are alike because they wear both hats as a Cber and a Ham. Why don't you sashay over to Landsharks house with your limp wrist.

news:3B282C4F.7766817D@spam.me.not...
>
> What about the two HAMs with US callsigns I heard the other day
> transmitting on 14.530?

The other possibilities are the callsigns you heard are, number one faked, or number two they are bootleggers using somebody's valid Ham call and may (or may not) know enough about the band to realize they are outside of the band a bit, and third they could be using old so-called "boat anchors" and don't realize the frequency dial calibration is off. The last one is not an excuse for not checking before using the equipment on the air.

The second one above was proposed at one time or another by some of the CBers on this news group to "punish" Hams who voice opposing opinions here about what they think of illegal 11m operators. The idea was to get them noticed by the FCC thereby causing them some trouble to convince them to get off the news group. Given the fact that a significant number of illegal CBers used modified Ham gear to do their thing, all that would be require is hanging a dipole up, and then spinning the VFO knob.

> Illegal HAM operators do exist,

> and some of them do operate at power levels that exceed the
> FCC's rules...

Of course that's true too. The main difference between Ham and CB is most Hams don't put up with this kind of behavior. We have been asking for the FCC to enforce Part 97 rules so now they are doing so. That's also why we have so little of it occurring percentage wise as compared to CB Radio. What you don't see here are OTHER CBers calling for the illegal operators to knock it off nor for enforcing Part 95. Now you know why this group has the character it does.

> and they do chat about illegal mods to their rigs,

That's a common misperception. Hams can do just about anything we want to our rigs so long as we observe Part 97. So a rig modified to go out of band is still legal so long as it is NOT USED TO TRANSMIT OUT OF BAND ON THE AIR. As long as it is used "in band" the FCC could care less about it. In fact if you bother to ask them they will tell you the same thing I did above. Also many of the mods Hams ask for are used for nothing more then to extend the receive range of their rigs. The expanded transmit range you get with some of the mods are of no interest.

As a matter of fact performing mods to go out of band has a legitimate use. For example somebody who wants to use their very expensive H.F. rigs on the

V/UHF Microwave bands will use a transverter. Lets use the 2m band as the example. The typical transverter converts between the 10m band to the 2m band. The 2m band extends from 144 to 148 MHz, a 4 MHz wide band. The 10m band is 28.0 to 29.7 MHz, a 1.9 MHz wide band. Without crystal swapping in the transverter local oscillator for the mixer the only other choice is to go out of band on 10m to cover the full range on 2m. So long as NONE of the 10m RF gets on the air the practice is very legal.

What typicaly happens is the amplifier gets "hot switched" which will burn up the relay contacts after a while. Then you could be screwed becaused it maybe was a weird or custom manufactured one which you can't get any more. If there is a amplifier keying line it should be used.

> I'm not about to shell out 85 bucks for something that will just

> unless you need it.

What kills a tube filament is the mechanical shock of the filament moving due to the magnetic force from the high surge current until the filament heats up. The cold filament current can be several times that of the filament at it's normal working temperature. Also cold filaments are rather brittle too. Some of the high power liquid cooled tubes I have worked with are shipped in a cradle suspended on rubber cords inside of the main shipping container. The tubes have to be shipped up right other wise the filaments might break and short to the grid. Think about it for a minute. When do you see light bulbs fail most often? At the instant of turn on. Tube filaments are no different.

The problem with leaving the tube filament on is the filament has a limited electron emission life time. After a period of time the amount of electrons that can be produced declines. When that happens the tube can no long conduct rated plate current and needs to be replaced.

So depending on how you operate the equipment one method or the other may result in extending the tube's useful life time. Take your pick.

I haven't operated a CB in over 20 years. I just can't believe somebody like you Twisted, could be so brain dead asleep at their keyboard for that long, and now just woke up. Hey Twisted, living in the past is a clear sign of dementia. Gee, not only are you drooling all over your keyboard, you don't even know what year it is. Try wiping some of the drool off your TV screen so you can read the date at least, and don't try to blame your gaff on Micro$oft either.Your getting more confused by the minute. Soon you'll start forging posts and answering them, forgetting you forged them to begin with. What a putz. 8-))

Good point.

Hey my brother and I saw Phil at the Grand Rapids swap. Seems like the USECA group is fixing to do another balloon launch. Any details yet? My brother and I would like to take another stab at getting better video from the instrument package this time around.

I know you mentioned something about a World Radio magazine that had something I might find interesting a while back, but I could not find a copy anywhere to look at. What did I miss?

Technically, neither has Twisty. The "freeband" isn't CB (and it isn't free).
Since Twisty is a pirate, his presence in a CB radio newsgroup is inappropriate.

Go away Twisty. No, on second thought, stay. We need a punching bag.

Since typical "keyclown" methodology calls for running tubes at constant
maximum output, they won't last very long in any case :)

I always wanted to know who was buying all those crappy Chinese tubes. You
know the ones that use carbonized bamboo filaments and come with a 30 second
money back guarantee. 8-))

Leland C. Scott" <no-spam@junk-mail.net> Group: rec.radio.cb Subject: Re: Weekend CB update with Twisty (Undoing the mess by Sparky andCo.) Date: Tue, Jun 12, 2001, 10:57am Organization: Posted via Supernews, http://www.supernews.com X-Priority: 3 X-MSMail-Priority: Normal X-Complaints-To: newsabuse@supernews

"Twistedhed" <twistedhed@webtv.net> wrote in message news:10360-3B254DFB-176@storefull-128.iap.bryant.webtv.net... "As you refused to listen. You even attacked another hammie and quickly attempted to change the subject that you still can't answer after 3 months. How can a computer grad, such as yourself, not tell a webtvers post from a forged one?"

Leland dribbled: I never bothered to look because I don't see the point in forging posts anyway so it didn't cross my mind at the time. If it looks like you, squeaks like you, and signs your name to it, well you got the blame.

" Gee, I Guess that makes you a.....what was your term, oh yea, a PUTZ! Does the above in anyway resemble MIBX? I guess it may to one who has to constantly claim they have a degree in computer science. The only gaff is you being exposed, again. Why do you respond to forges of me in the hammie forums? Answer: You are a troll perpetuating the forge. Here's another... you also said mods are for criminals and once a criminal always a criminal.
What does the time have to with it? You made the claim you post from supernews at work and from mediaone at home. Do you rotate all three shifts? Domestic control."

From: Leland C. Scott (no-spam@junk-mail.net)
Subject: RadioShack Family Radio Service Radios Mod's?
Newsgroups: rec.radio.amateur.homebrew
(This is the only article in this thread)Date: 1998/12/24 Does anyone know of any mod's for the RadioShack line of cheap FRS radios to convert them for use on the Ham bands? Leland C. Scott
KC8LDO

"Oh, so you haven't operated a cb in years? Were you on cb when you made the above post? Why are you even here if you have no interest in cb? Be very careful in your wording here, Leland, as you can see, your words are always your downfall. Well, you may not have played with FRS radios in awhile either, but what does that prove? In a matter of a few posts, I have showed your lies concerning your hypocrisy, your alleged concern for legal radio (which is a ruse to troll and play identity games), your intentional response to forges, and your deliberate attempt at

circumventing zoning laws in order to satisfy your own indulgence. And once again, you did it to yourself. Now stop trying to play with me, swallow your pride for being caught again, get over and go amuse yourself, and have a good evening."

As you can see from Twisted's silly comment below in the thread he's still out to lunch. I have run in to his type before. It doesn't make a bit of difference what the facts are. The only thing that matters is grinding their axe. In Twisted's case he's short one axe handle, and no clue where to find one either. The worst damage he can do is drop it on his foot and look like a fool once again. If you think you're going to educate him otherwise, forget it, you're wasting your time. You may as well sit back and enjoy his clown act since he like performing so much. When he finally succeeds in convincing everybody that he's a for real chuckle-head he just might knock it off for a while like last time.

STAN YOU HAVE GOT TO BE THE DUMBEST PERSON I HAVE SEEN
NEXT TO PAUL MR. BIRDMAN ANOTHER ONE OF COONDOGS PUPPET ON A STRING.
YOU JUST DON'T NO ALL THE REAL FACTS.
BUT IF YOU WANT TO LISTEN TO MR.COON DOG THEN YOU ARE JUST AS BAD AS
HE.
AND AS FAR AS YOU THINK YOU ARE GOING TO RUN ME OFF THIS NEWSGROUP OR
ANYOTHER YOU AND COONDOG ARE WAY OUT ON A LIMB.
BECAUSE ASS WIPE I AM ON THIS NEWSGROUP EVERY DAY OF THE WEEK
AND TWO OTHERS. AND BY THE WAY YOU WOULD NEVER FIND AND THEY ARE
PASSWORD WORD PROTECTED. THEY ARE FOR GOOD TECHS. ALL ACROSS
THIS COUNTRY. NOT SOME ASS WIPE RUNNING A SO CALLED C.B SHOP OUT OF
THE BACK END OF A VAN THAT DONT NO A HOT MELT GLUE GUN FROM A SOLDER
IRON. WELL MR. STAN YOU CAN PROVE THIS TO YOURSELF AND OTHERS BY
OPENING UP A RADIO AND ASK CORN DOG WHAT ARE CAPACITORS, TRANSISTORS,
CHOKE'S INDUCTORS. VCO'S, ASK HIM TO EXPLANE THE TUNING TANK
CIRCUIT,REFERENCE& DIVIDER CIRCUIT, SYNTHESIZER CIRCUIT,
ASK HIM ABOUT I-F SELECTIVITY CIRCUIT,THE AUDIO AMP STAGE, OR TX MIXER
CIRCUIT, OR ABOUT THOSE R-F AMP CIRCUIT.THE AGC CIRCUIT. YOU SEE STAN
THIS IS JUST THE BEGINING OF RADIO REPAIR. AND NO COON DOG COULD NOT
TELL YOU ANY OF THIS.COON DOG ONLY NO'ES HOW TO PEAK AND TUNE RADIOS
THE OLD WAY BECAUSE SOMEONE SHOWED HIM ONCE UP ON A TIME.
AND SOME ONE SHOWED HIM HOW TO HOOK UP A CONNEX BOARD AT ONE TIME.
AS FAR AS HIS SWING KITS GO HE TRY'S TO COPY IT FROM OTHER RADIOS HE
HAS SEEN AND HE STILL CAN'T GET THAT RIGHT EITHER.
AND BY NO GOD MEANS WILL COON DOG TELL YOU THAT WHEN HE HAD THE C.B
SHOP AT THE TRUCK STOP WHO HELP HIM SET IT UP AND DO ALL THE REPAIRS
AND HE WON'T TELL YOU THAT HE BROUGHT THE RADIOS TO MY HOUSE EVERY
NIGHT TO BE REPAIRED AND WOULD PICK THEM UP IN THE MORING AND TELL THE
DRIVERS HE FIXED THEM ALL SO YES HE GOT THE CREDIT FOR THEM.
AND WHEN I OPENED MY SHOP UP SO I WOULD NOT TEAR MY HOUSE UP THE
DRIVERS BUTTWO AND TWO TOGETHER AND GUESS WHAT THEY FOUND OUT.
BINGO!!!!!!!!!!!

COON DOG DOES NOT HAVE A BUSINESS LIC. A STATE SALES TAX LIC.
AND HE TELL'S ALL THE DRIVERS HE IS A LIC.TECH. OH MY GOD GIVE ME A
BREAK. SO STAN YOU HAD BETTER PUT YOUR BRAINS BACK IN YOUR HEAD AND
THINK ABOUT ALL THIS REAL HARD. I NO YOU CAN DO IT.

OH YA STAN BY THE WAY I HAVE HAD MY C.E.T LICENSE SINCE SEPT.18 1979
AND YES YOU CAN CHECK THAT ONE OUT , FACTS ARE THE FACTS MY FRIEND.

SO STAN YOU HAVE A GOOD DAY AND YOU HAD BETTER THINK REAL HARD ABOUT
ALL THIS BECAUSE MR. COON DOG IS GOING TO TAKE YOU DOWN WITH HIM REAL
SOON AND MR. PAUL BIRD MAN ALSO.
HAVE A GOOD DAY OR NIGHT AND GOD BLESS

WE ALL KNOW YOU WILL NEED IT.

IM HERE AND HERE IS WILL I WILL STAY HAVE A GOOD ONE

Hey Twisted, where that's that proof of me forging posts? You got a choice. One, demonstrate your ignorance again by posting headers that clearly can't be attributed to me. Or two, LIE, and make something up to cover you behind as usual to divert attention away from the issue above.

1460. Give your dad duct tape for Father's Day

Newsgroup: rec.radio.cb
Date: 2001-06-14 22:34:10 UTC
From: "Scott (Unit 69)" <upplus@hotmail.com>
Message-ID: <3B293BE2.B20136F7@hotmail.com>
Source record: 85607

Here are our top ten uses of duct tape for Father's Day:

10. Remote Control Control: Duct tape the remote onto Dadï¿½s arm so he never has to relinquish remote control use to the wife and kids.

9. Keep the junk mail and bills away by duct taping the mail box shut.

8. A gift necktie made entirely out of duct tape is not only a nifty fashion statement, but also resists stains from Dadï¿½s spilling problem like the dickens!

7. Lower Dadï¿½s receding hairline by applying a strip of duct tape from the forehead to the
underside of chin. When Dad opens his mouth it will pull that hairline right back down into place.

6. Dadï¿½s hairline recession on itï¿½s way down the BACK side of his head? Simply fashion a duct
tape toupee and tape it onto Dadï¿½s dome. Heï¿½ll be able to swim in it, play tennis in it,
even
bowl in it with complete confidence!

5. Cover Dadï¿½s golf club head with duct tapeï¿½the impression that the ball makes in the tape
will
show him why he keeps getting that nasty hook or slice.

4. Soak strips of beef in marinade, then stick the strips of meat on a piece of duct tape hanging
over the kitchen sink (to catch the drips) until it air dries into a tasty beef jerky for Dad to
enjoy at his next poker party.

3. Hereï¿½s another nifty gift idea: Grass Clipping Retrieval Shoes. Simply cover an old pair of
snowshoes with duct tape, sticky-side-out, so Dad is picking up the grass clippings as he mows.

2. Another Bald Dad Hint: If Dad misses that fly-away hair look, duct tape a couple of pigeons
to his head.

And the number one use for Duct Tape this Fatherï¿½s Day:

1. Duct Tape the toilet seat UP!

other top ten lists are posted at: http://www.ducttapeguys.com/topten.html

1461. New name.....

Newsgroup: rec.radio.cb
Date: 2001-06-14 22:43:05 UTC

Message-ID: <SwbW6.92$2E6.7104@nnrp1.sbc.net>
Source record: 85613

Hey folks, I'm thinking of chaning my NG name, and I've narrowed it down to two. They are as follows:

1) Zoloft

2) Paxil

Which has the best ring to it? Hell, if I can ever figure out how to get on the air here, I may even use the name as a handle!

Uh oh, I forgot to put the little trademark thingy beside them! Ah, screw it. I don't feel like opening MS Word.

1462. Alden Electronics

Anyone bought anything from
Alden Electronics
Rosslare Harbour
Co. Wexford
Ireland.

Have you had any problems with the company or export to the UK.
Perhaps customs opening and Confiscating parcels etc?

Thought I'd ask BEFORE ordering from them!

1480. Horse shopping

Newsgroup: rec.radio.cb
Date: 2001-06-15 00:50:25 UTC
From: "Scott (Unit 69)" <upplus@hotmail.com>
Message-ID: <3B295BD1.CC60629A@hotmail.com>
Source record: 85622

A man, who owns a horse stud farm,
gets a call from a friend, who tells him,
"I know this midget with a speech impediment
who wants to buya horse and I'm sending him over".

The midget arrives, and the owner asks
if he wants a male or female horse.
"A female horth", the midget replies.

So the owner shows him one.

"Nith looking horth, can I thee her mouf? "
The owner picks up the midget
and shows him the horse's mouth.

"Nith mouf, Can I thee her eyeth? "
The owner picks up the midget
and shows him the horse's eyes.

"Ok, what about the eerts? "
Now the owner is getting pissed off,
but he picks up the midget one more time
and shows him the ears.

"OK, finally, can I see her twat? "

With that, the owner picks up the midget
and shoves his head up the horse's vagina,
then pulls him out.

Shaking his head, the midget says,
"Perhapth I thould rephrathe that.
Can I thee her wun awownd?"

If our KeyStooge manages to find something illegal about a power supply owned by a man licensed to use it as intended (or a monumental battery charger for all we know), will someone let me know?

The nice man who wrote my Bozo Filter seems to think this version will killfile him. Coming soon to a software shelf near you.

Dick NBK

How in hell would you know about 12 meters?

You do not supress knowlege, not now not ever. To try is right up there with pissing up ropes and pounding sand down a rat hole. Similar information is available at the touch of a search engine. The LTD mod I mentioned came right out of an amateur magazine. There are kits available to do CW thru modded CB rigs; I strongly doubt that came from the brain of an outlaw CBer.

If I could spell it I would call you a Radio-Pharisee.

Dick N&#65533;BK

A couple of questions for you fellas at the A.K.C. Group:

1. Do we REALLY care?
2. Does it REALLY matter?
3. Will we lose any sleep over it?

Don't worry...some day you guy(s) will get a life...or a woman!

>true????? .....head out..........

Not exactly, but if he want's to take it that way that's his business,
not yours. And if I want to think that it's a threat when he says he
is going to beat me like a red-headed stepchild, that's my business,
not yours. Are you beginning to see a pattern here?

I seem to recall the keyklowns whining many times about how talking
about something isn't illegal. Neither me nor the anti's disagreed.

You must be the dumbest person ever to post on this ng.

1. The FBI does not patrol the internet. And any investigation into
what you allege to be a threat will not be done without a formal
complaint. That requires either that you are the person being
threatened or you are his/her legal guardian/attorney. Either way, the
accused has the legal right to confront his accuser. So, pinhead Esq.,
are you moped? or moped's attorney?

2. Assuming that the FBI would even think about such a complaint, the
first thing they would do is take a look at the alleged threat. There
are people every day that tell others how they are going to kill this
person or blow up that building, so by the sheer case-load they have
to throw out anything that says "I'm going to take your picture".
Yeah, I'm sure that qualifies as a high-priority case.

3. They will be looking at my posts, but in order to fully investigate
the complaint, they will look at all previous posts by both parties,
as well as many others just to determine the "atmosphere" of the
newsgroup. They will also see threats made by others, such as 1mangang
(twistie) telling Doug, without any restraint, how he was going to
kill him and his family. Shouldn't you be talking to twist before you
open this can of worms? Because we all know how much he hates the
government meddling in his affairs...

4. Assuming the complaint is properly filed, and they feel it is
severe enough to indict, then the person making the complaint will
need to testify to a judge/jury all about how my particular violation
was so severely harmful. He will also have to tell all about all his
previous posts, which alone will destroy his credibility. He will also
have to explain about running his Collins on 11m, a Federal offense.
And if he want's to have witnesses, they will have to do the same.
IOW, he won't have any witnesses or any credibility.

5. And for the coup de grass (some kind of lawn-care thing), you, and
maybe moped, would probably face charges, both criminal and civil, for

filing a false complaint. There are two people that will bring those charges against you: Me, after I am aquitted, and Frank Gilliland from Issaquah, WA. That's right, dipshit, you got the wrong one. And then you would not only have to pay our attorney fees, but depending on the state, you may be liable for triple damages. Regardless, you can't get out of it with a Chapter 7 bankruptcy.

So go right ahead, cry wolf all you want. I can use the extra cash.

I'll answer it anyway...

> if you were a flatfoot ,
>which post would worry you the most, hmmmm?????

None of them. You forget, this is rec.radio.cb. You hear stuff like
this on the radio more often than in the newsgroup, almost every day
in some areas. So which would -you- take more seriously?

> come on bud. you aint doing
>nothing........i can tell you this.......as sure as the sun comes up, you will
>be hearing from your isp, reguarding this situation, i assure you.....because
>you know why?????

Your assurances are misplaced -- I'm out of the house long before the
normal workday starts. And as far as getting TOS'ed, it really doesn't
matter since I am dropping them when this pay period expires in a few
days, and then I am going with a national service so I can keep up
while on vacation. A couple days doesn't matter.

> because that is what happens when idiots get on the ng and
>act very foolishly..........

Oh, right pinhead, your posts are the epitomy of good behavior. Piss
off, hypocrite.

You know what? Your posts are so deliberately poor in grammer it makes
me think that you might be someone that likes to write a lot. Maybe
someone like twistie! You show all the traits, like problems with
logic and identities. How many people here use words like 'vermin'?
For such poor grammer, your spelling (words that aren't deliberately
mispelled) is pretty good. And you seem to have problems with
prepositional phrases just like twist does. How do you end a sentence,
pinhead? Hmmm.... If I didn't know any better I could swear you were
twist in drag.

Wow, somebody call the "Wah"mbulance! I'm kind of curious. What
motivates a(n) individual(s) to constantly monitor a newsgroup and
"police" the postings of others? This is not an attack, just an honest
inquiry. Those who've read my posts, even Doug, Leland, Aaron, or any
other AKC posters, know that I'm a fairly straight shooter and very
rarely light a match under even the most desrving a$$, much less flame
anyone. I'm just curious as to the motivation. There is an "old guard"
kind of guy on one of the ham NG's that makes me wonder what could've
occured in his life to make him such an "angry" spirit. Lokewise, I'm
curious what begats the likes of the AntiKeyClown_______(fill in the
blank) activity on a NG? It just seems like such a wasted effort that
could better be spent trying to "work it out" amicably.

You know, all these new idiots in the newsgroup remind me of a guy locally that goes from channel to channel stiring up shit to see who he can get to threaten him over the air so he can record it and try to take them to court. He took 2 people to court and the frst time was a blunder and he mostly won the case, the second time we had 75 people in court ready to testify about his character. The judge told him to get out. He still goes from channel to channel to stir the shit up trying to get a good recording.

3. They will be looking at my posts, but in order to fully investigate the complaint, they will look at all previous posts by both parties, as well as many others just to determine the "atmosphere" of the newsgroup. They will also see threats made by others, such as 1mangang (twistie) telling Doug, without any restraint, how he was going to kill him and his family. Shouldn't you be talking to twist before you open this can of worms? Because we all know how much he hates the government meddling in his affairs...
written by Sparky, dazed, knees buckling, bleeding on the ropes, both eyes swollen shut.

"Ha! Can always tell when Sparky is upset, the lies spew from him like blood. Er, you better lay off the drugs and do a search and see who threatened Dogie, it wasn't I or one man gang, or "L" man gang, or Leland, for that matter, Einstein, but of course you already knew that, which is why you would rather say it than post it. Matter of fact, I think I remember the headers came from Dogie himself in a sympathy ploy that failed miserably. You're running scared, chickiehawk,, trying to justify your acts (nobody cares) ,and it appears you're getting the cb greeting courtesy of the Longhorn, champeeeeen barbecuers! BTW, what happened to your home.com posting access? Did you lose it for violating your TOS in some way? You, Leland, and Dogie together have had your merit stripped and your dignity taken away permanently by almost everyone in this ng., despite any knowledge each of you may retain about radio,, for your childish ways, rude behavior, blatant disdain for cbers, insolent replies, and inability to keep on topic. Better use that cb and enjoy it now, break, break, break. Sounds like you have a full plate."

It came from "Supaswangthang". Do some research. The guy even has a web page where he brags about his illegal CB setup.

You will also find that Pinhead aka Curious Dan aka Tappindatass aka Dr.Doolittle has a history of getting screamingly drunk and then getting on the NG and making outrageously violent and graphic threats to people.

Interesting that the NG tolerates him and neveer once complained to his ISP.

I glance at the weather forecast when it's on. I don't have time for TV (or CW). I'm not the one sitting in front of the tube over here. No, Sir, I'm no Couch Potato. I'm always doing something. I don't care about the petty NG arguments. I'm sick of "Anti*" and Gang repeating the obvious. How many times can you ask a speeder to slow down? He keeps speeding. You keep asking, he keeps speeding. He knows it's wrong. Does he stop? I'll keep on using my Texas Stars if I need it to be heard. I only run mobile with stock mikes and stock radios.

Time to go party. It's Friday night. I expect to see 100 stupid posts to filter when I get back. The 10 good posts will be the ones I read. My kill list is large. Saves time!

well this guy is obviously an idiot and if you want to get busted , you can damn sure get it done , if you piss in their corn flakes enough, but if you communicate with them and do what they want you to do, you can certainly aleviate this type of action. the real story is probably how long it took for this type of action to come down. hell , this has probably been going on for years and this guy was probably broadcasting on ham bands. oh well, this fool doesn't seem to understand the game, and it is a game isn't it jerry. but you know, i bet this type of bust just warms the cockles of your pea picken do gooder heart , doesn't it jerry, but you know what, it don't change a thing on two things. number 1, if you ever, and i do mean ever get next to my mobile i will put your ass on hold (of course it all depends on how much adult beverages i have quaffed)and number two, i am not now or ever going to get a license to do what i want on my cb radio good buddy. that is a promise from mr cd that is curious , curious d. and i am back quiet..... .

Trivially simple, Watson. Killfiled Twisty long ago, like Ice Cold, tend to ignore Moparholic, and wouldn't know Pinhead if he drove over my toes on his moped. The pattern is simple.

You, on the other hand, have more incarnations than Vishnu. But the Bozo Filter is slowly eradicating you from my sight so the problem may well take care of itself.

Have a salubrious Saturday.

Message-ID: <9gec2v022db@enews1.newsguy.com>
Source record: 85688

I'm having trouble with background noise in my semi.

Running a plain old, real old, regular CB.

The noise doesn't seem to be coming from the engine.
I've grounded everything twice.
The confusing part is, it happens when the truck is rolling.
The fast the truck, the more noise.
The only time it goes away is when I ride the brakes or
when it's raining.....

Any thoughts ??

Every time you post that thing the price changes... for the longest time you wanted $85 for it, now the price jumps to $90? I like the $30 price tag better... If you are willing to sell it to me for that, I'll gladly buy it... Otherwise, I'll offer you $65 for it plus shipping... Shipping is going to be murder, so it should bring the price right up to about the $85 you were asking for it... Let me know...

You know, for years I've heard about 'tire static'. I've
never run into it before, but maybe you have!!

I've seen thing in books where they sprinkle a
conductive powder in the tires, but it's probably
one of those things that just ain't gonna work.

I wonder... But it's probably a combination of
things, from the tires to the axle grounding....

Hmm, if you lightly ride the brakes, that may be
grounding the wheel. Now, how would you solve
that? With a conductive 'brush' in the wheel
assembly???

Mike

Somehow I doubt it. Not because of some concern for spectrum usage -- as a theoretical construct I have a lot of concern for it and do not advocate freebanding as a practice. It is the practicalities where we differ and in our assumptions about people.

You like to reason from first principles and absolutes. That's fine; it keeps things from becoming unguided rabble parades. Others, and I am one of them, prefer to keep the body count low and the carnage to a ladylike belch. We are necessary to set some kind of perspective on things. The two ideas are nearly mutually exclusive although both are needed to get solutions to problems off the ground. But the two groups have a way of talking by one another and, of course, where conflict becomes of interest in its own right requiring a 'winner' be declared (Northern Ireland is a classic example) the result is long-term stupidity.

Where CB radio is a trivial issue, the whole low VHF spectrum are basically garbage frequencies, the attitude variations are not. To get into two classic areas, consider heroin and abortion.

When we occupied the Philippines in 1899 the missionary brigade noted, correctly, that heroin addiction was rampant (an Army song of the era began, 'In the land of dopey dreams happy, peaceful Philippines). They demanded an international opiate control treaty which is now administered thru a UN group that we just got kicked off of and was enforced by the Harrison Act of 1914. Whatever one may think, the result has been a cyclical return of heroin like sunspots to CB and 17year cicadas. What does a sane human being do about it?

You would declare a war on drugs, preach a lot, and string up minor pushers to the yardarm. Like the campaign to shoot coyotes dating from the 20s, you would end up with a better trafficker, a lot of corruption, a lot of dead addicts, and a lot of crime victims to pay for it. This strikes me as pointless. Macho to be sure but pointless.

Everyone would be a lot better off if the addicts had a source of non-judgmental information on such issues as needle maintenance, how to revive an OD friend, treatment for clapito, and some support in kicking the monkey. Now admittedly the 'helper bees' get so tied up in this sort of thing it is probably necessary to remind them that the object of the game is to reduce the number of addicts and the societal effects of addiction. We had to do that to welfare workers.

As it happens my first job at the age of 15 was in a hospital on the end of a mop handle. During that summer I learned what a D&C was (dilation and curettage, better known as a dusting and cleaning) and in fact how to perform them. Some years later I saw a display of Etruscan gynecological instruments which looked strikingly familiar at the Field Museum in Chicago, along with a gizmo that looked like it was made out of two tablespoons and a bumper jack that sent ladies screaming into the hallway.

No one I know of or ever heard of is pro-abortion. But they have been being performed on each other, themselves, in back alleys, and doctors' offices for 6k years that we know of. So what does one do about it? Muzzling docs and blowing up clinics does not seem to be a productive way to go. Pass laws til your ass sucks wind (they were illegal when D&Cs ranked right behind tonsils and hemorrhoids on the OR schedule) and all you produce is back alley jobs. This is not a theoretical construct, people die. Barring a major change in the human race, they will happen. All you can do is reduce the death toll while trying to make them unnecessary. By and large, we are doing just that with pauses for things like a proposed fetal tissue bill in Nebraska that would have required the state to give up using the Sabin polio vaccine. Someday someone will explain to me why the grand poobahs of pro-life orgs are male, beyond the age of paternity, and wear rimless glasses.

So I prefer to offer some non-judgmental comment on things around here where I think I have something to offer which is not that often. My intent is to have a little recreation and keep the atrocity level to a roar. Most times it is in trying to make sense of CB mythology which has not basically changed since the 70s, particularly about Ancient Modulation. Yes, I have been on the ham bands since Marconi or shortly thereafter: BFD. The amateur service is largely fixed operation on multiple bands where CB is largely a mobile medium on a single band. There is no inherent conflict. There are a lot of CB regs that are flat-assed stupid and have been since about 1959; while I have some understanding of why they are broken I do not advocate it. Neither do I treat them as holy writ.

So our outlooks are not that dissimilar but I am not about to saddle up and charge windmills. In the long run of things, I am a coach and you are a critic.

Another issue appears to be that you in some manner need my approval. Being about as independent as 12 tons of Limberger, I neither need nor want yours. Use your own judgement, don't depend on mine.

Dick N BK

Shunt your antenna to ground with an RF choke in the range of 4 to
10uH, and turn down your RF gain a notch or two. If that doesn't work,
reinstall your antenna, making sure all the connections are tight and
waterproof. Make sure you have proper grounding; i.e, lots of metal.

If that still doesn't work, email me.

So, let me get this straight fellas. You reported THREE Davemades to this guys ISP. Do you ACTUALLY think that the ISP gives a rats-ass? I mean, did they study FCC part 97? Did they look to see if there was a "FCC TYPE ACCEPTED" sticker on the back of the amp? Is his ISP a conglomerate of amateur operators who happen to KNOW the rules? I don't think so! You guy(s) have waaaaay to much time on your hands trying to police the world. Kinda reminds me of the little Dutch boy who has his finger stuck in the dike. It's gonna happen ANYWAY...like it or not! If you're looking for a more time-consuming endeavor, might I suggest either knitting or needlepoint.

Gosh, you should read your ISP TOS sometime. Pay special attention to the part
about "using the service to break federal or state laws" and "using the service
to transact illegal business".

>I mean, did they study
>FCC part 97? Did they look to see if there was a "FCC TYPE ACCEPTED" sticker on

Thanks for regurgitating the classic illegal CBer's argument. The fact that you
bothered to make it proves that you care DESPERATELY that no one pays attenton
to illegal CB. Because if they DO care, your screwed. Your job is to keep
repeating over and over that no one cares every time you run across another
person that does care.

Yeah right. So explain yourself and your philosophy of what CB radio is all about. What's the purpose of "dropping the maul on them all"? Why is that a good thing that we should all support? Why are you better than the people you "drop the maul on"?

HAHAHA!!! That's sooooo funny, stall-mopper! I just can't stop
laughing! HAHAHAHAHA!!!!!!! "puttin 'em ALL in the STALL" HAHA!!!

Seriously now, do you know enough about basic RF to even understand a
question that deals with simple radio-wave propogation? Or do you just
sit there and mumble through your drool about amps and mudducks?

Ok, let's clear this up before it starts:

From: Webster's New World Dictionary, 1963:

law: 1. all the rules of conduct established by the authority of
custom of a thation, etc. 2. any one of such rules. 3.... 7. any rule
expected to be observed.

regulation: 1. a regulating or being regulated. 2. a rule or law by
which conduct, etc. is regulated.

From: Merriam Webster's Collegiate Dictionary, Tenth Edition 1994

law: 1a(1): a binding custom or practice of a community; a rule of
conduct or action perscribed or formally recognized as binding or
enforced by a controlling authority (2): the whole body of such
customs, practices, or rules.... c: a rule or order that it is
advisable or obligatory to observe

regulation: 1: the act of regulating : the state of being regulated
2a: an authoritative rule dealing with details or procedure b: a rule
or order issued by an executive authority or regulatory agency of a
government and having the force of law

If you have any more doubts, email the FCC or the department of
justice. I'm sure they will set you straight.

Go ahead. Divulge all you want. In fact, I challenge you to put up one
shred of irrufutable proof that I am anyone other than who I say I am.
And you -can't- use twistie's standard of proof (anything is true if
he says it's true). You have to use logic and reason, not just
hearsay. Do you think you can meet that challenge?

Better yet, why don't you post ALL the information on me that you have
-- address, phone number, etc. Go right ahead, I won't deny it if it's
true.

Copy of email sent to newsranger.com
==========

I am bringing to your attention the following post from the newsgroup rec.radio.cb.

This post advertises a site that advocates the operation of radio equipment
on unauthorized frequencies or frequencies that are authorized to other services,
and has been declared illegal under Parts 2, 95, and/or 97 of Title 47 of
the US Code of Federal Regulations. The activity that is being advocated
is punishable by fines, imprisonment, or both.

Free and open discussion of this illegal activity encourages others to do
the same, and detracts from the criminal nature of such activities. It also
deceives the public to believe that such activity is legal and/or acceptable
behavior.

Illegal operation of radio transmitters causes interference to radio and
television broadcast stations, and disrupts radio communications for emergency
services and other licensed users. This type of "RF thievery" is analogous
to an internet hacker that can "steal" an IP address, disrupting the peaceful
and legal operation of the internet service provider that has
legal right to that IP address.

I am confident that you will take any action that you feel is appropriate.
Thank you.

Sincerely,

Aaron H. Voobner

Do you mean the verbal, religious, and scientific definitions? Feel
free to post them yourself, but don't forget to include the list of
synonyms. ....oh heck, I'll do that myself:

syn: law, rule, regulation, precept, statute, ordinance, canon -- mean
a principle governing action or procedure. LAW implies imposition by a
sovereign authority and the obligation of obedience on the part of all
subject to that authority <obey the law>. RULE applies to more
restricted or specific situations <the rules of the game>. REGULATION
implies prescription by authority in order to control an organization
or system <regulations affecting nuclear power plants>.......

How deep is your denial of reality?The key word here is 'govern', so
go look it up and post that definition, too.

>I'm not going to debate this with you, Sparkly. I find your behavior in
>this newsgroup to be worse than that of the "freebanders" and
>power-running CB'ers that you are purportedly fighting against.

You won't debate it because there is nothing to debate. You are trying
to distort definitions to suit your own purposes.

>Set an example, for a change, instead of fighting mud with more dirt.
>
>Didn't your mother ever teach you that two wrongs don't make a right?

Speaking of example-setting, name-calling, and mud-slinging, I need to
ask: didn't -your- mother ever teach -you- to think for yourself?

1636. Hey old-timers...

I can't believe you friggin idiots are going to argue the semantics of law Vs regulation. Inject this into your thoughts on the subject. I decide to offer amplifiers for sale on here but what you don't know is that my target market is another country. News groups are international and are read by people all over the world. As different countries have differing regs from those in the US it would put you WAY off base for bitching about amps being sold for 11 meter use.Legal this and illegal that.....Y'all need to shut the fuck up and try having a life.....Summer is about here.....Leave the house and go do something instead of wringing your hands thinking you are going to get somebody in trouble like a tattling little 8 year old

For what reason?
Because you can't afford one?
Get a life dickhead!
The FCC gave up on CB radio years ago and all of a sudden dumbasses like you
are going to real it back in?
Get over it.....You're not that good!

Aw come on, Train. CB amps make not even an attempt to meet ITU standards
let alone those of any country with tech standards at all. There is a
difference between legal and 'not illegal' perhaps but the only places that
willingly accept them don't have electricity and worship sticks.
Can we put this tired old argument to death; the kids are in bed so we
adults can talk.

darn it.....I have newsranger blocked and missed this post so I'll address it now.....Eat shit and die! Who sells what or who's buying is of no concern to you.....You just need a reason to cry like the little child you are. Grow up! Your little click isn't going to even put a dent in what gets sold for CB radio legal or otherwise.
Being in radio as long as I have and knowing the people I know.....It's going to be a long long time before slime like you will ever be able to do a damned thing to anyone selling radio stuff. I have more radio info on CD's and a larger database than most of you clowns would ever dream of and if need be ALL WILL BE PUT ON A WEBSITE. Everything from schematics for amps that we were building in the 70's and 80's to every last page of master editions.....secret cb.....green, gray, black books.....You name it and I got it. Nothing you sleazy little shits can do will EVER stop people from getting information they need. Bet on it!

And do you think you are going to change anybody's mind with your
whiney little diatribes? Physician, heal thyself.

BTW, you take personal checks, right? Mine come back with all kinds of
information on them, sometimes even a thumbprint. I might just order
one of your amps, just to see if it can be modified to be inoperable
on 11m. What's your special this month?

Streetbike trip at is. We leave next week. The CB on the bike that my son is using works just fine. The Cobra Handheld I have works great with the earbud/lapel mic setup. Distance is probably not quite a mile, but that really doesn't matter since we will have cell phones for emergencies. The CB's will work great for our purposes. Thanks to all for your input.

Jealous? Of Train? Throw away that can of spray paint and snort some
nice MEK -- that will finish the job you have already started.

Moon boucing is done in CW (morse Code) as you need a lot of power to
it. To do it right you would probably need about 10,000 ERP watts
from your antennas.

sorry prozac, take a look at the many legitimate amplifier companies that market amps for "export only" because they are illegal in the usa. you can buy one no problem as long as you promise to take it out of the country. henry is one of those manufacturers. since you are challenging me you show me the federal law or regulation that forbids this because if there is one it seems to be ignored by every body legal or not.

4. We first address Petitioner's contention that he should be given the same consideration as three other CB violators in the Melbourne area, where Petitioner resides.
Petitioner's case is different from these other cases. Because those cases involved different CB rule
violations, the cases are not relevant to the instant case. In this case, Petitioner's failure to allow
inspection is an egregious violation that, in and of itself, warrants a high forfeiture. Specifically,
Petitioner refused the Commission agent's request to inspect his radio stations in his residence and
in a vehicle parked beside the front door. The Commission cannot take lightly any person who flagrantly disregards its rules and regulations.

1679. FCC Rules, You cannot advertise for Sale amplifiers

I want to know why Train's good buddy Steven Fowler aka ExportsRus didn t use this as his defense. "Well I was sending them out to Haiti and the Fiji Islands." Who cares what their rules are.

==========

Section 2.815 of the Commission's Rules, 47 C.F.R. 2.815, generally prohibits the sale or offer for sale of radio frequency amplifiers capable of operation on the CB
frequencies. The rule clearly states that, notwithstanding very limited exceptions for licensed
amateur radio operators, external radio frequency amplifiers may not be manufactured, sold,
offered for sale or lease (including advertising for sale or lease), or imported, shipped, or
distributed.

1684. Re: FCC Rules

Newsgroup: rec.radio.cb
Date: 2001-06-16 17:24:49 UTC
From: sparky@cet.com
Message-ID: <3b2b953f.1405420@news.cet.com>
Source record: 85723

On 16 Jun 2001 16:59:28 GMT, rfcop1@aol.com (RFCop1) wrote:

>FCC rule 2.815(c): No person shall manufacture, sell or lease, offer for sale
>or lease (including advertising for sale or lease), or import, ship or
>distribute for the purpose of selling or leasing or offering for sale or lease,
>any external radio frequency amplifier or amplifier kit capable of operation on
>any frequency or frequencies below 144 MHz...

Here's the current revision, which is even more restrictive:

==========

Sec. 2.815 External radio frequency power amplifiers.
(a) As used in this part, an external radio frequency power
amplifier is any device which, (1) when used in conjunction with a
radio
transmitter as a signal source is capable of amplification of that
signal, and (2) is not an integral part of a radio transmitter as
manufactured.
(b) After April 27, 1978, no person shall manufacture, sell or
lease, offer for sale or lease (including advertising for sale or
lease), or import, ship, or distribute for the purpose of selling or
leasing or offering for sale or lease, any external radio frequency
power amplifier or amplifier kit capable of operation on any frequency

or frequencies between 24 and 35 MHz.
Note: For purposes of this part, the amplifier will be deemed
incapable of operation between 24 and 35 MHz if:
(1) The amplifier has no more than 6 decibels of gain between 24
and
26 MHz and between 28 and 35 MHz. (This gain is determined by the
ratio
of the input RF driving signal (mean power measurement) to the mean RF

output power of the amplifier.); and
(2) The amplifier exhibits no amplification (0 decibels of gain)
between 26 and 28 MHz.

==========

So guess what? Just ADVERTISING an amp is illegal!!!! Kinda blows
holes in that 'free-speech' theory, huh Tim? Train? Anybody else?
Sounds like there is a new reason to TOS people....

Well what if I am growing(homebrewing) it Tim, is it still considered a drug (amp), am I allowed to export the seeds (pills) to anyone in another country.
Seriously Tim, If it is illegal to manufacture an amp, which it is, then how could you build one to sell out of the country. Ok so you may say well I bought the amp of someone else who made it. Bingo again it is illegal to sell an amp in the USA so now it is illegal for you to buy this amp from this same person in the USA. The best part of all this Tim, You know he is full of shit when he says this but you Keyclowns will look for any loophole real or imaginary, to try and accomplish the goal.

I love this one, haha He we will sell it to you but you had better use it properly. Still see no disclaimer saying these amps are for export only ::wink wink::

Pricing

3 year warranty on parts & labor when returned to the factory for repair
1 year warranty on tubes (tube manufacturers warranty)
It is the users responsibility to operate this and all amplifiers in a legal manner.

To AOL and Optonline.net,

I am bringing to your attention the following posts (below) from the newsgroup rec.radio.cb. The first is the most recent. I include two others for reference.

This post involves the illegal activity, as per Part 2.815 of Title 47 of the US Code of Federal Regulations, of advertising for sale a radio frequency amplifier capable of operation between 24 and 35 Megahertz. This is an offence that is punishable by fines, imprisonment, or both.

Free and open trade of this type of illegal equipment encourages others to do the same, and detracts from the criminal nature of such activities. It also deceives the public to believe that such activity is legal and/or acceptable behavior.

Illegal operation of radio transmitters and amplifiers causes interference to radio and television broadcast stations, and disrupts radio communications for emergency services and other licensed users. This type of "RF thievery" is analogous to an internet hacker that can "steal" an IP address, disrupting the peaceful and legal operation of the internet service provider that has legal right to that IP address.

Despite being asked to stop, this person "Train" continues to use both AOL and Optonline.net to post illegal items for sale on Usenet. I am confident that you will take any action that you feel is appropriate.

Thank you.

Sincerely,

Aaron H. Voobner

Newsgroups: rec.radio.cb

darn it........I have newsranger blocked and missed this post so I'll address it now..........Eat shit and die! Who sells what or who's buying is
of no concern to you.......You just need a reason to cry like the little child you are. Grow up! Your little click isn't going to even put a dent in
what gets sold for CB radio legal or otherwise.
Being in radio as long as I have and knowing the people I know........It's going to be a long long time before slime like you will ever be able to do

a
damned thing to anyone selling radio stuff. I have more radio info on CD's
and a larger database than most of you clowns would ever dream of and if
need be ALL WILL BE PUT ON A WEBSITE. Everything from schematics for amps
that we were building in the 70's and 80's to every last page of master
editions.....secret cb.....green, gray, black books.....You name it and
I got it. Nothing you sleazy little shits can do will EVER stop people from
getting information they need. Bet on it!

Subject: MOBIL AMP SALE
Date: Sat, 14 Apr 2001 19:09:40 GMT
From: "Train" <cbmods@optonline.net>
Newsgroups: rec.radio.cb

As a public service to the NG, I will be offering to sell mobil amps to
those wishing to buy them. This is not done out of greed but out of
necessity to thwart the losers in the NG who think they have taken over OUR
nice little group and can use it to harass and belittle as they see fit.
To
offer sale of these items is just the thing needed in a public forum to mess
with these nil-minded simpletons. Amps such as Texas Star, Palomar, Cobra,
Messenger, Gray, Galaxy, X-Force and so on. These will be sold for a limited
time and at a VERY small profit IF ANY !

This is not a money thing so much as it is an access thing.

Since these self appointed radio/computer gods have declared knowledge an
illegal thing also, I might just make the entire Secret CB book series
available on CD along with a CD of amplifier schematics for base and mobil
amps. Why is it that when these morons just think they are getting somewhere
in their fight somebody like me comes along and pisses on their parade?
BECAUSE THEY NEED IT AND DESERVE IT!!!!!!!!!

I have no use for or reason to operate legally.
There are thousands of us who will continue to operate as we see fit without regard to whatever some schmuck like you or your little click of over-opinionated morons have to say about it. You can cry all you like but those of us who can, will and those of you who can't......Will continue to cry about it.

i have a ratshack "sports" handheld cb. its the yellow one with the bullet proof case and water resistant gaskets. this radios signal sounds great but it only transmits as far as i can throw it. it has that cheesy rubber ducky antenna so it is no wonder that it is no good. who knows who makes better antennas for handhelds and where can i get one? what is the best range that i can get with a good antenna? will a regular car cb antenna improve matters when compared to a good handheld antenna?

Get a small mobile radio and a K-40 or Wilson 1000. The mobile radio has
an ANL circuit to reduce or eliminate electrical noise. The magnet mount
antenna will provide for some kind of ground plane for the antenna system.

Walkie-talkies at CB frequencies make good paperweights.

You didn't state what kind of Jeep you have, so I can't tell you a good
permanent antenna mounting location. Happy Trails.

Hello Train: Yes these guys can be cruel all right.

Train think of it this way......

While where out rockin & rollin, whistling at pretty girls, having a life, shootin skip, cashin and spendin welfare checks, these guys are recitin rules and regulations.

I'll go with the rock & roll, shootin skip, and pretty girls. Yeah!

No time to do the ng now, I have miss Dinah comin over to BBQ and rock & roll. Whooo hooo! After she gets all liquiored up we shot birds off the cactus. And then carry on........

My answer to this depends on what you are using it for. If you are using it in a vehicle, you;d be much better off using a regular mobile rig and a good antenna like a K-40 or Wilson 500. If you are indeed using it as a handheld for hiking/camping then when stationary (at the camp site) you could use a mobile antenna with a bnc connectr/adapter. I am not sure how well this would work as I believe the antenna needs to be grounded for proper tuning, however i may be wrong in this asumption.

I do also believe there are some hi-gain antennas that might improve the performance of the handheld that will connect to the bnc connector on your radio.

If he is using it off road, I would suggest a moe permenant mount than a
mag mount, I would venture to say that if he is using a classic (cj-5)
that he could mount it right to the roll bar, if using a cherokee type
he could drill a hole in the roof and using some large washers to
stabalize the metal, to use a stud type mount. In our area there is a
large mud boggers club, I have seen their mag mounts get bounced off or
knocked off by low hanging branches. best bet is a perm mount with a
good spring between the actual arial and the stud/mount.

1709. Marketing of radio frequency devices

Newsgroup: rec.radio.cb
Date: 2001-06-16 21:49:25 UTC
From: recradiocbpolice@aol.com
Message-ID: <20010616174925.13774.00008596@ng-ch1.aol.com>
Source record: 85745

2.803 Marketing of radio frequency devices prior to equipment authorization.

(a) Except as provided elsewhere in this section, no person shall sell or lease, or offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any radio frequency device unless:

(1) In the case of a device subject to certification, such device has been authorized by the Commission in accordance with the rules in this chapter and is properly identified and labelled as required by ï¿½ 2.925 and other relevant sections in this chapter; or

(2) In the case of a device that is not required to have a grant of equipment authorization issued by the Commission, but which must comply with the specified technical standards prior to use, such device also complies with all applicable administrative (including verification of the equipment or authorization under a Declaration of Conformity, where required), technical, labelling and identification requirements specified in this chapter.

(b) The provisions of paragraph (a) of this section do not prohibit conditional sales contracts between manufacturers and wholesalers or retailers where delivery is contingent upon compliance with the applicable equipment authorization and technical requirements, nor do they prohibit agreements between such parties to produce new products, manufactured in accordance with designated specifications.

(c) Notwithstanding the provisions of paragraphs (a), (b), (d) and (f) of this section, a radio frequency device may be advertised or displayed, e.g., at a trade show or exhibition, prior to equipment authorization or, for devices not subject to the equipment authorization requirements, prior to a determination of compliance with the applicable technical requirements provided that the advertising contains, and the display is accompanied by, a conspicuous notice worded as follows: This device has not been authorized as required by the rules of the Federal Communications Commission. This device is not, and may not be, offered for sale or lease, or sold or leased, until authorization is obtained.

(1) If the product being displayed is a prototype of a product that has been properly authorized and the prototype, itself, is not authorized due to differences between the prototype and the authorized product, the following disclaimer notice may be used in lieu of the notice stated in paragraph (c) introductory text of this section: Prototype. Not for sale.

(2) Except as provided elsewhere in this chapter, devices displayed under the provisions of paragraphs (c) introductory text, and (c)(1) of this section may not be activated or operated.

(d) Notwithstanding the provisions of paragraph (a) of this section, the offer for sale solely to business, commercial, industrial, scientific or medical users (but not an offer for sale to other parties or to end users located in a residential environment) of a radio frequency device that is in the conceptual, developmental, design or pre-production stage is permitted prior to equipment authorization or, for devices not subject to the equipment authorization requirements, prior to a determination of compliance with the applicable technical requirements provided that the prospective buyer is advised in writing at the time of the offer for sale that the equipment is subject to the FCC rules and that the equipment will comply with the appropriate rules before delivery to the buyer or to centers of distribution. If a product is marketed in compliance with the provisions of this paragraph, the product does not need to be labelled with the statement in paragraph (c) of this section.

(e)(1) Notwithstanding the provisions of paragraph (a) of this section, prior to equipment authorization or determination of compliance with the applicable technical requirements any radio frequency device may be operated, but not marketed, for the following purposes and under the following conditions:

(i) Compliance testing;

(ii) Demonstrations at a trade show provided the notice contained in paragraph (c) of this section is displayed in a conspicuous location on, or immediately adjacent to, the device;

(iii) Demonstrations at an exhibition conducted at a business, commercial, industrial, scientific, or medical location, but excluding locations in a residential environment, provided the notice contained in paragraphs (c) or (d) of this section, as appropriate, is displayed in a conspicuous location on, or immediately adjacent to, the device;

(iv) Evaluation of product performance and determination of customer acceptability, provided such operation takes place at the manufacturer's facilities during developmental, design, or pre-production states; or

(v) Evaluation of product performance and determination of customer acceptability where customer acceptability of a radio frequency device cannot be determined at the manufacturer's facilities because of size or unique capability of the device, provided the device is operated at a business, commercial, industrial, scientific, or medical user's site, but not at a residential site, during the development, design or pre-production stages. A product operated under this provision shall be labelled, in a conspicuous location, with the notice in paragraph (c) of this section.

(2) For the purpose of paragraphs (e)(1)(iv) and (e)(1)(v) of this section, the term manufacturer's facilities includes the facilities of the party responsible for compliance with the regulations and the manufacturer's premises, as well as the facilities of other entities working under the authorization of the responsible party in connection with the development and manufacture, but not marketing, of the equipment.

(e)(3) The provisions of paragraphs (e)(1)(i), (e)(1)(ii), (e)(1)(iii), (e)(1)(iv), and (e)(1)(v) of this section do not eliminate any requirements for station licenses for products that normally require a license to operate, as

specified elsewhere in this chapter.

(i) Manufacturers should note that station licenses are not required for some products, e.g., products operating under part 15 of this chapter and certain products operating under part 95 of this chapter.

(ii) Instead of obtaining a special temporary authorization or an experimental license, a manufacturer may operate its product for demonstration or evaluation purposes under the authority of a local FCC licensed service provider. However, the licensee must grant permission to the manufacturer to operate in this manner. Further, the licensee continues to remain responsible for complying with all of the operating conditions and requirements associated with its license.

(4) Marketing, as used in this section, includes sale or lease, or offering for sale or lease, including advertising for sale or lease, or importation, shipment, or distribution for the purpose of selling or leasing or offering for sale or lease.

(5) Products operating under the provisions of this paragraph (e) shall not be recognized to have any vested or recognizable right to continued use of any frequency. Operation is subject to the conditions that no harmful interference is caused and that any interference received must be accepted. Operation shall be required to cease upon notification by a Commission representative that the device is causing harmful interference and shall not resume until the condition causing the harmful interference is corrected.

(f) For radio frequency devices subject to verification and sold solely to business, commercial, industrial, scientific, and medical users (excluding products sold to other parties or for operation in a residential environment), parties responsible for verification of the devices shall have the option of ensuring compliance with the applicable technical specifications of this chapter at each end user's location after installation, provided that the purchase or lease agreement includes a proviso that such a determination of compliance be made and is the responsibility of the party responsible for verification of the equipment. If the purchase or lease agreement contains this proviso and the responsible party has the product measured to ensure compliance at the end user's location, the product does not need to be labelled with the statement in paragraph (c) of this section.

(g) The provisions in paragraphs (b) through (f) of this section apply only to devices that are designed to comply with, and to the best of the responsible party's knowledge will, upon testing, comply with all applicable requirements in this chapter. The provisions in paragraphs (b) through (f) of this section do not apply to radio frequency devices that could not be authorized or legally operated under the current rules. Such devices shall not be operated, advertised, displayed, offered for sale or lease, sold or leased, or otherwise marketed absent a license issued under part 5 of this chapter or a special temporary authorization issued by the Commission.

(h) The provisions in subpart K of this part continue to apply to imported radio frequency devices.

[62 FR 10468, Mar. 7, 1997, as amended at 63 FR 31646, June 10, 1998; 63 FR 36597, July 7, 1998]

1710. Bowling Green Hamfest/Computer Show

Newsgroup: rec.radio.cb

Is anyone here planning on attending the Hamfest in Bolwing Green Ohio on July 8th? I will be going, it is only 20 minutes from my house, I plan on taking my tech exam then, and if I can get enough time on code practice I will take the code exam at that time as well. The cost of the VE exam is like $8 now right?

If anyone is going drop me a line maybe we can get together for a coffee and chew the rag for a bit eh?

We got this GREAT little company down here in Tennessee that makes a wonderful product and markets this product all over the world all the while they can NOT sell it right here in the county where it was made.
JACK DANIELS!

Lynchburg, TN is in a "dry county".

>Legal Cb radio rules!

Lets start with Ameritron and we could move on to Kenwood, Yaseu, Icom....
Going to older units....
Drake, Heathkit, Collins, Halicrafters, and so on.
Your done with that excuse drug boy.

Absolutely right Dick. Trivial laws are meant to be broken. No one gives
a rats ass about CB anyway. You can get away with anything for the right
price. Money talks. Besides, theres rules and laws and the two are different.
Rules you don't obey if you don't choose to. Those dopes should worry about
other things besides CB.

I defy you to find one person in this NG that will HONESTLY come forward and
claim that I sold them an amp!
YOU CAN'T DO IT!
